... Wis.: The wheat movement ... steadily and receipts this week ... daily, chiefly from Minnesota and Dakota. Minneapolis millers have sold considerable of their surplus, owing to the high prices of wheat compared with flour. This difference will be increased 20c. per barrel next week, when rail freights advance 10c., and the close of navigation stops shipments by lake (and rail) from Iowa and Nebraska. The movement is light, farmers having sold freely during the fall. If the relative prices of wheat and flour in this market are sustained Milwaukee millers will shut down. Daily production this week 3,800 barrels.

From Minneapolis, Minn.: The weather has been favorable for threshing and marketing grain during the entire week, and has been improved by the farmers. The elevator capacity in this city is full, and millers are now filling the St. Paul elevators. At the present rates of delivery they will be full in ten days. There is in store in the houses of the different elevator companies having headquarters in Minneapolis (with that in St. Paul) 8,000,000 bushels of wheat. Minneapolis millers are holding about 6,000,000 bushels. The receipts from this time must be limited to the daily consumption of the mills, except small lots shipped out to country mills. The market has ruled steady and fairly active, but closes dull at 98@99c. for No. 1 hard. The mills are mostly running, and report a fair demand for flour, but low prices.

From San Francisco, Cal.: Wheat is firm at $1.85 per cental. Exchange 15c. premium.

From Baltimore, Md.: Flour is quoted dull, with but little inquiry and only firm. The local trade is for daily wants only. The wheat market is quiet and easy with slow inquiry.

From Wilmington, N. C.: Breadstuffs are in limited demand and prices are steady, and grain is depressed.

From Savannah, Ga.: Flour is firm with fair demand; grain steady, and the markets are well stocked for the demand.

From New Orleans, La.: In grain little is doing, corn is 53½c.; wheat is $1.10½. Receipts corn are 70,000 bushels; exports, 35,000; stock, 300,000. Flour is dull and the supply large.

WINTER WHEAT.

From Louisville, Ky.: Winter wheat shows a fair average and is in good condition.

PROVISIONS.

The arrival of hogs at the west during the week has been very heavy. In the earlier days of the period under discussion this exercised a depressing influence on prices. Later, however, quotations rallied. The export demand holds well up, and the quantity going abroad shows a greater excess as compared with over one-half of November in 1882. The home trade is also of fair proportions. Packers have been buying hogs freely, and to those influences is attributed the major portion of the advance in prices. There was a gain in price due to manipulation, but it was lost again. On the concluding days of the week there were increased gains and some reaction. On the whole, there was a net appreciation in value.

The following shows the export of hog products for the week ending November 17, 1883:

	Pork, barrels.	Bacon and hams, pounds.	Lard, pounds.
New York	5,309	4,626,850	6,263,899
Boston	828	620,993	497,839
Portland	2	....	319
Montreal	318	1,022,000	280,015
Philadelphia	....	500,000	....
Baltimore	237	2,693	8,750
New Orleans	110	900	2,310
Totals	6,804	6,773,436	7,053,132
Previous week	5,162	5,979,935	4,470,957
Two weeks ago	6,530	6,539,132	2,827,209
Cor. week in 1882	4,022	4,870,462	4,578,485

Comparative summary of aggregate exports from November 1 to November 17, 1883:

	1883-84. pounds.	1882-83, pounds.		1883-84. pounds.
Pork	3,699,200	2,349,000	Inc.	1,350,200
Bacon	19,291,603	9,905,398	Inc.	9,386,205
Lard	14,351,298	14,503,882	Dec.	152,584
Totals	37,342,101	26,758,280		.....

The prices for leading hog products in New York on the days named were:

	15th.	16th.	17th.	19th.	20th.	21st.	22d
Lard, west. spot.	7.90c.	8.02½c.	7.90c.	8.00c.	8.10c.	8.00c.	8.00c.
Lard, Nov.	7 80	7.87	7.85	7 87	8.00	7.85	8 05
Lard, Dec.	7.80	7.87	7.84	7.84	7.90	7.84	8.08
Pork, mess, spot.	$12.00	12.00	12.00	12.00	12.00	12.00	12.25

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The recent warm weather has retarded pork packing.

From Chicago, Ill.: Pork is active and excited; it advanced 30c. on demand to cover by the shorts. Noon: The advance on the last movement upward was made by the bulls to sell, and lard is active and has advanced in sympathy with pork. Later: Lard lost the advance and the demand is chiefly to cover by the shorts. Shippers are not buying. Short ribs for November are cornered 1c. over December. January is active on speculative account and prices are advancing. Hogs are active and firm on decreased receipts. Cattle are active and firm. Choice shipping are scarce.

From Peoria, Ill.: Prices for hogs are lower than last year and a brisk season anticipated.

From Louisville, Ky.: Provisions are firm; hogs are active and lower. Pork packing is hampered by the mild weather.

From St. Louis, Mo.: Provisions are firm and fairly active, with the general tendency upward. Packing is brisk but does not equal the demand for young meats. Hogs are in very large receipt, of good quality and sell lower. Cattle are dull and unsteady and in rather small offering.

From Kansas City, Mo.: Provisions are steady and the demand is active. Cattle receipts average the same as in the previous week, chiefly range cattle of common quality. The market ruled active and firm until Tuesday, when range cattle declined 10 to 15c., followed by a decline of 10c. more on Wednesday; natives are also somewhat lower. Hog receipts are largely increased. Values are strong, with a downward tendency, closing 15c. lower than last week. The market is fairly active.

From Topeka, Kan.: Shipping steers are in unlimited offering; but butcher's stock and hogs are in good supply.

From Savannah, Ga.: Provisions are in good demand. Bacon is easier.

From New Orleans, La.: Provisions are firm and the stock small.

DRY GOODS AND CLOTHING.

The regular fall season for general dry goods closed some three weeks ago and the present trade is mostly in packages. Business at this time as compared with last year is fairly satisfactory. But the opinion is advanced that, as a rule, some larger houses anticipated a much better trade than has been realized and that considerable stocks has been carried over in consequence. The tendency among dealers now is to do a more conservative business. Collections have been good and prospects are fair for the coming season. Out-of-town trade is mostly for current wants. Country merchants are not at present anticipating wants. Some merchants are doing a fair business in fancy goods.

The wholesale clothing trade season at New York virtually closed about three weeks ago. There is no material change in the trade of the past week as compared with last, and business, which is always dull at this time, is about as active as at the like period last year. Dealings are mostly in small lots taken by dealers as wanted. Out-of-town trade is merely to supply the current demand, not sufficient time having passed for merchants to work off any amount of the stock purchased during the season. The prospects are for a continuance of the present situation until next season opens. Collections at the south are reported good.

The recent period of mild and unseasonable weather has resulted in an appreciable falling off in orders both for dry goods and clothing. The large retail houses in New York have felt it particularly.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Dry goods are in some better demand than last week.

From Boston, Mass.: Retailers have had a few good days, but the jobbing and package departments have been dull, and the dry goods business generally must be reported slow for the season. Dealers say they do not expect any animation until cold weather sets in, and are waiting quietly for developments.

From Providence, R. I.: The print cloth market is steady; 64s are quoted at 3½c., and 56x60s at 3⅜c. The cotton market is quiet. Middling uplands are worth 10⅞c., and middling gulfs 11⅛c.

From Philadelphia, Pa.: The market has ruled quiet. Unseasonably mild weather has interfered with sales for immediate consumption, and neither jobbers nor converters have evinced much disposition to anticipate spring wants. Some "cutting" under regular prices is reported on cotton goods among jobbers. The general market for cottons is rather weaker, as stocks of a good many makers are accumulating.

From Pittsburgh, Pa.: The dry goods trade is satisfactory for the season. Collections good.

From Cincinnati, Ohio: The dry goods market has improved. The volume of trade is relatively larger and prices are unchanged.

From Cleveland, Ohio: The jobbing business in dry goods and notions here will now probably gradually decrease each week, with the exception of a short busy time before the holidays.

From Chicago, Ill.: Dry goods are selling fairly on orders. Calls include staples and fancies, dress goods being in good request, but sales are in small lots. Millinery, notions and furnishing goods meeting a fair demand for the season, but scarcely equal to last week.

From Peoria, Ill.: The dry goods movement is satisfactory, with good collections, and indications of a light stock in the country.

From Detroit, Mich.: In dry goods jobbers report a fair amount of mail orders, but the house trade noticeably light.

From Louisville, Ky.: Dry goods are in fair distribution.

From St. Louis, Mo.: Heavy dry goods maintain a fair activity at steady values.

From Kansas City, Mo.: Dry goods experience a renewed activity. Sales are unusually large for the season. There is a brisk demand for heavy goods.

From Topeka, Kan.: Dry goods merchants have a fair trade for seasonable goods.

From Minneapolis, Minn.: Dry goods houses report a good order trade, but mainly of the sorting-up character.

From San Francisco, Cal.: Dry goods have shown more activity. The retail display of holiday goods begins with light sales.

From Baltimore, Md.: Jobbers say the dry goods market is devoid of animation. Stocks in the country are reported full, and the few orders that come to hand are small, the tendency being to purchase only enough for immediate wants.

From Norfolk, Va.: Dry goods jobbers are not now so actively engaged.

From Savannah, Ga.: Dry goods are unchanged in price and without new features. Collections are fair.

From Galveston, Tex.: Dry goods are dull, with only moderate collections. New York exchange one-quarter discount.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The wholesale clothing trade is passing through its quiet season, and no movements of importance are expected for some weeks to come. Fall stocks are running quite low in manufacturers' hands, and the situation is satisfactory so far as they are concerned. Retailers are looking anxiously for cold weather, as the present mild spell has stopped the overcoat trade, and, of course, will not buy any more until there is a favorable change.

From Cleveland, Ohio: The retail trade improving in clothing, which is very active.

From Pittsburgh, Pa.: In clothing an average trade is reported. Mild weather exerts a depressing influence.

From Lawrence, Kan.: The clothing trade is well sustained.

From Minneapolis, Minn.: There is a large trade in heavy clothing and fur goods.

From Savannah, Ga.: Clothing is backward on account of warm and dry weather.

COTTON.

The spot cotton market at New York for the week ending last night has been quiet and steady. Sales have been light and in small lots, the demand being very moderate. Quotations closed last night at 10½c., an advance of 1/16c. over the closing price last Friday. The sales for the week have been as follows: For export 212 bales, for consumption 1,583 and for speculation 2,400 bales. Included in the above are 1,300 bales to arrive. The deliveries on contract amount to 1,700 bales. The total sales aggregate 4,195 bales, against 3,951 bales last week.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	Last week.	Last year.
Ordinary	8¼c.	8 3-16c.	8c.
Strict ordinary	8¾	8⅝	8 7-16
Good ordinary	9 9-16	9½	9¼
Strict good ordinary	9⅞	9 13-16	9 11-16
Low middling	10⅛	10 1-16	10⅛
Strict low middling	10 5-16	10¼	10⅜
Middling	10½	10 7-16	10 9-16
Good middling	10¾	10 11-16	10 13-16
Strict good middling	10⅞	10 13-16	11
Middling fair	11⅜	11 5-16	11⅛
Fair	12⅛	12 1-16	12¼

STAINS.

	This week.	Last week.	Last year
Good ordinary	7⅜	7 5-16	7⅜
Strictly good ordinary	8⅝	8⅝	8 7-16
Low middling	9¼	9 3-16	9⅛
Middling	10⅛	10 1-16	10 1-16

The market for spot cotton closed firm.

The market for futures has been dull but steady. Business has been slow, the closing quotations last evening showing an average advance of 15 points for November and December and 5 for all other months. The total sales for the week aggre-

gate 376,800 bales against 454,900 last week and 747,200 for the same week last year.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
November	10.65	10.46	10.49
December	10.65	10.55	10.31
January	10 74	10.70	10.35
February	10.88	10.85	10.45
March	11.03	11.00	10.56
April	11.16	11.13	10 67
May	11.28	11.24	10.78
June	11.40	11.36	10.89
July	11.52	11.47	11.00
August	11.62	11.57	11.10

The market for futures closed steady.

The southern markets have been quiet and firm. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	*To-day.*	*Last year.*
Galveston	11,582	10 1-16	10
New Orleans	55,900	10⅛	10
Mobile	5,150	10	9⅞
Savannah	21,300	10	10
Charleston	5,600	10¼	10¼
Norfolk	14,269	10 3-16	10 3-16
Baltimore	1,325	10¼	..

The total receipts of cotton at the ports since September 1 are 2,143,483 bales against 2,119,484 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	310,611	321,396
New Orleans	631,021	473,738
Mobile	116,978	140,171
Savannah	387,500	400,349
Charleston	251,509	274,773
Wilmington	55,723	54,703
Norfolk	266,879	315,665
Baltimore	10,170	5,737
New York	10,598	22,098
Boston	21,380	40,457
Philadelphia	5,228	15,553

The total receipts for the week were 219,496 bales, against 240,027 last week, and 239,357 for the same week last year.

The receipts at the twenty-four interior towns usually reported were about 97,000 bales, against 104,004 bales last week and 115,115 bales for the corresponding week last year. The shipments for the week were 92,950 bales, against 77,615 bales last week and 114,061 bales for the corresponding week last year. The stocks for the week were 324,689 bales, against 311,188 last week and 220,073 for the same week last year.

Below will be found the receipts at each of the ports for the week ending November 23, 1883, with comparisons for last week and the same week one year ago:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	6,584	7,891	2,980	3,608	4,270	2,842
New Orleans	6,178	23,932	10,972	5,885	18,817	11,886
Mobile	3,007	3,036	3,353	1,259	1,261	1,358
Savannah	4,118	5,232	5,234	4,780	4,207	4,898
Charleston	2,486	2,891	2,131	3,179	2,003	2,703
Wilmington	430	1,022	510	904	709	980
Norfolk	4,201	4,805	3,903	6,401	6,047	5,888
Baltimore	316	18	....	451	250	114
New York	464	173	878	480	1,317	351
Boston	1,000	748	1,065	807	1,006	1,084
Philadelphia	....	....	....	....	196	....
Totals	28,874	49,753	31,036	27,844	40,083‡	32,164
This day last week	33,605	57,151	31,185	32,152	31,871	38,593
This day last year	38,895	47,154	36,401	31,993	36,048	38,778

The market at Liverpool for prompt delivery uplands has been firm. Quotations show an advance of 1 point for the week, closing last night at $5^{15}/_{16}$d., against 5⅞d. last week.

Futures have been dull. All months' closing quotations show an average advance of 2 points.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
November	5 63-64d.	5 60-64d.	6d.
November-December	5 60-64	5 58-64	6 5-64
December-January	5 59-64	5 58-64	5 61-64
January-February	5 60-64	5 58-64	5 60-64
February-March	5 63-64	5 60-64	5 60 64
March-April	6 1-64	5 63-64	5 62-64
April-May	6 3-64	6 3-64	6

The market for futures closed barely steady.

The sales for the week at Liverpool were 88,000 bales (of which 59,000 were American), against 84,000 (of which 51,000 were American) last year. The sales for export were 3,000 bales, against 11,500 bales last year. The sales for speculation were 2,300 bales, against 2,800 bales last year. The amount forwarded was 17,000 bales, against 11,500 bales last year. The stock in port is 432,000 bales (of which 231,000 are American), against 485,000 bales (of which 220,000 were American) last year. The total imports for the week were 104,000 bales (of which 80,000 were American), against 90,000 bales (of which 75,000 were American) last year, and the amount afloat 289,000 bales (of which 239,000 are American), against 288,000 bales (of which 225,000 were American) last year.

The Manchester market closed firm.

The Havre market closed quiet and steady.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The movement continues moderate, but the market rules firm at unchanged prices.

From Cincinnati, Ohio: The cotton market has improved, with good demand for lower grades. Prices have advanced slightly on low grades. Stocks on hand are fair. Receipts to date are less than last year.

From Louisville, Ky.: Cotton receipts are fair. The market is firm and the inquiry good.

From St. Louis, Mo.: Cotton is firm and a little more active, but no eastern spinners are in this market, and the demand is almost entirely on foreign orders.

From Norfolk, Va.: Cotton continues to come in freely.

From Baltimore, Md.: There is no activity in the cotton market.

From Wilmington, N. C.: Cotton shows a fair business doing. Receips will show a falling off from November last year.

From Savannah, Ga.: Cotton receipts are coming in slowly, and the stock on hand will not exceed 100,000 bales. The market is inactive but firm, and the feeling is for an advance in prices. Factors are holding for full values.

From New Orleans, La.: Cotton crop estimates here are about the same. It is believed that receipts will soon lessen considerably. Prices for distant months are regarded too high, but the present months and spots are thought reasonable. Spots have advanced $^1/_{16}$c., and futures declined from 1 to 4 points. The movement of the former is liberal, and of the latter fair.

WOOL.

The general situation shows little change from previous reports. The demand for consumption is moderate and apparently proportioned very closely to immediate requirements, but the movement in the aggregate is fair, and there is no indication of weakness in the market. On the contrary, the position as regards values is very firm. The unsatisfactory condition of the goods market and the depression in certain industries, which is a disturbing element in the general business situation, naturally promotes caution among buyers, and if the usual supplies of wool were available it is probable that these adverse influences would be felt in a gradually weakening of values toward the turn of the year; but the meagre stocks in sight give confidence to holders, and values are not only maintained with exceptional firmness but show some tendency to improvement on certain grades which are getting scarce. In some cases ½c. per pound more has been realized this week for fine washed fleeces. Here and there the mills are represented as slowing up preparatory to stock inventories and repairs, but, as a rule, production continues uninterrupted. Advices from all wool markets at home and abroad are favorable to the selling interest. The colonial sales in London are progressing with spirited competition among English and continental buyers, and the rates established at the previous auctions are well maintained. In Liverpool, at the East India auctions, a slight advance is noted on white wools. Reports from Australia are very firm. It is expected that about 12,000 bales will be shipped from that country in execution of American orders.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The demand for wool has been steady, the sales of the week amounting to 2,282,500 pounds of all kinds. The transactions in Ohio and Pennsylvania have not been to any extent, but full previous prices have been obtained, and we quote X at 36@38c., XX at 38@40c., and XX and above at 41@42c. per pound. Michigan X fleeces have been in fair demand at 34@35c. per pound, and good average X is firm at 35c. per pound. Combing and delaine fleeces are scarce and firm. Prices range from 39@42c. for fine delaine and 44@45c. for No. 1 combing. Unwashed wools are steady and have been in fair demand at the usual wide range of prices. California wool is quiet, with sales of 100,000 pounds fall at 11@12c., and 100,000 pounds defective spring at 20c. per pound. Pulled wools have been in fair demand at 23@38c. for common and good supers, and 40@43c. for choice. Australia wools are selling at about 40c. per pound, but all kinds of foreign are quiet.

From Philadelphia, Pa.: Transactions for the week foot up about 600,000 pounds, a moderate business; but prices are stiffly maintained, owing to light stocks. An advance of ½c. has been paid for choice Ohio fleeces.

From Cincinnati, Ohio: There is little wool in the market, and a steady demand for medium grades. Receipts are light and prices unchanged.

From Chicago, Ill.: Wool is steady, with a slightly better feeling.

From Louisville, Ky.: Wool is dull, but firm.

From Savannah, Ga.: Hides and wool show some activity. Receipts of dry flints and dry salted are fair.

IRON.

American pig iron continues to be quoted at $20.50 for No. 1 X, $19.50 for No. 2 X, and $18.50 for grey forge iron. There is very little of No. 1 in the market. Prices are no weaker, yet buyers continue to hold aloof and supply their wants by piecemeal lots as required. No special mention has been made of late of further blowing out of furnaces. The number of pig-iron furnaces in blast the 1st of January was 417; the 1st of November, 331. On the 1st of January there were 383,655 gross tons of pig iron in the hands of makers and agents. By the 1st of July the quantity had increased to 528,590 gross tons. November 1 there were 432,354 tons unsold, against 528,590 on July 1. On the 1st of the current month there were no stocks of pig to speak of in the hands of speculators. Thus, not only have furnace stocks been reduced 20 per cent. in four months, but the iron has gone into consumption instead of into the hands of those who buy to hold for an advance. Of the quantity on hand November 1, 145,003 tons were charcoal iron, 158,521 tons were anthracite and 128,830 tons were bituminous iron. The heaviest decrease was in bituminous iron, 65,000 tons; that in anthracite was 28,000 tons, and of charcoal but 753 tons. This review of the situation is most favorable for makers. The blowing out of furnaces has caused the loss of stocks, the end sought. On January 1 last there were 417 furnaces in blast and 270 out. On June 1 the number in blast was but 351, or 66 less in the five months' time. On July 1 the number in blast was but 334, or 83 less than on January 1. November 1 the total number in blast was but 331, or 86 less than on January 1, and 3 less than July 1. It is considered probable by those who are well informed in the trade that present prices for American pig will be shaded from their present level before they are advanced. It is not true, as has been published, that no Scotch pig iron is being brought here except on orders. The arrivals are small for the past week; they will not aggregate probably over 1,000 tons. The sales are light. None of that coming in was stored. Prices of pig in Scotland are lower, with one exception, than they have been before in thirty years. The raw iron trade in Europe is quite as dull as in the United States, the total output of pig for the world having increased considerably over 100 per cent. in 20 years. With Scotch warrants at 44s., and freights from Glasgow here at 5s., it is not probable that Scotch can be laid down in New York much more cheaply that at present. Manufactured iron is unsettled and very dull. Bar is selling under 2c. at the mill. Some mills have cut down to half time and others altogether. The best demand for shapes is perhaps for structural iron. Plates and sheets are in light request. Steel rails possess no new features. Prices are still $35 per ton. Talk of shading their figure is premature. About 150,000 tons have thus far been contracted for at $35. The iron trade as a whole is very dull. It is in a waiting attitude. So long as prices exhibit an inherent weakness it is doubtful if a recovery will take place.

THE AMERICAN IRON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Gray forge is stronger and more active. For large lots, to be delivered after January 1, an advance is asked of 25@50c. for certain standard brands. Foundries are weak and dull. Muck bars quiet and weak at 33@34c. Blooms move slowly in small lots. The merchant bar card rate is down to 2.10c., but plenty of iron is selling at 2c. and under. Plate and tank are less active and weaker. Structural shapes are in fair demand. No large lots of steel rails are selling.

From Pittsburgh, Pa.: There has been no improvement in the condition of the iron market, and none is expected in the immediate future. Mills are running light, and demand and prices continue unsatisfactory.

From Cincinnati, Ohio: The iron market is without new features. The supply is ample. Prices have been well sustained as a rule. Manufactured iron is unchanged, with a liberal consumptive demand.

From Cleveland, Ohio: Pig iron is in the same condition as last reported, and no change is looked for this year. Trade in manufactured iron is fair. Nails are quoted lower and the production too large. The steel rail mills are about to close for a time, the demand being light and there being no profit at present prices. Many men will be thrown out of employment.

From Chicago, Ill.: Bar and all other classes of refined iron are selling slow in small lots. Jobbers say prices have struck bottom, and predict a better trade after the first of the year. Pig iron is slow and without features of encouragement for the near future, but light stocks and low prices prevent pressure to sell desirable makes except for cash, and such buyers are scarce.

From Louisville, Ky.: Iron is quiet and easy.

From St. Louis, Mo.: All lines of iron continue in considerable demand, with no special change in quotations, though some uneasiness is manifest among manufacturers as to the rate of output.

From Detroit, Mich.: The iron market is comparatively stagnant and the demand light. Prices are regular.

THE HARDWARE MARKET.

[By Telegraph to BRADSTREET'S.]

From Pittsburgh, Pa.: Hardware dealers expect a quiet time until the opening of spring, but report an average season's business at very light profit.

From Chicago, Ill.: Hardware, metals and tinners' goods are slow. Nails are in light request; prices unchanged.

From Columbus, Ohio: Hardware appears to have no cause for complaint.

From Minneapolis, Minn.: An active trade is noted in hardware.

COAL.

The anthracite market is duller than it was last week. The warmer weather is, doubtless, in part responsible for this, but when the fact of increased dullness is considered in connection with the prevalent shading in current schedule rates—in excess of the nominal cuts in prices which are or may as well be expected—the situation is declared by many in the trade to call for heroic treatment. This sort of action in this line of trade means enforced restriction of production at the mines. In this view of the situation, then, there is considerable agitation of the former proposition for a reduction of working time in December. There are those who advocate less than half time. No action has yet been taken. The total output of anthracite coal in October was 3,426,272 tons, against 2,945,037 tons in October, 1882, an increase of 481,235 tons. For ten months of 1883 the total production was 26,461,792 tons, against 23,723,283 tons in ten months of 1882, a net gain this year to October 31 of 2,738,508 tons. The stock of coal on hand at tide-water shipping points, October 31, 1883, was 604,865 tons; on September 29, 1883, 538,490 tons; increase, 66,375 tons.

CINCINNATI COAL MARKET.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The coal supply, owing to the height of the river, is excellent, and receipts are large. Prices are nominally unchanged.

PETROLEUM.

The past week has shown some advance over the best figures of last week in speculative petroleum markets, and is due to the continued existence of the bullish fever, dependent, as heretofore pointed out, on the gradual draining on stocks and on the very evident decline in production. Saturday showed no material change in prices for pipe-line certificates. On Monday the market was dull, and sales helped the net decline of 1c. Tuesday, however, brought a reaction, and prices gained 2c. over the closing quotation on Monday. Wednesday's fractional decline was due to the coming in of Porcupine Oil Company's well No. 13 with a good flow of oil. It had previously been announced dry. This gave somebody a chance to shave both ways during the day. Thursday brought news of its rapid decline and another advance set in, touching $1.19⅞ at New York and $1.20 at Oil City. The closing price here was $1.19¼.

On Friday the Balltown and Cooper tract productions were reported to be smaller than ever. The bullish feeling was stronger than ever. A slight reaction was scored, however, owing to free sales to realize. The outlook for the week is for a further advance.

The following shows the fluctuations in prices of pipe-line certificates at New York during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, November 17	1.17¼	1.17¾	1.16⅞	1.17
Monday, November 19	1.17	1.17	1.15¾	1 16
Tuesday, November 20	1.15⅞	1.18	1.15⅞	1.18
Wednesday, November 21	1.18¼	1.19	1.17¼	1.17½
Thursday, November 22	1.17½	1.19⅞	1.17⅛	1.19¼
Friday, November 23	1.19¼	1.19¼	1.18⅛	1.18¾

Refined oil was relatively in light request on Saturday, Monday and Friday, exporters having taken wheat they wanted for the time being at full figures. On Wednesday there was a further demand and the market was quoted firmer. On Thursday holders of refined had no oil for sale, although figures were not marked up. Crude in barrels and case oil has continued in moderately active demand. Quota-

tions of the same and on naphtha have not been altered.

Prices with comparisons at the close of preceding weeks were last evening :

	Oct. 26.	Nov. 2.	Nov. 9	Nov. 16.	Nov. 23.
Certifi's, crude..	1.10⅜	1.09	1.12	1.17½	1.18¾
Refined, 110°....	8⅛	8⅜	8⅜	8⅞	8⅞
Refined, 70°.....	8½	8½	8½	9	9
Crude, in bbls...	7½@8	7½@8	7½@8	7⅜@8¼	7¾@8¼
Case, plain.....	10⅛	10⅛	10⅜	10⅜	10⅜
Naphtha.....	6	6	6	6	6

The export of petroleum from the United States, crude equivalent, for the week ending November 17, was 16,348,358 gallons, against 13,290,000 in the preceding week. The total export from the United States since January 1 was 577,745,798 gallons, against 562,392,900 gallons in the corresponding portion of 1882, a gain in the current year of 15,352,898 as compared with the gain of 12,631,539 gallons reported last week. The exports from New York, for the week ended November 17, amounted to 12,665,991 gallons, and for the year from January 1 to 473,587,281 gallons, against 441,662,032 gallons in a corresponding portion of 1882, showing a net increase from New York alone of 31,925,249 gallons exported between January 1 and November 17, 1883, as compared with ten months and seventeen days' shipments last year.

OCEAN FREIGHTS.

During the greater part of the week the market for charters has been very firm owing to a scarcity of tonnage. This was particularly noticeable for oil vessels. Shippers were not anxious to create much of a demand in the existing scarcity of tonnage owing to the firmness of present rates and the probability that figures would be advanced at the first move in that direction. There has been a restricted movement in grain also. The regular British and continental steam lines have taken fair lots of grain and provisions, and at full rates. In most lines berth room has been firmly held, but, aside from cotton, wheat, corn and provisions, there are none calling for mention.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Very little has been done in the chartering line, either in grain or petroleum tonnage, but there is no material change in rates. Grain inquiry is very light, but there is some demand for oil vessels. Liverpool steamers are running full on mixed freights, but there is not much demand for grain room.

From Baltimore, Md.: The freight market is quiet and steady, with offerings for ocean tonnage moderate.

From San Francisco, Cal.: Ocean freights are very low.

From Wilmington, N. C.: There are numerous arrivals, enough to supply present wants, and few vessels are not chartered.

From Savannah, Ga.: Ocean freights are tending downward, in consequence of offerings exceeding shippers' needs.

From New Orleans, La.: Steam freights are steady. Room for cotton is fair. Room for grain and cottonseed products is moderate. Sail very firm, and room scarce.

GROCERIES.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Staple and fancy groceries are in good request. Prices are steady.

From Columbus, Ohio: A fair business is being done in groceries, but a decrease from last month.

From Topeka, Kan.: Groceries, both wholesale and retail, are in good demand.

From Minneapolis, Minn.: Groceries are moderately active.

From Norfolk, Va.: Groceries are as brisk as usual.

From New Orleans, La.: Sugar is stronger. Molasses is firm. Rice is firm and unchanged. Coffee is strong; fair, 13c.

WHISKY.

[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: Whisky is quiet and steady.

TOBACCO.

[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: Leaf tobacco is in active general demand at steady prices. Receipts are slowly increasing.

From St. Louis, Mo.: Leaf tobacco is in small receipt and dull.

NAVAL STORES.

[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: Naval stores during the last week sold promptly as received. The spirits market closes with buyers and sellers apart.

From Savannah, Ga.: Naval stores continue without interesting features. Receipts coming in freely has restricted buyers and sales are nominal.

LUMBER.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The lumber demand has seriously fallen off, more particularly in hardwoods. Prices appear unchanged.

From Chicago, Ill.: Lumber is quiet and depressed by the recent failures.

From Minneapolis, Minn.: The lumber market rules quiet but firm with a fine demand.

FISH MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: All kinds of fish move slowly, and there are no features worthy of special comment, except that cod are offering at very low prices.

From Portland, Me.: The fish trade is light and unsatisfactory.

KENTUCKY TURKEY SHIPMENTS.

[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: The shipments of turkeys from Kentucky will reach in value $500,000 this season.

COTTON SEED.

[By Telegraph to BRADSTREET'S.]

From New Orleans, La.: Receipts of cotton seed are liberal. The outturn of the mills is considerable. Prices are weaker, owing to the course of foreign markets.

NORTH CAROLINA RICE.

[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: The rice crop loses 40 per cent.; the mills are running on full time; the stock is good and the market is firm.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Upwards of eighty buyers are now in the boot and shoe market from the principal trade centers, and business is gradually improving, but it is not as active as last year at this time.

From Pittsburgh, Pa.: Boot and shoe jobbers report trade so far this season not quite up to last year. At present there is a fair demand, and collections are satisfactory.

From Columbus, Ohio: The boot and shoe trade has not been in excess of that for the previous year, and is believed to have fallen off slightly, and the outlook for a large spring business is not flattering, although the trade is considered healthy.

From Chicago, Ill.: Boots and shoes and rubber goods are moderately active. Jobbers say trade is healthy and sales up to expectations.

LEATHER.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Leather is quiet and steady.

SPECIAL CHICAGO TRADE SITUATION.

[Special Correspondence to BRADSTREET'S.]

Chicago, November 21.—The uneasy feeling noted in business circles in last week's letter has not abated. The banks say they are well supplied with funds, and borrowers who want call loans on choice collaterals are readily met at 6 per cent., but for all classes of time paper the rates are strong at 7, and names without collaterals are closely scanned. The largest borrowers just now are pork-packers, who are more actively employed than at any time within the past two years, and the indications are that the absorption of funds by this class of borrowers will continue to be heavy for some weeks to come. The grain trade also promises to require an increased amount of money as the shipments are likely to decline with the close of lake navigation and an advance in railroad rates.

TRADE EMBARRASSMENTS.

There were 228 failures in the United States reported to BRADSTREET'S during the past week, 23 more than the preceding week, 57 more than the corresponding week of 1882, and 113 more than the same week of 1881. Compared with the preceding week the middle states had 55, an increase of 4; New England states 24, a decrease of 4; southern states 46, an increase of 10; western states 80, an increase of 16; Pacific states and territories 23, a decrease of 3; Canada and the Provinces 24, an increase of 6. Among the principal firms reported embarrassed were L. M. Michels & Co., wholesale fancy goods, of New York, and Michels, Friedlander & Co., of San Francisco; Hoffstadt Brothers, importers of ladies' neckties and laces, M. Henlein & Co., wholesale hosiery, George M. D. Littell & Co., commission canned goods, and La Dow & Lomas, wholesale hats, New York; The National Bank of Rahway, N. J.; The Mississippi Valley Bank of Vicksburg, and The J. J. Powers Oil Company and John F. Halpin & Co., of Vicksburg; H. G. Billings, lumber, and C. L. Epps & Co., maltsters, Chicago; John Sharples' Sons & Co., lumber, Quebec. In the principal trades they were as follows: General traders 46; grocers 24; clothing 13; liquors 12; shoes 12; manufacturers 12; hardware, etc., 10; fancy goods 9; dry goods 8; furniture 7; tobacco and cigars 6; lumber 6; drugs 6; hats 5; harness 4; hotels and restaurants 4; jewelry 4; millinery 3; produce and provisions 3; bakers and confectioners 3; carriages 2; leather 2; commission 2; grain and flour 2; banks 2.

ALABAMA.

BIRMINGHAM.—P. E. Cartwright, general store, has been attached for $5,000.

GOODWATER.—Ponder & Brother, general store, have been closed by the sheriff. Liabilities about $4,000; assets nominal

UNION SPRINGS.—Starke & Harris, millinery, have been closed out by the sheriff.

CALIFORNIA.

CERES.—D. K. Woodbridge, hotel, has assigned.

GRASS VALLEY.—Joseph Ducotey, livery, is in insolvency.

KERNVILLE.—I. Michels & Co., general store, are reported embarrassed by the failure of Michels, Friedlander & Co., of San Francisco, who backed them.

PLACERVILLE.—Charles W. Welts, saloon, has filed a petition in insolvency.

SAN FRANCISCO.—A. Berenz & Son, shoes, have been attached for $900. Liabilities $5,000; assets $4,000.

SAN BERNARDINO.—R. A. Davis, contractor, has filed a petition in insolvency.

SAN FRANCISCO.—John Harrold, Empire Brewery, has filed a petition in insolvency.

SAN FRANCISCO.—Michels, Friedlander & Co., wholesale fancy goods, assigned on the 21st inst. to I. Kohn, M. Smidt, Leopold Michels and S. Greenbaum, the result of accommodations for friends, some of whom have failed, notably M. Henlein & Co. and S. Lautenbach, of New York, unfortunate mining operations and the decline in trade. The liabilities are reported at over $400,000, of which $300,000 are for accommodations and $100,000 for merchandise; the nominal assets are estimated at upward of $500,000. The firm claim to have enough assets to pay in full, and it is said they may ask an extension. All the goods were purchased in New York, the style of the firm in New York city being L. M. Michels & Co. L. M. Michels, the capitalist of the firms, started the business in 1853 in New York and in 1867 at San Francisco.

CONNECTICUT.

WATERBURY.—James J. McGrath, liquors, has assigned.

DAKOTA.

ABERDEEN.—John B. Moore, furniture, has assigned.

CANTON.—P. M. Lund & Co., general store, have sold out and been attached.

ESTELLINE.—George F. Davis & Co., general store, have been attached.

GRAND FORKS.—J. K. Johnson & Co., dry goods, have been attached.

SIOUX FALLS.—H. H. Waxman & Co., dry goods, have had a chattel mortgage foreclosed.

DISTRICT OF COLUMBIA.

WASHINGTON.—Cochran & Co., white goods, have assigned. They also have a store in New York.

FLORIDA.

CEDAR KEYS.—R. M. Chafee, clothing, has assigned and mortgaged stock for $2,500; assets $12,000 to $15,000.

JASPER.—Samuel Register, general store, has assigned. Liabilities $5,000; assets small.

GEORGIA.

ATLANTA.—H. V. Barrow (agent), grocer, is reported to have failed. Liabilities estimated at $500; no assets.

ATLANTA.—Troth & Co., grocers, have failed.

GAINESVILLE.—Neill & Houston, general store, have failed.

SAVANNAH.—John Nugent, baker, has assigned.

TALBOTTON.—J. C. Baldwin, general store, is reported to have been closed by the sheriff.

RISING FAWN.—Fricks Brothers, general store, have assigned. Liabilities $15,000; assets $2,000.

IDAHO.

BLOOMINGTON.—J. Jarvis, general store, has been attached Liabilities $3,000; assets about the same.

ILLINOIS.

BEARDSTOWN.—T. L. Fitzgibbons, tailor, has been closed on a chattel mortgage.

CHICAGO.—Andreass & Co., furniture, have been closed by the sheriff on judgment for $1,030.

CHICAGO.—Horatio G. Billings, commission lumber, temporarily suspended on the 22d inst. It is said he advanced largely to Michigan lumbermen on logs which could not be got to mill on account of low water, and on which he cannot realize till spring. He claims assets of $190,000, and liabilities of $100,000. A new firm has been formed as Billings, Porter & Co. to continue the business.

CHICAGO.—Cleveland, Cummings & Woodruff, wholesale dry goods, are settling at 60 cents, cash, and, it is said, have so far compromised half their liabilities. The total liabilities are about $600,000, and assets $400,000 in cash, received from the sale of their business.

CHICAGO.—John P. Ekstrom, picture frames, has assigned.

CHICAGO.—R. Posner, hats, has been attached.

CHICAGO.—C. L. Epps & Co., maltsters, have been closed by the sheriff on a confessed judgment for $8,507 in favor of Lorenzo B. Ford. They own their malthouse and elevator, which cost $62,000, mortgaged for $22,000.

CHICAGO.—Gottlieb Priesmeyer, furniture, has been closed by the sheriff.

CHICAGO.—Joseph Roche, trading as Roche & Co., tailors, has assigned.

CHICAGO.—Henry Simon, wholesale notions, has assigned to Jay J. Read.

CHICAGO.—Rudolph Stangohr, drugs, has been closed by the sheriff.

CHICAGO.—It is said that the assets of H. C. Tillinghast & Co., hides, will not exceed $150,000. Liabilities $275,000, all unsecured.

LA SALLE.—R. Posner, hats, confessed judgment for $2,429, and was attached for $291.

MILLERSVILLE.—T. Bourdelais, general store, has failed. Liabilities $1,200; no assets.

PEORIA.—Henry Arnholt, Jr., grocer, is reported to have left town.

PEORIA.—S. B. Hartz & Co., hats, offer 25 cents.

PEORIA.—J. M. Robinson, hardware, has been closed by the sheriff on a judgment for $1,430.

PEORIA.—George W. Schramm, grocer, has failed.

QUINCY.—Henry C. Miller, spices and baking powder, has assigned to James H. Clark, without preference. Liabilities $2,000; nominal assets $2,800.

ROODHOUSE.—John H. English, grocer, has been closed by creditors.

SAILOR SPRINGS.—George H. Naylor & Brother, restaurant and saloon, have been closed by creditors. Liabilities about $400; assets $130.

SOUTH CHICAGO.—John D. Oakford & Co., grocers, have assigned.

SPRINGFIELD.—Charles E. Rittenhouse, carpenter, has assigned to James R. Madoy for about $3,700, and conveyed his shop to William J. Schwyer.

WOODHULL.—George S. Baltz, hardware, has failed.

INDIANA.

CLOVERDALE.—C. T. Foster & Son, general store, have assigned.

EDINBURGH.—William Stinett, grocer, has assigned.

EVANSVILLE.—Adolph Stettner, clothing, has assigned to S. J. Loewenstein.

FORT WAYNE.—P. E. Newman & Co., shoes, have assigned.

GOSPORT.—Martin & Smith, dry goods, have assigned.

ROCKVILLE.—Silas L. Warder, grocer and baker, has been closed under a chattel mortgage.

IOWA.

DAKOTAH.—M. C. Brown, general store, has been closed on a chattel mortgage.

DAVENPORT.—George S. Goldstone, jeweler, has assigned.

DEFIANCE.—Stevens & Freise, grain, have assigned.

DES MOINES.—L. Elbringer, clothing, has assigned to Moses Strawes.

HERNDON.—L. G. Rice, general store, has been attached, and given a chattel mortgage for $460.

IRWIN.—Hunt & Wilmarth have failed.

LINEVILLE.—E. W. Daws, clothing, was attached for $700, and conveyed real estate $1,000.

MANNING.—W. H. H. Wilson, baker, has failed.

MARION.—J. A. Graves, general store, has assigned to George Busby.

MARSHALLTOWN.—W. J. Bates & Co., dry goods, gave a chattel mortgage for $5,478, and were attached for $2,200.

KANSAS.

GIRARD.—J. W. Edwards, general store, has assigned.

OLATHE.—Nesbitt Brothers, shoes, have failed. Preferred claims $5,085; assets about $5,000.

TOPEKA.—A. B. House, boarding house, has been attached.

KENTUCKY.

DAVIS.—J. Friedman, general store, has assigned to L. Price.

OWINGSVILLE.—J. W. Hutchinson, harness, has been attached.

WESTON.—George R. Jenkins, saw mill, has failed.

LOUISIANA.

CAMPTI.—N. N. Furlong, general store, has failed and sold out.

NATCHITOCHES.—Mrs. C. Friedman, general store, has been closed by the sheriff.

NEW ORLEANS.—Peter Graham, grocer, has been granted an extension of three, six and twelve months.

NEW ORLEANS.—L. Weigel & Co., cabinet makers, have failed and gone out of business.

MAINE.

BRIDGETON.—T. B. Thompson, marble, is in insolvency.

CARIBOU (North Lyndon).—E. Le Vasseur, general store and lumber, offers 40 cents.

DEERING.—Cyrus B. Abbott, grocer, has gone into insolvency.

EAST BOOTHBAY.—E. J. Seaney, sailmaker, has been attached.

FALMOUTH.—William P. Newman, general store, owes $12,000; actual assets about $7,500. Creditors are willing to to take 60 cents.

PORTLAND.—W. D. Jones, fancy goods, owes $1,270; no assets.

PORTLAND.—William H. Walker, lumber, has been attached.

SKOWHEGAN.—Metzgar Cushing, harness, has been attached.

VASSALBORO.—E. A. Whiting, general store, is in insolvency.

MARYLAND.

BALTIMORE.—Samuel R. Boyd, wholesale and retail lumber, has compromised at 75 cents, and formed a partnership with A. H. McKay, as Boyd & McKay.

MASSACHUSETTS.

ASHLAND.—The committee of creditors of Charles H. Tilton, shoe manufacturer, recommend a compromise at 33 1-3 cents.

BOSTON.—Arey & Maddock, leather, have dissolved, and Mr. Maddock has assigned on his individual account, his name having been on the paper of H. C. Tillinghast & Co., of Chicago.

BOSTON.—L. H. Baldwin, provisions, is in insolvency. Liabilities $10,689; nominal assets $2,241.

BOSTON.—W. S. Fletcher & Co., provisions, are in insolvency.

BOSTON.—Thomas Gerrity, groceries and liquors, is in insolvency.

BOSTON.—The Humiston Food Preserving Company has assigned to Edward Prescott. Suit was brought against the company by F. A. Wyman, assignee of F. Shaw & Brothers, and the factory at Salem was attached.

BOSTON.—W. G. Lewis, of A. S. & W. G. Lewis & Co., commission, has gone individually into insolvency.

BOSTON.—At a meeting of the creditors of William A. Martin, hardware, the statement showed liabilities $54,678, of which $27,678 was contingent as indorsements, and of the latter $10,134 was considered good; assets $23,091. An offer of 30 cents was refused, and Mr. Martin then increased it to 40 cents, payable in sixty days, which was accepted.

BOSTON.—Joseph Pratt, commission merchant, is in insolvency.

BOSTON.—Rice, Jones & Hammond, box manufacturers, are in insolvency. Liabilities $54,973; assets $4,687.

BRADFORD.—A. H. Atwood, grocer, is reported to have failed. Liabilities about $1,200; assets small.

BROCKTON.—Walter Scott, tailor, has been attached.

FALL RIVER.—Hannah (Mrs. Thomas) Wootton, second-hand furniture, has been attached.

HOLLISTON.—A. L. Forbes, shoe manufacturer, offers 25 cents. Liabilities $20,000.

LAWRENCE.—H. F. Barnard, furniture, offers 50 cents, which the creditors have voted to accept.

MALDEN.—O. J. D. Ballard, clothing, has failed.

MARBLEHEAD.—F. Humphrey, shoe manufacturer, has been attached.

NEW BEDFORD.—F. E. May, shoes, owes $1,500. The stock was sold for about $400.

NEW BEDFORD.—W. T. M. White, carriage manufacturer, has failed.

NORTH ADAMS.—Robert Tobin, dry goods, has been petitioned into insolvency by his creditors.

SPRINGFIELD.—S. M. Hunt, Jr., paper stock, has suspended.

WAREHAM.—S. T. Robinson, general store, is in insolvency.

WEST TOWNSEND.—A. G. Stickney, livery and general store, has been attached.

WORCESTER.—C. A. Pickens, grocer, has settled at 60 cents.

MICHIGAN.

BIG RAPIDS.—Thomas S. Tew, saw mill, has been attached.

CADILLAC.—Cummer & Henderson, machine shop, have assigned. Mr. Cummer was of Cummer & Rawles.

CADILLAC.—Cummer & Rawles, hardware, have assigned to Peter Haifley. They are reported to have quarreled among themselves, and Mr. Cummer's venture in the Michigan Iron Works turned out unfavorably. The liabilities are reported at $30,000 and assets nominally the same.

CADILLAC.—Rice & Messmore, bankers, who suspended November 5, assigned on the 20th inst.

DETROIT.—I. Joachimstahl & Co., wholesale millinery, have assigned to Nathan Burton. Liabilities $20,000.

EAGLE.—Niles & Davenstadt, grocers, have failed.

FORT GRATIOT.—Hiram Wyman, grain, has been closed by creditors.

GRAND RAPIDS.—G. W. Harris & Son, grocers, have been closed on a chattel mortgage.

GRAND RAPIDS.—P. E. Newman & Co., shoes, have assigned.

MILLINGTON.—A. Dewitt, general store, has assigned.

MILLINGTON.—Waterhouse & Dewitt, harness, are asking an extension.

MINNESOTA.

MINNEAPOLIS.—Sonnen & Werthmann, furniture manufacturers, have assigned to Louis Schlesinger. Liabilities $16,000; assets $12,000.

ST. HILAIRE.—T. Thiebau, saloon, has assigned.

MISSISSIPPI.

VICKSBURG.—Gus. Asher & Co., wholesale and retail drugs, have been protested and attached.

VICKSBURG.—John F. Halpin & Co., cotton factors and grocers, have been protested and attached for $7,700 in New Orleans. A. K. Bonham, of St. Louis, is the "Co."

VICKSBURG.—The Mississippi Valley Bank assigned on the 21st inst. to George S. Irving. It was a private corporation, composed of George M. Klein, the president, and J. A. Klein, Jr., cashier; has been established since January 1, 1870, and had an excellent standing in the community. The president was considered wealthy, having large interests in real estate in Vicksburg and elsewhere, in steamboat and wharf property, and was also president of the Vicksburg Gas Company and the J. J. Powers Oil Company, and he has assigned all his property to protect the depositors. The assignment was a surprise. The deposits averaged about $500,000. The liabilities are reported at over $800,000. The preferences aggregate nearly $400,000.

VICKSBURG.—The J. J. Powers Oil Company has been protested and attached. George M. Klein, president of the suspended Mississippi Valley Bank, was president of the company.

VOSBURGH.—Parker & Brown, general store, have failed and gone out of business.

MISSOURI.

DARLINGTON.—Williams & Fisher, agricultural implements, have assigned to John O'Brien.

LOCKWOOD.—J. S. Taylor, general store, has assigned. Liabilities $4,744. The stock, invoiced at $6,006, was sold and subsequently attached.

MARYVILLE.—John B. Riggin, furnishing goods, has assigned. Liabilities $2,400; assets about the same.

SEDALIA.—R. B. Shumway, shoes, has assigned.

ST. LOUIS.—J. Freeman, clothing, has compromised at 50 cents.

MONTANA.

CLENDENNIN.—The Clendennin Smelting Company has been attached for $40,000.

CLENDENNIN.—F. M. Reed & Co., general store, have assigned. Liabilities $30,000; assets about the same; preferences $20,000.

NEBRASKA.

FLORENCE.—G. P. Thompson & Co., brick, have been attached.

LINCOLN.—Pomeroy & Co., notions, have failed.

ST. PAUL.—Louis F. Schonlan, clothing, has been closed by attachment.

NEW HAMPSHIRE.

DERRY DEPOT.—Horn Brothers, saw mill, owe about $13,000; unsecured assets about $2,000.

KEENE.—A. R. & E. S. Foster, builders, have been attached for $1,500.

NEW JERSEY.

ASBURY PARK.—M. E. (Mrs. John H.) Davis, grocer, has been sold out by the sheriff.

CAMDEN.—A receiver has been appointed for the Robbins Manufacturing Company, printing press machinery.

HOBOKEN.—J. C. Farr, lumber, has assigned. Liabilities about $80,000; assets $40,000.

JERSEY CITY.—Jaquins & Van Winkle, ship chandlers, claim to have compromised their merchandise debts at 50 cents, which is guaranteed by one of their creditors. The business will be wound up.

NEWARK.—Louis Bangert, drugs, has been sold out under a chattel mortgage. Liabilities about $1,000; assets about $400.

NEWARK.—A. B. Sanders, hardware, has had execution issued against him on judgment for $2,843 in favor of Samuel Sanders.

NEWARK.—Edward White, grocer, is said to have been closed on a chattel mortgage.

NEW BRUNSWICK.—Mrs. E. M. Whitney, fancy goods, is reported to have assigned.

RAHWAY.—The National Bank of Rahway suspended payment on the 22d inst. on account of an unexpected run by depositors. The officers claim that the suspension will be only temporary, that the depositors will be paid in full, and that the bank will probably be reorganized. The deposits at present are said to be about $140,000, and the cashier says there is $50,000 in the treasury in bonds. The bank has been established under its present style since 1865, and had a paid in capital of $100,000. A. F. Shotwell is president and Townsend W. Shotwell cashier.

NEW MEXICO.

ALBUQUERQUE.—Maybee & Schaffer, jewelers, have assigned to Arthur Everett. Liabilities $11,000; nominal assets $8,000.

LAS VEGAS.—R. C. Heise, wholesale liquors, has assigned to C. L. Fort.

SAN HILARIO.—Jesus M. Gallegas has assigned to Felix Martinez all the property he has outside of the firm of J. M. Gallegas, Brothers & Co., general store, for the benefit of creditors and for the benefit of the late firm of Baca & Gallegas. The liabilities are $24,000, and the assignee is about to sell the property for $38,000, which will more than pay all liabilities. He did not feel competent to liquidate and so assigned to Mr. Martinez, who is the only creditor of J. M. Gallegas, Brothers & Co.

NEW YORK.

ALBANY.—Gahan & De Blacy, shoe manufacturers, have assigned to L. De Blacy, giving preferences for $825.

AMSTERDAM.—Schendel & Noah, fancy goods, have assigned to Leopold Levy.

BUFFALO.—Walker Brothers, cigars and confectionery, have assigned to E. C. Hawks.

COHOES.—Edward Scopes, shoes, has assigned.

DUNKIRK.—Miss M. Emory, millinery, has transferred stock.

EAST BETHANY.—W. J. Wood, carriage maker, has assigned.

ELMIRA.—The schedules of P. T. Allen, carriages, show liabilities $17,313; actual assets $3,470.

JAMESTOWN.—J. W. Prosser & Co., paints, wall paper, etc., have assigned to Franklin Simmons.

MEXICO.—Mattison & Crosby, general store, have assigned.

NAPLES.—Z. F. Knapp, manufacturer of grape boxes, has assigned.

NEW YORK CITY.—The schedules of Ephraim Berlowitz, clothing, show liabilities $61,539; nominal assets $12,594; actual assets $4,743.

NEW YORK CITY.—Charles H. Blackhurst, stair builder, assigned on the 19th inst. to Richard P. Berrien, without preferences. He has been in the business for about twenty-five years, but has not been successful for some time past.

NEW YORK CITY.—The schedules of Nathaniel A. Boynton, who assigned January 13 on account of indorsing for Alonzo Follett, were filed on the 21st inst., showing nominal liabilities $412,913; nominal assets $92,215; actual assets $2,720.

NEW YORK CITY.—The schedules of Thomas Bristoll, shoes, show liabilities $5,020; nominal assets $4,470; actual assets $3,305.

NEW YORK CITY.—Campbell Brothers, hats, assigned on the 19th inst. to Frank J. Burnes, without preferences. Liabilities $3,100. They began May 1.

NEW YORK CITY.—The schedules of Morris Dobrynzki, furs, show liabilities $3,488; assets $1,440.

NEW YORK CITY.—The schedules of Ganseberg & Schultze, cigar manufacturers, show liabilities $8,493; nominal assets $7,658; actual assets $4,271.

NEW YORK CITY.—The schedules of Mina Hamburger, grocer, show liabilities $8,910; nominal assets $7,219; actual assets $3,768.

NEW YORK CITY.—The schedules of William Harris, peddlers' supplies, show liabilities $10,412; nominal assets $12,409; actual assets $4,905.

NEW YORK CITY.—M. Henlein & Co., wholesale hosiery, assigned on the 19th inst. to Leopold Bleier, giving preferences for $50,726, all for borrowed money and discounts. They were as follows: National Citizens' Bank $14,831, discounted notes; Ninth National Bank $16,146, discounted notes; Charles Wolff & Co. $3,963; Solomon Henlein $3,000; S. Parshalsky $2,200; Joseph Blumerthal $1,407; Lazard Freres $676; Joseph Rosengarten $6,500; Meyer Rosengarten $2,000. The failure is attributed to indorsements and accommodations for friends, some of whom have failed. The liabilities are reported at $200 000, of which there was for merchandise about $150,000, and the balance borrowed money and discounts; assets about $150,000, composed of outstandings $100,000; stock $50,000. The business was established in 1853.

NEW YORK CITY.—Emil Hirsch, laces, assigned on the 22d inst. to Herman Cantor, giving preferences to Tilly Stern, loans, $8,144; Louise Fisher, loan, $250; Henry Stern & Co., accommodation note, $1,211; National Park Bank $5,902; Emil S. Levi, $6,223; total $24,730. He succeeded to the lace department of E. Henlein & Co., on February 1 last. The liabilities are reported at $44,000, and assets $40,000.

NEW YORK CITY.—Hoffstadt Brothers, importers of ladies' neckties and laces, assigned on the 17th inst. to Henry Brash, giving preferences for $58,275, all on promissory notes, the holders of which are unknown, except one, L. Casper, $6,000. The Tradesmen's National Bank is also preferred for any overdrafts or discounts. The present firm was formed in 1878, Adolphus Hoffstadt, the senior partner, having been in business before as Newherr & Hoffstadt, who failed in 1874. Their statement of October 5, 1883, claimed liabilities $92,000, and assets $136,500, consisting of merchandise $82,000; good accounts receivable $48,000; cash $4,500; surplus $44,500. They were attached on the 17th inst. by A. & S. Blumenthal and Einstein, Hirsch & Co.

NEW YORK CITY.—Horwitz & Hepner, manufacturers of chenille trimmings, assigned on the 23d inst. to Charles Mitzennis, giving three preferences for $1,475.

NEW YORK CITY.—The schedules of George W. Hungerford & Son, machinists, show liabilities $8,025; nominal assets $12,209; actual assets $1,227.

NEW YORK CITY.—Klepper, Mortland & Burd, manufacturers of dress trimmings, assigned on the 22d inst. to John H. Delaney, giving four preferences for $1,864. They succeeded Klepper & Mortland July 1. Liabilities about $5,500.

NEW YORK CITY.—La Dow & Lomas, wholesale hats, assigned on the 22d inst. to Theodore L. Jabine, giving preferences to Tweedy & Co. $9,000; Coffin & Hurlburt $9,000; Matteawan Manufacturing Company $4,500; total $22,500. They began December 1, 1880, claiming $10,000 capital. The liabilities are about $70,000, and assets $50,000. The failure resulted from the refusal of parties to carry them any longer, which discouraged the firm. More than one-half of their debts is to three firms, who have carried them for a long time.

NEW YORK CITY.—The schedules of Simon Lautenbach, shirt manufacturer, show liabilities $171,501; nominal assets $65,833; actual assets $62,312.

NEW YORK CITY.—George M. D. Littell & Co., commission canned goods, assigned on the 20th inst. to Henry Aplington, giving preferences for $27,979, as follows: C. B. Littell $266; Importers' & Traders' National Bank $8,330; Isaac Littell $13,500; Kemp, Day & Co. $4,000; J. E. Walker $1,700. Doing too large a business for the capital and depreciation in this trade are attributed as the causes of the failure. The liabilities are estimated at over $75,000.

NEW YORK CITY.—L. M. Michels & Co., wholesale notions, have assigned in San Francisco, where Mr. Michels went a week ago. See San Francisco for details.

NEW YORK CITY.—M. Norden, wholesale clothing, assigned on the 23d inst. to Max Richter, giving two preferences for $2,600. In September he claimed assets of $58,000 and liabilities $18,000. He has a branch at Meriden, Conn.

NEW YORK CITY.—The schedules of Pick, Poole & Co., manufacturers of trimmings, show liabilities $20,465; nominal assets $26,711; actual assets $6,926.

NEW YORK CITY.—James S. Porteous, agent, assigned on the 20th inst. to Frank Hasbrouck, giving preferences to Charles S. McKnight and Fogg, Dunbar & Co., no amounts being mentioned. He was the New York representative of Stewart Brothers, of London, and R. A. & J. Stewart, of St. John, N. B, lumber and slate merchants.

NEW YORK CITY.—Walter T. Swezey, ruffling manufacturer, assigned on the 20th inst. to Wilson C. Smith.

NEW YORK CITY.—Henry A. Topham, men's furnishing goods, assigned on the 17th inst. to Joseph T. Stevens, giving preferences for $1,445. This is his fourth failure.

NEW YORK CITY.—Mrs. Mary J. Whitehouse, manufacturer of bonnet frames, assigned on the 17th inst. to Peter C. Ritchie, giving him a preference for $2,411 and others $1,235; total $3,646.

PARMA CENTRE.—The schedules of W. J. Dunn, carriages, show liabilities $9,320; actual assets $3,240.

ROCHESTER.—Lattimer Brothers, shoe manufacturers, have assigned to John Nugent, giving preferences for $2,588.

ROCHESTER.—H. W. Marcellus, agricultural implements, has assigned.

ROCHESTER.—The direct liabilities of Thompson & Dickenson, shoe manufacturers, are $14,734; contingent $5,966; total $20,701; nominal assets $20,723.

SAUGERTIES.—Freligh Brothers, grocers, have assigned to John C. Davis, giving preferences for $5,583.

SILVER CREEK.—McNeal & Spaulding, manufacturers of smut machines, have transferred stock and gave a chattel mortgage for $7,136.

SYRACUSE.—Richard R. Burke, trunk manufacturer, has assigned to Jediah Dwelle. Liabilities about $1,450; preferences $449; assets nominally $1,800.

SYRACUSE.—Solomon Shimberg, peddlers' supplies and notions, has assigned to I. Henry Danziger, giving preferences for $25,298, of which $7,200 is to the State Bank of Syracuse.

SYRACUSE.—L. L. Silverman, jewelry and notions, has assigned to Wolf Harrison, giving preferences for $10,170. The total liabilities are reported to be about $30,000.

NORTH CAROLINA.

ASHEVILLE.—S. Whitlock & Co., general store, who assigned to Philip Shiff, gave preferences for $6,500. Liabilities about $18,000; assets in stock $12,000.

ELIZABETH CITY.—B. & L. Schultz & Co., shoes, are reported to have assigned.

STONEWALL.—F. F. Cherry, general store, has failed.

WILMINGTON.—H. H. Kasprowicz, tobacco and cigars, has assigned to S. H. Fishblate. Liabilities $18,000; nominal assets $12,000. He has a branch at Goldsboro.

OHIO.

BELLEFONTAINE.—McKee Brothers, stoves, have been closed by the sheriff.

BERLIN HEIGHTS.—A. Cogshall, saloon, has been attached.

CINCINNATI.—William Wentzell, saloon, has assigned.

FOSTORIA.—Frank Woodruff, merchant tailor, is reported to have been closed on attachment.

McCLURE.—Thomas D. Rowland, general store, has assigned to C. McLain.

MILLERSBURG.—Maxwell, Stevens & Co. and Maxwell Brothers, millers, are reported to have assigned to Enos Moreland. Liabilities about $72,000; assets $60,000.

NEWARK.—H. L. Maschke, clothing, has been closed by the sheriff.

PIQUA.—W. N. King, printer and publisher, has been attached by creditors.

POST BOY.—L. Booth, general store, has been closed by the sheriff.

SANDUSKY.—Joseph Grassgreen, dry goods, has assigned.

URBANA.—E. O. Hedges, general store, has assigned to G. W. Hedges.

OREGON.

FOREST GROVE.—W. D. Hoxter, general store, has given a bill of sale.

ROSENBURG.—T. M. Morgan, cigars, has been closed by attachment.

PENNSYLVANIA.

BLAIRSVILLE.—Henry A. Rugg, cigar manufacturer, has assigned to B. F. Beatty.

CLAY.—J. V. Kline, cigar manufacturer, has assigned.

CORRY.—John F. Gates, grocer, has been closed by the sheriff on confessed judgments. Liabilities about $2,500; assets estimated at about $1,000.

DANVILLE.—Peter Baldy, dry goods, who recently failed, confessed judgments to trustee of Ellen A. Matthews $27,000; trustee of Ann E. Baldy, his wife, $18,000; trustee of Martha Clark $23,000; Mary C. Greenough $28,000. His liabilities are said to amount to over $200,000 and assets $100,000.

DU BOIS.—James A. Burke & Co., bottlers, have been closed by the sheriff.

ELIZABETHTOWN.—Joseph Greenwalt, hotel, has assigned.

ERIE.—Isaac Kussell, clothing, is in the hands of the sheriff.

FREEPORT.—S. J. Anthony, late shoes, has assigned.

HARRISBURG.—I. R. Tomlinson, carriage maker, has been closed by the sheriff and the sale is advertised for the 27th inst.

HUNTINGTON.—The Keystone Boot, Shoe & Leather Manufacturing Company has been closed by the sheriff.

McKEESPORT.—F. Rhodes, saloon, has been closed by the sheriff.

MILLERSVILLE.—Charles Laeders, manufacturer of cigars, has been closed by the sheriff.

PHILADELPHIA.—William Arkinson, Lancashire Mills, manufacturer of cotton goods, has been closed by the sheriff on execution for about $9,000 in favor of Clough & Carson. Goods in the hands of agents have also been levied upon.

PHILADELPHIA.—George Erwin, saloon, is advertised to be sold out by the sheriff on the 26th inst.

PHILADELPHIA.—Michael Gates, manufacturer of carpets, has been sold out by the sheriff, realizing only $171.

PHILADELPHIA.—Bernard Grant, saloon, has been closed by the sheriff.

PHILADELPHIA.—William Harper, commission lumber, at a meeting of creditors, held on the 19th inst., offered to settle at 40 cents, one-half cash, and a two months' note, unsecured, without interest, for the balance. Creditors agreed to accept the offer. He claims that his failure was caused by the failure of Henry A. Hunsicker, who owes him about $1,000. It is said he owes $4,700.

PHILADELPHIA.—Henry Hopkins, china, etc., was sold out by the sheriff on the 18th inst. It is said the sale was at the instance of his wife, who is said to own the property.

PHILADELPHIA.—At a meeting of creditors of Henry A Hunsicker, lumber, a settlement was accepted at 75 cents—25 cents July 1, 1884, and 12½ cents each three months thereafter, giving a judgment note covering all assets to A. W. Von Utassy and E. P. Burton, for benefit of creditors.

PHILADELPHIA.—Daniel M Karcher's Sons, manufacturers of furniture and upholstery, have compromised at 33 1-3 cents. It is said a friend loaned them $15,000 with which to effect the compromise.

PHILADELPHIA.—Charles Schmid, saloon, is advertised to be sold out by the sheriff.

PHILADELPHIA.—Joseph D. Stead, yarn manufacturer, was recently sold out by the sheriff, and the amount realized ($384) did not more than pay the wages of employees. His liabilities are reported at about $12,000. William Arrott holds a mortgage of $20,000 against the building and machinery, and it is thought that the same will be foreclosed.

PITTSBURGH.—W. T. Baines & Co., coal, have been closed by the sheriff on execution for $8,400. It is thought they will obtain an extension.

PITTSBURGH.—Donnelly & Kenney, planing mill, have been sold out by the sheriff.

PITTSBURGH.—The liabilities of O'Reilly & Savage, dry goods, are about $6,000.

TITUSVILLE.—John Lee, harness, has been closed by the sheriff.

WILKES BARRE.—W. W. Fry, drugs, has been closed by the sheriff on execution for $4,350.

YORK SULPHUR SPRINGS.—A. S. Hartman, general store, has assigned to W. H. Gardner. Liabilities about $20,000; assets about $12,000.

SOUTH CAROLINA.

CHERAW.—Jacob Ganey, general store, have been closed by the sheriff.

DOVESVILLE.—A. B. Reid & Brothers, general store and turpentine, have assigned.

EASTOVER.—W. Oakman, general store, offers 33 1-3 cents.

LAURENS.—Wright & Fuller, general store, offer 50 cents.

STROTHERS.—David T. Janes, general store, offers 50 cents.

TENNESSEE.

CHATTANOOGA.—J. G. Ragsdale & Brother, grocers, have assigned to L. M. Elder.

FALLS BRANCH.—T. M. Wells, general store, has assigned.

MEMPHIS.—Samuel Rothschild, jeweler, has assigned.

TOWNSEND.—S. S. Townsend, general store, has been attached.

TEXAS.

AQUILLA.—D. W. Richards, general store, has compromised with his Texas creditors at 50 cents, half cash and half in one year, secured.

AUSTIN.—Frank McKay, clothing, has assigned.

CORSICANA.—B. H. Wood, general store, is reported to have been attached. Liabilities $1,500; actual assets $300.

DE LEON.—Boilen, Morris & York, general store, have been attached.

ENNIS.—W. E. Flening, grocer, transferred part of his stock, and was attached for $2,000.

LAMPASAS.—McLain & Co., furniture, have assigned to F. R. Malone. Liabilities $6,000; nominal assets $10,000.

MARSHALL.—William Sinnott, tailor, has been granted an extension of six and nine months.

TROY.—Grubbs & Bowers, general store, dissolved, and Mr. Grubbs, who succeeded, was attached for $1,600 by a Galveston creditor.

UTAH.

LOGAN.—W. S. Norcross, drugs, has assigned to L. C. Eastman.

SALT LAKE CITY.—J. M. Salisbury, notions, has assigned. Liabilities $1,650; assets $1,060; preferences $732.

VIRGINIA.

MANASSAS.—Isaiah Keys, general store, who failed about two months ago, owes about $4,000; assets $3,000.

WASHINGTON TERRITORY.

SPOKANE FALLS.—H. J. Brown & Co., general store, have called a meeting of creditors. They are reported to owe $14,000 in San Francisco.

WEST VIRGINIA.

CHARLESTOWN.—Duke & Gallagher, hardware, dissolved on the 20th inst. and assigned their stock to W. W. B. Callaher and A. E. Kennedy as trustees.

WISCONSIN.

DARLINGTON.—Williams & Fisher, agricultural implements, have assigned to James O'Brien.

GRATIOT.—William Johnson, general store, has failed. Liabilities $4,000; assets $1,800.

MANITOWOC.—Nielson & Stoelting, general store, have assigned to William Rahr. Liabilities $3,000; assets $5,000.

MERRILLAN.—A. H. Owen & Co., grocers, have assigned to M. Bowe.

NEILLSVILLE.—William Haslett, gunsmith, has assigned to J. R. Sturdevant.

PORTAGE.—Franz Yanko, grocer, has assigned to A. Kiefer. Liabilities $900; assets $200.

RACINE.—F. L. Fancher, drugs and groceries, has assigned. Liabilities estimated at $10,000; assets $3,500.

WAUSAU.—W. B. Philbrick, restaurant and groceries, has assigned. Liabilities $2,000; assets $1,500.

WONEWOC.—Charles Doering, harness, has assigned.

MANITOBA.

EMERSON.—H. Killer, general store, has assigned.

VIRDEN.—Downs Brothers, general store, have assigned.

WINNIPEG.—W. H. Keefer, saloon, is in the hands of the sheriff.

WINNIPEG.—Smith & Bell, tinware, have been seized by the sheriff.

PROVINCE OF ONTARIO.

COMBER.—J. L. Reaume, general store, has assigned.

DEER PARK.—E. H. Sweetman, grocer, has assigned.

DURHAM.—A. C. Mackenzie, general store, is reported to have assigned.

HAMILTON.—H. S. Bartram, fruits, etc., has assigned.

HUNTSVILLE.—A. A. Raven, general store, is advertised to be sold out by the trustee.

KINCARDINE.—Mitchell Brothers, grocers, have failed, they offer 50 cents.

SARNIA.—George Lucas, harness, has assigned.

TORONTO.—Timms, Moore & Co., printers, have assigned.

TORONTO.—Willing & Williamson, books, have assigned. They had been hard pressed for several months, and their bankers made an investigation in September.

WINDSOR.—Drake & Joyce, furniture, offer 50 cents.

PROVINCE OF QUEBEC.

MONTREAL.—Bennet & Co., wholesale stationers, have assigned.

MONTREAL.—G. Dansereau, shoes, has assigned.

MONTREAL.—Ducharme & Prevost, dry goods, have assigned.

MONTREAL.—Joseph Loissello, groceries and furniture, has assigned.

MONTREAL.—H. Sternberg, hats, has assigned.

QUEBEC.—Letellier & Dubord, grocers, have suspended and offer 70 cents.

QUEBEC.—John Sharples, Sons & Co., lumber, ask an extension. Liabilities about $650,000; assets $500,000. Of the liabilities $140,000 is due the Union Bank; $100,000 to the Merchants' Bank; $40,000 to La Banque National, and $35,000 to banks in Quebec. It is said they have made heavy losses in England lately, and they are anxious to sever their connection with their English house. Depreciation in stock was another cause of their embarrassment. Included in the liabilities is a family claim, it is said, of about $110,000, which may not be pressed if the extension is granted.

ST. CESAIRE.—Morin & Co., general store, have compromised at 50 cents.

ST. HYACINTHE.—Timothy Dwane, foundry, has assigned.

ST. POLYCARPE.—John St. Pierre, general store, has assigned.

THREE RIVERS.—Moise Masson, hotel, has been sold out by the sheriff.

THREE RIVERS.—U. Pottrier, shoes, has failed.

BRADSTREET'S:

A Journal of Trade, Finance, and Public Economy.

PUBLISHED BY THE BRADSTREET COMPANY,
279, 281, 283 BROADWAY, NEW YORK.

Terms, $5.00 per year in advance, including postage.

SINGLE COPIES, TEN CENTS.

SPECIMEN COPIES WILL BE SENT FREE UPON APPLICATION.

As a financial and commercial newspaper the foremost purpose of BRADSTREET'S is to be of practical service to business men.

Its special trade and industrial reports; its weekly epitome of bankruptcies throughout the United States and Canada, and the summaries of assets and liabilities, are alone worth the subscription price.

The synopses of recent legal decisions constitute an exceedingly valuable feature.

As commercial transactions, in the wider sense, are coming to be more and more conducted on a statistical basis, the information contained in BRADSTREET'S is of the first importance both to producers and middle-men.

THE TRADE AND AGRICULTURAL SITUATION THROUGHOUT THE UNITED STATES AND CANADA IS REPORTED BY TELEGRAPH TO BRADSTREET'S UP TO THE HOUR OF PUBLICATION.

BRADSTREET'S

A JOURNAL OF

TRADE, FINANCE, AND PUBLIC ECONOMY.

PUBLISHED WEEKLY BY

THE BRADSTREET COMPANY,

NOS. 279, 281 & 283 BROADWAY, NEW YORK.

London Office, 84 Newgate Street, E. C.

TERMS: $5.00 PER YEAR IN ADVANCE; SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 1, 1883.

NOTES OF THE WEEK.

In considering the claims put forth with so much energy of late on behalf of government control of the telegraph, we have uniformly taken the ground that the arguments advanced in favor of the undertaking are not of sufficient weight to justify a change in what has hitherto been the policy of the government in respect to the matter, especially in view of the fact that the organization of the civil service is as yet in a transition state. The whole question, however, may well be regarded as an open one, and one upon which light from any quarter whatever is to be welcomed. The subject has recently engaged the attention of two writers particularly well qualified to discuss it, who have given their views in contributions to the last two numbers of the *North American Review*. The first of the articles referred to was by Mr. Norvin Green, the president of the Western Union Telegraph Company, who, in the November number of the *Review*, presented an earnest argument against government control. Mr. Green contends that the Constitution does not authorize the government to assume control of the telegraph system of the country; that if the authority be assumed under the grant of power to establish post offices and post roads, the most the government can do is to hire the transmission of messages taken at and delivered at the post offices, and that if the authority be assumed under the grant of power to regulate commerce, it will be insufficient, for the reason that that power exists only in respect to foreign and interstate business. He then directs attention to the objections which lie to government control on the score of policy, such as the opportunity for political abuses, and concludes his plea in behalf of private management with an exposition of statistical and other evidence tending to prove that the existing telegraph service in this country is both more economical and more satisfactory than the same service under government management in European countries.

A different view of the question is presented by Mr. Gardiner G. Hubbard, of Cambridge, Mass., in the December number of the *Review*. While admitting the superior efficiency of the telegraphic service in this country, and while conceding that, as a telegraph for business, where dispatch is essential and the price is of little account, the system is unrivaled, Mr. Hubbard declares that as a telegraph for the people it is a signal failure. The telegraph, he says, is used very largely for social purposes in Europe, while in this country its use is for the most part confined to matters of business. The telegraph is used more freely in England, Holland, Belgium and Switzerland than with us, and the rates in those countries are much less than here, though the rates between localities in different countries are higher than rates for similar distances here. The limited extent to which the telegraph is used in the United States in comparison with England and several other European countries is due, the writer thinks, to want of uniformity in the rates here, to high charges, to the discrimination in favor of business telegrams, and to the fact that ours is a business and railroad system, while those abroad are postal systems. In his opinion, the solution of the question here lies in the establishment of a postal telegraph, which, without competing with the business of the private companies, such as the Western Union, shall provide a cheap telegraph. Congress he urges could create a postal system, using the present post offices and delivery system and either constructing its own lines or contracting with parties to furnish all necessary lines for transmitting telegrams. The Western Union might still continue to perform a large part of the commercial business, on account of greater dispatch, and the business of the railroads. Certain abuses in private management might be to a great extent corrected by well considered legislative action. Among other things stock dividends and the increase of capital except for cash might be prohibited, and annual returns of the business of the several companies might be compelled. Mr. Hubbard's article is one of considerable interest, and the plan he recommends is at least deserving of examination. The use of the telegraph shows a constant tendency to increase under the pressure of modern needs and every measure which renders the employment of this swift and valuable means of communication cheaper and more convenient must be accounted to that extent a gain. We shall await with interest a further exposition of the plan of a postal telegraph.

The prominence which the currency question is now assuming brings clearly into view the original defect of the national banking system, namely, that it had as its basis evidences of debt which would naturally cease to exist with the advancing prosperity of the country. As things are, the first move should be for Congress to at once largely reduce taxation. In this way more time would be given for finding a right solution of the bank question. The need is to devise some other available means of securing the holder of a national bank note from danger of loss. It should not be acknowledged that the continued existence of a national debt as the basis, is essential to the carrying on of a national banking system. The danger is that the issuing of paper money will cease to be a monopoly of the national treasury. Experience shows that, under our system at least, the office of government in relation to paper issues should be regulative merely. The currency question can best be discussed when the incoming Congress shall have shown its hand in relation to the reduction of taxation.

The stock market has naturally been very dull this week, the occurrence of two holidays tending to make business duller than it would be naturally. Yesterday there was a little activity in the market and some improvement of prices, due to the truce between the warring roads in the west. The stocks of those roads, however, showed no such appreciation as would indicate that the troubles had ceased. The large amount of money coming out from the government and corporations about this time causes some demand for good bonds, and the bull cliques in the street hope that an improvement in the stock market may also result from this cause.

Ex-Secretary Blaine has written a letter to Mr. Charles E. Smith, the editor of the Philadelphia *Press*, condemning Mr. Wharton Barker's proposition for a distribution of the surplus revenue of the National Treasury among the states, which was adopted by the last republican state convention in Pennsylvania, and recommending instead the distribution to the states, in proportion to their population, of the tax on spirits. Whatever may be thought of Mr. Blaine's own scheme his objections to the Pennsylvania plan must be regarded as well taken. His first objection to that project is that the amount of redundant revenue is necessarily uncertain. It cannot be depended upon as a steady resource, and therefore will bring no relief to the states since it will not enable them to dispense with any part of their own taxation. Another objection is that the plan would impose on senators and representatives a divided interest, which would be embarrassing and hurtful, since it would present temptations to representatives from needy states to swell the "redundant revenue" and to withhold appropriations from objects of a really national character. Finally, says Mr. Blaine, the proposition is objectionable for the reason that it proceeds upon the assumption of a continuing redundancy of national revenue. This, the writer says, is opposed to all sound views of administration, a redundancy always leading to extravagance, to many forms of corruption and to all manner of schemes for getting rid of money.

Mr. Joseph Nimmo, Jr., Chief of the Bureau of Statistics, reports for the fiscal year ended June 30 that the total value of our imports and exports of merchandise during the year amounted to $1,547,020,316, and was larger than during any previous year in the history of the country. The excess of the value of the exports of merchandise over that of the imports was $100,658,488, against a similar excess during the preceding year of $25,902,683. The value of the exports of domestic merchandise was $804,223,632, against $733,239,732 during the preceding year, an increase of $70,983,900. The total value of imports was $723,180,914, against $724,639,575 during the preceding year, showing a falling off of $1,458,660. The value of the exports of cotton amounted to $247,328,721, against $199,812,644 during the preceding year; of bread and breadstuffs to $208,040,850, against $182,670,528 during the preceding year; of provisions to $107,388,287, against $120,655,701 during the preceding year; of tobacco and manufactures thereof to $22,095,229, against $21,430,869 during the preceding year; and of mineral oils to $44,913,079, against $51,232,706 during the preceding year. The value of the imports of sugar and molasses was $99,326,395; of wool and manufactures thereof, $55,224,283; of silk and manufactures thereof, $50,807,616; of chemicals, drugs, dyes and medicines, $43,126,287; of coffee, $42,050,513; of iron and steel and manufactures thereof, $40,796,207, and of cotton goods, $36,853,689. The total exports of gold and silver amounted during the year to $31,820,333, against $49,417,479 during the preceding year, and the total imports thereof to $28,489,391, against $42,472,390 the preceding year. The excess of the exports of gold and silver over imports amounted to $3,330,942, against a similar excess of $6,945,089 during the preceding year. In both years this excess was due to exports of silver, those of gold being less than the imports.

LABOR IN THE PRISONS.

The recent vote in favor of the abolition of the contract labor system in the prisons of the state of New York has opened up the whole matter of punishment for crime under such conditions as to inspire the hope that the question will receive at least a more intelligent discussion than it has as yet had. It is well that this too long neglected matter has been at length brought into prominence in the leading state in the Union. It has long been plain to observing students that our penal systems are sadly in need of amendment. Statistics reveal the unpleasant fact that the criminal classes are increasing much faster than the population as a whole. Most of the convicts discharged from prison may be regarded as permanent additions to the criminal population. The system of discipline in vogue is not even adequate to restrain the irregular propensities of the prisoners while in actual confinement, as the not infrequent riots and mutinies in penal institutions clearly show. The investigation of the New York Assembly committee into the management of the prisons of the state last year disclosed some very unsavory facts indeed regarding the system of administration pursued in those institutions. In the course of that inquiry it was rendered clear that the whole tendency of the then existing system was against rather than favorable to any reformation of the convict, having in view, as it did, one only of the ends of a true penal system, namely, the punitive end, which assumes less and less importance as civilization advances. In the pursuit of this end the preventive and reformatory aspects of prison discipline have been almost entirely overlooked. The contract convict labor system fell in with the narrow and primitive ideas upon which the discipline of the prisons, such as it was, was based, and it is not surprising that under the plan of administration which has obtained the contract system attained great strength. The vote in favor of the abolition of that system indicates that the earnest efforts which have been directed against the existing system have not been put forth in vain, and that the way is open for the adoption of intelligent measures in the place of the discredited methods which have so long prevailed.

Although this gratifying progress has been made it must not be forgotten that, as we have already intimated, the difficulties connected with the subject have not been wholly removed. The carrying out of the popular will regarding the abolition of the convict labor system falls, of course, within the province of the legislature; the question whether a good and useful system is to be substituted for the old one depends in great measure upon the extent to which the collective judgment of the legislature is reliably informed regarding the conditions under which labor may be employed in the prisons, with advantage both to the state and to the prisoners themselves. It may be taken for granted that labor of some sort will continue to be carried on in the prisons; the problem, as we have heretofore pointed out, is to ascertain under what regulations it may be made to play a useful part in the reclamation of criminals and, incidentally, to relieve to some extent the burden of taxation which the abandonment of the old system will entail. But this problem demands for its solution, in addition to a knowledge of the facts germane to the subject, a degree of familiarity with the principles of penal science thus far developed such as is possessed by very few, if any, legislators except those who have made a special study of the subject, and of these latter we are convinced the number must be very small indeed. Under the circumstances the proper course for the legislature is to appoint a commission composed of men who have made penal science a special study and who would make a thorough investigation of the subject in all its bearings, and report to the legislature not only the facts ascertained by the investigation, but also recommendations for the guidance of that body in its efforts to effect a reform. A proposition for the appointment of such a commission was made at the last session of the legislature, but was not acted upon. It is understood that the same measure will be reintroduced at the coming session. Either it or some other measure conceived in the same spirit should be passed by the next legislature. The report of such a commission as has been suggested would form the basis of intelligent action by the legislature, and, if a proper degree of publicity were given to its conclusions, would do much to further the spread of correct principles regarding the treatment of criminals.

ENGLAND AND THE FOREIGN TRADE IN FOOD.

In the brief paper read before the London Statistical Society June 19th, Mr. Stephen Bourne presented a new arrangement of statistics respecting the food products of the world and their international distribution. Mr. Bourne evidently addressed himself to the laborious task of collating and comparing the world's annual supply of food-products—an average of three years being taken—in the face almost of impracticability. The grain and vegetable crops of some important producing countries have not been officially reported for periods ranging from six to nine years, and the at times utter want of uniformity in the reports at hand rendered the self-imposed task particularly difficult. The sources of information, as may be inferred, were British, colonial and foreign government agricultural bureau and consular reports. The object of the exhibit was two-fold, in that it could be used, first, to point out the vast and not often fully recognized importance of the international commerce in food products, cereals, meats, live stock for food, vegetables, fruits, sugars, liquors, spices, etc., and the somewhat surprising small "balance of trade" that exists annually between countries importing or exporting largely of the commodities under discussion; and second, to clearly define the singularity of the position of the United Kingdom, which, while a great manufacturing nation, is not only unable to produce food enough to feed its inhabitants, but is not likely ever to be able, so far as the capabilities of the soil of the British islands are concerned. This, of course, points to the necessity for Great Britain to sell its manufactured wares in foreign lands in order to pay for the food which is purchased from abroad. And this consideration leads the author of the paper to consider the prevalence of high tariffs in lands where the British manufacturer should be able to sell his wares, and which serve to seriously tax the British people's ability to pay for their food. To the problem thus presented is the final argument in the paper addressed.

A condensation of Mr. Bourne's very interesting statistics respecting the values (in £s sterling) of the exports and imports of food in the United Kingdom, the British possessions and in foreign countries, classified to show those which sell more abroad than they buy from others and vice versa, is here given (value in million £s):

EXPORTS IN EXCESS.

	Exp'ts.	*Imps.*	*Diff'e.*
British India	32.05	5.86	26.19
Canada	9.49	5.13	4.36
Mauritius	3.08	0.83	2.21
B. Gui., Ceylon and others unnamed	11.76	5.91	5.75
Colonial	56.24	17.73	38.51
United States	88.12	41.53	46.59
Russia	54.22	13.22	41.00
Austria-Hungary	22.85	11.89	10.96
Spain	12.37	4.69	7.68
Denmark	7.82	1.80	6.02
Italy	13.22	9.41	3.81
Egypt	2.93	0.24	2.69
Portugal	2.97	2.42	0.55
Greece	1.82	1.46	0.36
China	11.11	10.90	0.21
Other than British exporters	217.43	97.56	119.87
Total exporters	273.67	115.29	158.38

IMPORTS IN EXCESS.

	Imps.	*Exp'ts.*	*Diff'e.*
United Kingdom	174.66	20.89	153.77
Victoria	3.84	1.87	1.97
New South Wales	2.62	1.06	1.56
Cape Good Hope	1.64	0.20	1.44
N. Zealand, Queensland, Lagos, Natal.	2.47	1.38	1.09
United Kingdom and Colonies	185.23	25 40	159 83
France	65.21	27.67	37.54
Hamburgh*	25.54	....	25.54
Germany	44.97	25.20	19.77
Belgium	21.17	7.04	14.13
Switzerland	12.92	2.49	10.43
Holland	23.73	19.55	4.18
Sweden	4.87	3.03	1.84
Norway	3.66	2.03	1.63
Other than British importers	202.07	87.01	115.06
Total	387.30	112.41	274.89

* Receipts at Hamburgh for distribution to Holland, Germany or Belgium, or all.

Aside from the unique character of this exhibit, the estimates of value, etc., being largely made for the purpose of obtaining a basis on which a comparison can be made rather than to indicate the cost of the articles themselves, the coincidences observed in the grand totals are most conspicuous. It will be noted that the aggregate of value of food products imported by countries which export more than they receive from abroad approximates closely to the total of values of food products exported by countries which call for more food from abroad than they send out; and that the sum of the differences between the values of imports and exports in the second column (importing nations) is very like that of the aggregate of exports from nations which have a surplus of food to sell. The aggregate value of receipts of food in importing countries is likewise shown, with its added value for carriage and commissions.

But the point which thrusts itself onto the mind of the British student is that the balance between the food exports and imports of the enumerated countries other than British shows a difference in favor of the exporters of but £4,810,000 in value, while for the British empire the balance is £121,320,000 on the side of imports.

The importance of the international trade in food products may be best observed by comparing the above totals with those taken from a similarly-arranged table, made with reference to exporting and importing countries in commodities other than food products (value in millions £s):

	Expts.	*Impts.*	*Diff'e.*
Merchandise exporting (British)— United Kingdom, New South Wales, Victoria, Tasmania, Queensl'd and Lagos	288.02	243.43	44.59
Food exporting— British colonies (as in first table)	56.24	17.73	38.51
	Impts.	*Expts.*	*Diff'e.*
Merchandise importing— All countries named as exporting food countries (except Tasmania)	94.73	68.38	26.35
Food importing countries— United Kingdom and British colonies (as in first table)	185 23	25.40	159.83
Merchandise export'g (other than British)— Germany, Egypt and United States	219.47	200.94	18.53
Food exporting— As in first table	217.43	97.56	119.87
Merchandise import'g (other than British)— Importing countries	502.67	329.47	173.20
Food importing— As in first table	202.07	87.01	115.06
Total (British and foreign) exporters— Merchandise	507.49	441.37	63.12
Food	273.67	115.29	158.38
Importers— Merchandise	597.40	397.85	199.55
Food	387.30	112.41	274.89

This renders it plain that at least one-half of the international commerce of the world, as far as reported, depends upon the distribution of and demand for food, and in respect to which the commerce of the United Kingdom for reasons specified, as expressed by Mr. Bourne, is suffering, owing to restricted foreign markets for its wares while obliged to buy foreign food. Mr. Bourne, in brief, thinks that the mother country should enter on further colonization schemes in India and elsewhere where the soil awaits the plow, and so supply its own wants for food while creating a market for the products of the British manufactory.

SOCIALISTIC TENDENCIES IN GERMANY.

The letters of our Berlin correspondent have drawn attention to the strong socialistic tendency which during late years has marked the attitude of the ruling powers in Germany in regard to matters of internal concern. This tendency has been strikingly manifested in the extensive purchases by the Prussian government of lines of private railways. In 1876, according to our correspondent's figures, the state owned 27 per cent. of the total mileage. During the succeeding five years, especially in the last two years of the period, the policy of converting private into state railways was carried on with so much vigor that, at the beginning of 1881, the state owned 57 per cent. of the total mileage. This policy of acquisition has since been steadily pursued, and at present the Minister of Railways is negotiating with the managers of the principal yet existing private railways, with a view to the purchase of them by the government. To such an extent indeed has the existence of this policy become a recognized fact, that the principal movements on the Berlin Stock Exchange at present are owing mainly to the circulation of reports regarding the government's plans for the purchase of particular private railways, or the offers made to the companies in pursuance of those plans; speculation in the shares of the companies becoming more or less animated in proportion to the reported offers. It is somewhat curious to notice the change which has come over the government's way of looking at the railway question during recent years, a change probably due to the growth in power of the democratic elements in the state. The purchase of private railways, or the construction of railways by the state, was formerly justified on strategical grounds, stress being laid on the necessity of being able to transport large bodies of troops quickly, in case of necessity. Of late, however, the supporters of the government policy have based their justification of it on other grounds. They now declare it to be an anomaly that extensive and important routes should be the property of private companies, that the price of the transportation of people and goods should depend on their will and favor, or even that the safety of the lives and property of citizens should be intrusted to their control. It is urged in addition that the possession of the railways by the government will render a more economical service possible, and will enable the government to fix rates not solely with reference to the dividend-paying value of railway shares, but principally with regard to the development of commerce and industry. It is well understood that the policy which has been carried out so far in Prussia is not to be confined to that kingdom, but that upon the completion of the system there, a project will be brought forward for the purchase of all German railways by the empire.

It is not alone in respect to the railway question that the tendency to which we have referred to is manifested. The Accident Insurance bill, providing for the compensation of workmen in case of accident in manufactories and mines, is a strongly socialistic measure. What was not less significant than the features of the bill itself, was the declaration made when the bill was first moved that it was the government's intention to do away with private insurance companies. Of late the government organs have shown a hostile spirit towards the fire and hail insurance companies. Some charges have been made against the management of these companies, and the partisans of the government projects have made the most of them as arguments in favor of state insurance. It is even said that the life insurance companies, whose management has been in the main remarkably free from criticism, have attracted the attention of the government, and that an effort will be made to absorb them also. Not the least remarkable of the socialistic schemes projected in Germany of late is that mentioned by our correspondent in another column, namely, an imperial institution for the support of all who have become unable to work and who are without means of subsistence of their own.

The existence of this strong socialistic tendency in what has been for over a decade the most influential country in Europe is among the most interesting facts of the time. The current had begun to set in the direction it has since taken before it was recognized by the chiefs of the state, but there can be no doubt that much of its present strength is due to the influence of Bismarck, whose economic principles have undergone a marked change within the decade. That remarkable man was formerly an adherent of the doctrines of the English school of political economists, but at present his favorite counsellor on economic subjects is among the most radical of the professorial socialists. Bismarck's sincerity has been questioned, but all speculation upon that point must of necessity be profitless. He has at all events a consistent theory upon which to justify his adoption of socialistic principles. In the discussions on the law for the repression of the socialists he declared that he did not expect to cure the masses of the disease of social democracy by repressive measures alone. Something more was needed, he said, than external remedies. The social democrats, he said, had built upon well grounded discontent of the people and he proposed to win back the masses for king and fatherland by removing the grounds of discontent, which latter he declared to be of an economic character. And later, in the "motive" accompanying the Accident Insurance bill, he declared that it was not only a duty demanded by humanity that the state should care for its poorer members in a higher degree than it had formerly done, but that it was a measure required for the preservation of the state. A sound policy, he said, should nourish in the indigent classes of the population, which are the most numerous and the least instructed, the view that the state is a beneficial as well as a necessary arrangement, and that legislative measures should bring them direct, easily perceived advantages. In other words the state, in order to exist in modern times, must take account to a degree not before necessary of the needs, sentiments and aspirations of its poorer classes—that is of the great majority of its citizens—and must endeavor to satisfy them to as great an extent as possible. But the adoption of any such principle, it will be seen, opens the way to a vast and practically limitless field of state activity, and one in which the experience of the past has little to offer by way of guidance. Whether even Bismarck will be able successfully to apply this principle in the field of practical legislation remains to be seen.

CONSULAR REPORTS.

In the October number of the Consular Reports are found the questions submitted to the Sandwich Island sugar-planters last June by Ellwood E. Thorne, of New York city, together with the answers thereto. In view of the interest which has been excited on the subject of the alleged fraudulent importation of Hawaiian sugars on the Pacific coast, either as to colored sugars or sugars not Hawaiian imported as such, the replies made at a full meeting of the Hawaiian Planters' Labor and Supply Company, July 19, will warrant condensation. It was stated, in substance, that no Hawaiian sugars are subjected to artificial coloring, and that the natural outturn as to their color is from No. 6 to 16, Dutch standard. Previous to 1876 (the passage of the treaty) the grades were 6 to 20, which were known in the San Francisco market at that time, where they were sold as grocery grades and so polarized. No muscovado or brown sugar (made in pan and dried by gravity) has been made in the islands for twenty-five years, drying by centrifugals having been introduced in 1852. Vacuum pans were used first in 1863, and double and triple effects were introduced in 1879. Before 1879 the grades turned out by open pans and centrifugal drying were 14 to 20, Dutch standard; since they have been 12 to 15, and previously the grade was explained to have been as much above No. 10 as it was possible for the grocers' trade. No new article of sugar has been produced by the changed process, but the cost of making has been reduced. There are no refining processes used in the islands. Lime is used in making the sugar, which it discolors. The average yield per acre of plant cane is 3¼ tons; of first rattoons, estimated, 2 tons; of second rattoons 1½ tons—very little cultivated. An extraordinary yield is 6 tons to the acre. The company said it was impossible to give the cost of production of sugar per pound. The rates of interest there are 7 to 10 per cent. and the wages of laborers $17 to $30 per month, labor always being scarce.

It was further explained that the present inducement for extensions or improvement of plantations are very poor. No survey has been made of the area of cane growing, although one has been proposed. The limit of production was said to be about 80,000 tons per annum. The islands exported about 13,000 tons before the treaty. The stimulus since was, of course, the treaty provisions and the influx of capital mostly from the United States. The sugar was sold in San Francisco on the basis of Manila and in New York on that of Cuban centrifugal.

The price is made as follows: On Manila, cost of extra superior laid down in San Francisco 91° and 10 Dutch standard. In New York, cost of 96° per Cuban centrifugal. The price includes the duty, which consumers in San Francisco (or elsewhere) pay.

The French watch trade, it appears from the Besançon Chamber of Commerce reports (so reported by Consul George W. Roosevelt, at Bordeaux), is in a fairly flourishing condition. In 1875 the number of watches turned out was 426,916, of which 139,624 were of gold and 285,292 of silver, while during the past year the total production was 493,943, of which 172,716 were gold and 321,227 silver. The average value of a gold watch is estimated at 85 francs, and of a silver one 25 francs, which brings the value of the trade for 1882 to 22,711,535 francs; of this, about one-half goes to labor. The importation of foreign watches was 92,710 in 1881, and 76,922 in 1882. The first commencement of the Besançon industry dates from 1793, when 411 skilled artisans from Neufchâtel were expelled from Switzerland and settled in the department of Doubs. At the present time the number of employers is between 190 and 200, while some 40,000 persons find occupation in watchmaking, either in the shops or at their own homes.

An article which appeared in the Mexican *Financier* some time ago regarding property rights in Mexico, especially those of foreigners, and which are often found of a precarious nature, is forwarded to the State Department at Washington by Consul W. P. Sutton at Matamoras. He supplements it with an article on the same subject, but in rather more detail, by an American lawyer at the City of Mexico, and the same will of course be very valuable reading matter to persons contemplating doing business or residing in Mexico. In reference to the supplementary article referred to Mr. Sutton says: "In his recapitulation the lawyer says that foreigners may purchase, hold, transfer, etc., lands anywhere in Mexico equally as well as Mexicans, excepting lands of the public domain. They may have the right so to do, but it is not practicable. I am informed that it is required of all notaries before whom deeds for lands on this frontier are executed to recite in the opening of the instrument the residence and nationality of the parties, and, if the purchaser be a foreigner, to insist upon the production of his permit before proceeding. Also, that the fact of such permit (referring thereto as being then produced) should be recited in the deed, giving the date of its issuance. I have been informed that without such declaration the title may be legally declared void. At least it would leave the title in grave doubt, and that alone would prevent such transactions. It is also quite probable that notaries would refuse to execute deeds unless these provisions were obeyed."

Minister Foote, at Seôul, Corea, under date August 21, writes that the government there is an absolute monarchy, all power vesting in the sovereign. He has three prime ministers, who hold office for life. There are numerous private schools, but no general school system. Nearly all the common people can read and write the Corean language. In this language there are many simple books, but the learning of the country is the learning of China, and the better classes are well versed in Chinese literature. The titles to land are derived from the government, and are carefully registered in local offices; the tenure depends upon the payment of taxes, which are levied in kind and are onerous by reason of the unrestrained exactions of officials. The only coin of the country is the copper cash, 525 of which are equivalent to one Mexican dollar. The roadways are narrow bridle-paths, the only wheeled vehicles being two-wheeled carts, which in some places are made to transport merchandise. Bulls and Corean ponies are used as pack animals. Persons of means and distinction travel on horseback or in sedan-chairs. Inns are scarce and incommodious, but the people are said to be kind and hospitable. Post offices are established in the principal towns, and at some places on the public highways the government maintains stations with post-horses for public use. According to official accounts there are 1,300,000 enrolled militia in the country, but they are unaccustomed to drill and are without arms. The territory of Corea is bounded on the north by the Shan-yan-alin mountains, and two large rivers which take their rise in these mountains. The one known as the Am-no-kan, flowing westward, empties itself into the Yellow Sea, and forms the natural boundary between Corea and China; the other, known as the To-man-kian, flowing eastward, empties itself into the Japan Sea, and divides Corea from Manchuria and the Russian territory. The products of the central and southern districts are rice, silk, cotton, hemp, tobacco, wheat, corn, barley, beans, millet, dyewoods, fruits, vegetables, cattle, and hides. Among the manufactures are silk, cotton and linen cloths, iron and stoneware, pottery, hats, shoes, paper, mats, fans, screens, combs, pipes, brushes, tiles for roofing, certain kinds of furniture, mechanical and agricultural implements, etc. Some articles exhibit a degree of excellence, but the majority are rude and primitive. Cloths are woven in hand-looms, and pottery is made by the use of the wheel. Specimens of old bronze and porcelain are occasionally found, showing that in the past a higher degree of skill existed.

OCCASIONAL NOTES.

The conduct of the government of Mexico in dealing with her finances has heretofore called forth some very severe criticism from London financial journals. The outcome of the recent negotiations between the representative of the Mexican government and the committee of the council for foreign bondholders has not, it appears, been such as to improve Mexico's standing in the British loan market. The *Economist* says that there now appears to be an end to the negotiations altogether. That journal charges that throughout the course of the proceedings the bondholders' committee has been kept in the dark by the Mexican representatives. The refusal of the Mexican government to comply with the demands of the English bondholders for an issue of twenty millions of 3 per cent. bonds in addition to the debt of eighty millions was first made public through a Reuter's telegram. The *Economist* says that the committee has been too reticent all through the entire negotiations, and that already there is considerable dissatisfaction with the conduct of the council in other affairs. The journal mentioned hints that it is said, not without reason, that as the council looks for a commission on the settlement it effects it is apt rather to aim at effecting a settlement of any kind than at effecting a satisfactory settlement. The whole matter, says the journal quoted, has been a bad business all the way through, and that the proceedings under discussion only add another illustration of the faith of Mexico, which has already passed into a proverb.

In a trust deed prepared under Mr. George Peabody's supervision in 1869 the hope was expressed that the fund given by him for dwellings for the poor might be so progressive in its usefulness that within a century the annual receipts for rents for buildings of the improved class might present such a return that there might not be a poor laboring man of good character in London who could not obtain comfortable and healthful lodgings for himself and his family at a cost within his means. It would seem as if Mr. Peabody's wish were in a fair way of realization. There are now numbered among the Peabody buildings 3,533 separate dwellings which are occupied by 14,604 persons. The net gain from rates and interest during the year 1882 was £24,000. In most of the districts in the city of London there are already Peabody blocks in existence and others are constantly being built, the money as fast as it comes in going out for the construction of new blocks. The buildings are in great demand, the applications exceeding the number of tenancies available by more than two to one. Apartments may be had at prices ranging from 2s. 6d. (62½ cents) per week for a single room to 7s. 7d. ($1.87½) per week for four rooms. Among the payers of Peabody rents are included policemen, peddlers, soldiers, laborers, artisans of almost every variety, and widows and spinsters who make a living by the humbler sort of occupations. The average weekly earnings of the head of each family in residence is 23s. 6¼d., about $5.88. Notwithstanding the difficulties inseparable from an attempt to keep premises of this class orderly and clean, the superintendents have been largely successful in rendering them neat and quiet places of abode.

A legal correspondent of the Manchester *Guardian* writes to that journal regarding the new rules of procedure in England, which, he says, have greatly abridged the delays which used to be proverbial of the law and have introduced common sense methods instead of the cumbrous technicalities which formerly were the delight of old "black-letter" lawyers. The principle at the root of the reforms introduced by the new rules are the sound ones that litigation should not be kept up merely for its own sake, that delays are dangerous as well as costly, and that the prime object of a civilized system of legal procedure should be to bring the parties to trial as soon as possible. Under the new rules trial by jury is discouraged. Except in particular cases the general rule is that a trial will be held before a judge alone. When a prolonged investigation of accounts is involved this is the only tribunal. In ordinary cases, however, a trial by jury may be applied for by either party. Experience shows that in the county courts where only a small fee is charged, trial by jury is rarely required. The tendency of recent legal changes has been in the direction of giving the courts more and more power over the costs of litigation, a circumstance which must afford matter of discouragement to pettifoggers, of whom there is always a fair contingent at every bar. The new rules, however, do not seem to to have in any way injured the lawyers as a whole, for according to the *Guardian's* correspondent "never was the business of solicitors as a body more flourishing or the fortunes made at the bar larger."

Some interesting statistics regarding the condition and prospects of technical education in England and the continent of Europe were given in a paper read recently before the Manchester Statistical Society by Mr. John Slagg, M. P., the newly-elected president of the society. From figures given in his address it appears that the whole number of persons in receipt of art instruction under the agency of the Department of Practical Art in England during the year 1882 was 909,216. In the year 1881 there were in England 160 schools of art, with 11 branch classes and a total of 31,592 students. There were, further, 584 art classes, with 23,026 students, 5,097 elementary day schools, at which 850,563 children were taught drawing, and 48 training colleges, where 1,062 students obtained drawing certificates. The

cost of instruction in the schools of art amounted to £1 18s. 6d. per head. Instruction in the art classes cost about 5s. 6d. per head. The education of the children in the elementary schools cost less than 10d. per head, and that of the students in the training colleges entailed a cost of 9s. 2d. per head.

Mr. Slagg said that technical education was, in most countries of Europe, still in its infancy. Art education in England dated back to the year 1836, when schools of design were established in a few of the principal towns. In France technical education has made considerable advances. Probably no country on the continent can vie with France in the extent and liberality with which support is granted to every branch of the fine arts. In that country the administration of the large sums annually voted for these purposes are confided to a separate department. The total amount voted for the fine arts in 1882 was £339,582; this was less by £6,500 than the amount expended for these purposes in England. In Belgium a special appropriation was made for the cost of technical and art instruction. In Saxony the total amount spent on technical and artistic instruction was $58,909. Prussia has as yet done little for technical education, the total state grant for this purpose amounting to only £17,000. The authorities however are fully alive to the deficiency in this branch of national education, and plans are already being discussed by a state technical commission for the extension of existing facilities and for the establishment of schools and classes for the study of applied science and technology. In Austria there are six polytechnic schools, and the number of students is 2,729. The total annual expenditure is £65,496. Special industrial schools are widely distributed throughout Austria, and are devoted to the teaching of weaving, joining, carving, pottery making, filagree work, marble cutting and polishing, glass making, toy making, and a number of other industries. Switzerland stands in the foremost rank for the excellence and abundance of her schools. The speaker pointed out how large were the sacrifices made by foreign nations in behalf of education. The cost of the schools referred to is partly borne by the state, and partly by the municipality, and the fees charged to the students are in all cases extremely low.

A feeling in favor of free trade appears to be growing in the South Pacific. The commissioners appointed to take evidence and report on the tariff of Victoria have recommended very considerable reductions in duties upon a great variety of articles, such as nails, machinery and the manufactures of metals of the more useful kind. Increases of duty are recommended on sheet, piping and pig lead, cast-iron pipes, fencing wire, agricultural implements and a few other articles. The alterations proposed include remissions on duties to the amount of £200,390, reductions amounting to £13,950 and modifications lessening the revenue by £800, the total loss being £215,140. It is estimated that a gain of £216,000 will be made by the alterations, namely, £37,800 by the modifications, £44,300 by increases, £11,900 by new duties and £122,500 by the alterations in the excise. The commissioners recommend negotiations with a view of making a beginning in the direction of intercolonial free trade, though the criticism is made in the report that the manufacturers who are asking for it have not arrived at a clear or definite idea as to what they mean by intercolonial free trade. It seems that the colonists have begun already to be affected by the luxurious notions that come to all people in the fullness of time. A strong prejudice exists, it is said, against colonial-made articles, the purchase of these being regarded as "unfashionable and a sign of meanness or poverty."

SPECIAL CORRESPONDENCE.

STATE SOCIALISM AT BERLIN.

Berlin, November 7.—One of the socialist projects planned by Prince Bismarck is an imperial institution meant to support all those who, owing to advanced age, have become incapable of work and are without means of subsistence of their own. A most magnanimous idea, certainly, and worthy the sympathy of every philanthropist! The only pity is that the great statesman has not yet revealed—nay, not even hinted at—how this humane purpose is to be carried out by government in an empire of some 40,000,000 inhabitants, the majority of whom have to struggle hard to earn their daily bread when in the prime of life, in an empire where, on the instigation of the Chancellor, the importation of the chief necessities of life—namely, corn, meat, butter, lard, eggs, etc.—is subject to a tax, in order to pay public expenses. Whilst this socialist project of Prince Bismarck is still a pious wish without solid foundation—like the one expressed some years ago in the Imperial Parliament concerning the remittance of all taxes for incomes up to 6,000 marks ($1,500)—the government of little Denmark, with 2,000,000 inhabitants, has, in the course of the last few days, brought in a bill for the establishment of an institution for pensioning off old workmen.

This is no new idea there, the Danish government having already taken this matter into consideration eight years ago. A commission was then appointed for instituting inquiries into the state of affairs among the workmen, taking into consideration, along with other things, how to provide for superannuated workmen. There were two leading principles represented in the commission; the majority were for a *voluntary* institution, the minority for an *enforced* one. The minority opined that, if enforced, the institution would do all classes good, not only the clever and persevering workmen, but the real proletarians as well. Besides this, compulsory measure would only be a means of educating the people to economy, just as once the people had to be forced to insure their property against fire, till they understood the advantages of this institution. The majority, on the other hand, were of opinion that the advantages of compulsion would not be equal to its disadvantages. This tutorship on the part of the state would, not to say anything of the difficulties of control and management, lessen the saving economy of the individual and destroy the feeling of independent responsibility; besides, in case of enforcement, one would be obliged to overburden the workmen with heavy taxes, which would involve the danger of depressing the better and more deserving workmen down to the proletarians, whereas, on the contrary, one ought to endeavor to raise the lower classes. As in general it would be difficult for the workmen themselves to provide a support for their old age through their own work, or by mutual association, the idea arose that government should make up the sum required, and should be taken into consideration whether the state could not give so much from their funds that the poor, in case they made any effort to save something, should be enabled to buy a sufficient annuity as soon as they felt the weight of age pressing them down. In this or the like way a sufficient result might be attained, according to the opinion of the majority. A proposition for establishing an institution for poor superannuated workmen, drawn up by the majority of the commission, based upon the support of the state, forms the nucleus of the motion now proposed to the "Folkething" (second chamber of Parliament) by the Danish government. The chief contents of the bill are as follows:

An institution for cheaply providing annuities, guaranteed by government, is to be constituted. At the moment of establishment government is to pay 2,000,000 Danish crowns ($562,500) as a support. The state too bears the expenses of the establishment as well as the management of the same. Any person of either sex, from 18 to 45 years of age, in so far as they have a claim to the support in the kingdom, and not receiving alms, can join this institution. On entering, the person is required to declare for how long and when he means to pay contributions, likewise the amount, but he is not obliged to fix these equally. He is also entitled to pay his contributions in advance and to raise the amount once during the time of his contributing, but before reaching his forty-fifth year.

These contributions are put out at interest at 2 per cent. for six months, and are to be spent in buying annuities. If this is not done, the contributions are repaid with interest and compound interest. As soon as the member has completed his fifty-fifth year an annuity is bought with the collected contribution, increased by an addition from the supporting fund, either for himself, or if married, at his request, for himself or his wife, if she survive him. The addition from the supporting fund is fixed at a certain percentage of the collected contributions, according to the regularity of the payments, and amounts to 50 per cent. of these contributions, if they have been paid regularly. The contributions, with an addition of 50 per cent., must not be higher than required to yield, after the fifty-fifth year, an annuity not exceeding 200 Danish crowns ($56). In case the community where the member lives, or the one obliged to support him, add to his contributions, or in case his master or some workmen's union pay in addition at least one-fourth of his contribution, an annuity up to 300 crowns ($84) can be bought for him. If from the savings, with the addition, an annuity of at least 10 crowns cannot be purchased, the savings with the additions are repaid on the day from which the annuity ought to have begun. If the member should die before the annuity be bought, his contributions with interest and compound interest will be repaid to his heirs. But if the deceased had become a member at least a year before his death and if married, his widow is entitled to receive support up to 200 crowns a year. The management of the institution, which belongs to the financial department, can free the member from contributing when his capacity for work has been weakened or destroyed, and buy an annuity for him at once. The annuities can neither be given away, sold, pawned nor seized for debt, and cannot be subject to any tax whatsoever.

In the motives given it is said that the bill is meant in the first place for workmen and poor people, and that the small amount obtainable is intended to exclude those who are not entitled to it. Further, it is stated that when the 2,000,000 crowns which government is to pay have been spent, and things go on as expected, the state is to continue their additions.

The retrograde movement which suddenly appeared on the Stock Exchange here continued during the first week of this month, though not with the same energy, still with the same persistence. The leading papers of speculation fell from 1½ to 2 per cent., and most of the other papers suffered likewise from the depression; even Prussian consols on some days fell a fraction lower. The impulse to the reaction was given—a point upon which I laid stress already in my last letter—by some business reports of important Rhenish-Westphalian mining works, which did not complain so much about the business of the immediate past and the existing present, as they expressed a fear that the export to foreign countries was threatening to come to nothing. Considering that the production of raw iron in Germany has increased the last five years, from 1877 to 1882, by 86.3 per cent.—whereas in England, during the same period, it has only increased 28.5 per cent.—this fear is not unfounded. However much, in consequence of the protectionary duties, the consumption of German products in Germany has increased, however great the hopes raised by the demand of the Prussian government for the railways now given up to the state, still, if the iron production should be continued at the same rate as now, there will not be a sufficient sale for it if foreign demands, especially from America and Russia, continue as small as they are now and as they are very likely to be for a time. Therefore there is no other alternative but to reduce the production, unless we mean to accumulate unsaleable stores, or sell them under price. This fully accounts for the falling of the Rhenish-Westphalian mining companies' shares. The simultaneous falling of the Upper Silesian mining companies' shares is less justifiable, as they rely principally on home consumption, the prospects of which are not bad, at least business reports from the Upper Silesian mountain districts continue favorable; but it is only too natural that the justifiable falling of the papers of one district should have an influence upon the price of similar shares in another, though more favorably situated, part of the country. It is perfectly clear that the shares of the great banking-houses that extend their activity over the whole empire must fall somewhat, as soon as in any province a calamity is threatening; but it is unintelligible why also the shares of industrial institutions should fall that are in no connection with the iron trade, and have given no reason for other fears. But for all this the fall in prices has affected in many cases the good and the bad indiscriminately, as it happens when once a justifiable fear on one point has arisen. The fright that the before-mentioned bankruptcy of the great forwarding agents and foreign carriers, Widow Rosenthal & Company, might cause other bankruptcies, as if being but a symptom of an unhealthy state of business, has proved perfectly unfounded. This business has suffered no loss in their legitimate business, but has provoked bankruptcy entirely by unfortunate speculation on the Stock Exchange. Besides, it is expected an arrangement with their creditors will be made in a short time. The stoppage of payment of an important corn dealer here (A. Muscat), a few days ago, who likewise caused his difficulties at the Stock Exchange, seems likely to be arranged also without the aid of the bankruptcy court.

My principal reason for taking a more cheerful view of business in Germany than might seem reasonable after the last falling of stocks on the Exchange is the result of examining the statistics of exportation in September. I find in this, in comparison to the last two months, a considerable improvement in the different branches of textile industry, in chemicals, in glass and paper wares, ready-made dress, and even in one branch of the iron trade. For articles in leather, too, exportation has become more lively, also manufacturing of machinery shows some progress. A decrease of exportation in September is most noticeable in iron rails and in wire articles, in consequence of lessening demands from America. Exportation of half-silk goods has declined, in consequence of change of fashion. A comparison of the whole exports from the 1st of January to the end of September of this year with the exports of the corresponding period last year shows, with a few exceptions, nothing but an increase, and very often a considerable one. I will only quote some few articles for the period from January 1 to the end of September—figures given in 100 kilogrammes:

	1883.	1882.
Cotton goods	108,063	114,354
Hosiery	47,004	45,660
Woolen goods of all sorts	184,708	179,174
Clothing and linen	41,920	39,757
Raw iron	1,882,103	1,408,908
Iron rails	1,350,255	1,270,985
Forged iron	1,118,220	1,008,543
Iron wire	1,569,859	1,675,344
Iron ore	13,782,513	11,901,880
Locomotives and portable steam engines	101,059	98,834
Other machines	572,692	529,121
Copper, brass and nickel wares	43,050	42,237
Coals	62,251,826	54,349,114
Leather goods	89,335	93,670
Flour	997,383	903,752
Sulphate of potash	714,761	677,120
Green and white bottle glass	470,031	399,594

In contrast to the Stock Exchange, the Corn Exchange is firm and prices are rising. Since the first inst. the price of wheat has risen on an average about three marks and rye one mark per 1,000 kilogrammes. The other cereals, though they have not risen in price, are very steady. Most of the other German markets, too, show an improvement in corn business. Vienna and above all Pest, announce a brisk trade in wheat with rising prices for ready stores. Offers for rye from the north of Russia are already scarce, the close of the shipping season being expected. During the last fortnight about 3,000 cwt. of wool has been sold here at a rate of 171@195 marks ($42.75@$48.75) per cwt. The stores are moderate here, and a great supply cannot be expected, as stores in the provinces are likewise small. In Pest, last week, great quantities of wool have been sold at increasing prices. The hop business is lively at Nurembergh and the other German markets. The total products of Germany are rated at 430,000 cwt., so that, the yearly consumption of Germany averaging about 320,000 cwt., more than 100,000 cwt. would be exported. The entire yield of hops in Austria-Hungary amounts to 91,000 to 92,000 cwt., in Belgium to 110,000 cwt., 40,000 cwt. being consumed in the country. France produced 40,000 cwt., Russia the same—both countries will hardly be able to export anything. Meat has been dearer here the last few months, the retail price has risen on an average 5 pfennige (1¼ cents) a pound, so that consumers regret all the more the prohibited importation of American pork.

MICHIGAN.

Ann Arbor, Mich., November 22.—It is only within a very few years that the great resources of the State of Michigan have come to be held at their real value. Indeed, it may be said that its childhood was feeble, and that its prospects were thought to be very unpromising. But the recent census shows that it has not only outgrown its juvenile feebleness, but has actually taken a prominent place among the most important of the states.

There were several reasons for the slowness of Michigan's early development. The heart of the state was at one side of what were then the great lines of travel. Its attractions were more remote than those of Indiana, Illinois, and even the still more western states. The open prairies of the vast regions stretching away to the southwest offered a speedier return to the enterprise of the new settler. Then, too, the Peninsula State had to contend against what may be called certain conspiracies against her. The first of these was by the surveyors. At the close of the war of 1812 the federal government sent out an official to look over the state and report whether the territory would afford suitable bounty lands for the soldiers of the late war. The report was most unfavorable. As one looks it over at the present day, it is hard to resist the conclusion that the surveyors never advanced beyond the eastern borders of the state. The territory was represented as a succession of swamps and sand barrens quite unfit for the habitation of civilized and patriotic human beings. The consequence was that what afterward came to be proudly called the Beautiful Peninsula suffered the fate of the man who fell among thieves. Both pensioners and immigrants passed by on the other side and took up their abode on the inviting soils of other states.

This general tendency was also encouraged by the early railroads. Their great object seemed to be to carry people through the state. In general, the railroads, for very natural reasons, are interested in carrying people to the remotest points

possible. In Michigan this interest was doubly strong. Long before the roads offered any facilities for reaching the central and northern parts of the state there were three trunk lines that rivaled each other in the inducements they offered to settlers in Wisconsin and the states still further west. Here were reasons enough why the early growth of Michigan was so slow. These facts make it all the more interesting to note the causes that have led to the subsequent great advancement in the relative position of the state.

Until recently Iowa and Wisconsin stood above Michigan in relative rank; but within the past decade they have both fallen behind their eastern neighbor, not only in point of wealth, but also in point of population. Michigan has now passed all of the states which forty years ago did not exceed it by more than 80 per cent.

In area the state has 9,745 square miles more than New York, and has only 7,550 square miles less than the whole of New England. It has a coast line of 1,600 miles, fully half the distance from New York to Bremen. Its northern boundary is the largest body of fresh water in the world; its western boundary is the second in size; while the lakes on the east are not exceeded by any in Europe or Asia. Lying within the influence of these immense inland seas its climate has no equal in the moderation of its temperature in any state or territory of the same latitude east of the Rocky mountains. This is the special peculiarity that has made its fruits so widely and so favorably known. The average product of wheat per acre is greater than that of any other state except Colorado, the total product of which is not equal to that of one of our counties, and the aggregate amount grown is exceeded in only three other states. The value of iron ores produced in 1882 was greater than that produced even in Pennsylvania. Next to Chili, Michigan is the chief source of the world's supply of copper. The dividends paid by the mining companies of Michigan in 1881 exceeded those paid by the mining companies of either Arizona, California or Nevada. Michigan produces more lumber, more salt, and more fresh-water fish than any other state. Its charitable institutions are well managed and bountifully provided for; its system of education is unexcelled, even if equaled, and the state treasury has money enough to pay all its debts. Such are the factors which, in spite of its inauspicious beginnings, have carried the state past so many of its fellows and made it in point of population the ninth in the Union.

But let us descend from generalities to particulars First, in regard to natural peculiarities. With the exception of a few small prairies in the south and some unimportant plains in the north, the state was originally covered with dense forests. The surface is agreeably undulating, at no point in the lower peninsula rising to an altitude of more than 600 feet above the surrounding lakes. None of the rivers are navigable, though very many of them are of great use in floating timber from the forests to navigable waters. Along the eastern border of the state there is a belt of low land that is not especially attractive to the immigrant; but as the trees have been cleared away the soil has become dryer, and good crops are the general result of good tillage. In the interior there are not a few tamarack swamps. These were formerly the opprobrium of the state, but within the past few years many of them have been reclaimed at a trifling expense, and have taken high rank among the most productive lands. In many instances the first crop of hay has paid for the land and all its improvements, so that what formerly was a bugbear to immigrants has become a very considerable source of wealth. The soil is generally of drift formation, and varies in composition from a strong clay to light sand, shading from one to the other by slight gradations through a fertile loam. An analysis of the soils in different parts of the state has been made at the Agricultural College, and the result has shown that even the least fertile portions of the territory contain all the requisite ingredients of successful husbandry. The soils contain unusual proportions of potash, lime, phosphoric acid and sulphuric acid, and therefore the analyst confidently predicts a rank growth of vegetation. This prediction is justified by the simple fact that of the eight leading productions of the farm in the ten principal farming states of the west the average value of the product per acre, according to the Department of Agriculture, has been greater in Michigan during the past six years than in any other state.

The forests are mostly of hardwood. The abundant varieties are oak, elm, ash, cherry, hickory, walnut, maple and beech, with some admixture of basswood, whitewood and other less important species. In many parts of the state these forests are still almost unbroken; and besides yielding an abundant supply of fuel and timber they exert a beneficial influence in equalizing the rainfall and preventing drouths and floods.

In the central and northern parts of the state are found the most celebrated pine forests of the continent. The more or less general impression that these forests are made up of pine exclusively is an error. Indeed the pine lands in all parts of Michigan differ from those of the southern states in the fact that pine is here everywhere intermingled with the hard woods.

It was formerly supposed that pine lands were practically worthless for agricultural purposes, but recent experiments have shown that some of the most sandy lands have excellent agricultural capabilities. The counties of Sanilac and Huron, lying in the eastern part of the state, were thought to be too sterile for farming lands, but the grains put into the cleared spaces about the lumber camps grew with such thrift as to convince the owners that after the lumber was cleared away a judicious tillage of the soil would yield profitable returns. According to the Census Report for 1880, the yield of wheat in those two counties of pine lands was 922,220 bushels, produced at an average of 16.41 bushels per acre. This yield will appear at its true significance when compared with the average product per acre in other regions. According to the same authority the average yield in Illinois, the largest producer of wheat, was during the same year, only 15.9 bushels per acre, while in Minnesota it was only 11.4. In the state of Michigan, as a whole, the average yield was 19.5 bushels, while in Indiana, where the production approached nearest to that of Michigan, it was 18.1. From these figures it is obvious that even the poorer lands of Michigan will compare favorably, at least in the production of one of the most important staples, with the average lands of some of the adjacent states.

In consequence of this new information in regard to the productiveness of Michigan soils, and because of new and abundant facilities for reaching the central and northern portions of the state by rail, agricultural interests have very greatly advanced within the past decade. The relative improvement of the state in this direction may be inferred from a few figures taken from the compendium of the last census. Under the head of "Total Land in Farms," New York is represented as having 23,780,754 acres; Ohio, 24,529,226; Indiana, 20,420,983; Illinois, 31,683,645; Iowa, 24,752,700, and Michigan, 13,807,240. According to the same authority the average value of these farms per acre is as follows: New York, $44.56; Ohio, $46.02; Indiana, $31.13; Illinois, $31.80; Iowa, $23.60; Michigan, $38.38. Thus it appears that although Michigan as yet has a less acreage of "Land in Farms" than its neighboring states, in point of average value per acre it is exceeded by New York and Ohio alone. The prediction seems to be amply warranted that as the forests gradually disappear the agricultural importance of the state will become more and more apparent. If its other sources of wealth, now so conspicuously abundant, should ever come to be exhausted, there will still remain that surest of all means of prosperity, a soil of great productive capabilities.

The horticultural products of Michigan are even more interesting than those of agriculture. Since it was ascertained, some thirty years ago, that the climate of the state is peculiarly kind to almost all varieties of fruits, the development of horticultural interests has advanced with unprecedented rapidity. The explanation of this peculiarity of climate is to be found in the great inland seas that embrace the state. Sixty-five per cent. of the winds that prevail in winter are from the west and northwest. Lake Michigan, across which these winds are borne, is large enough to float the three states of New Jersey, Delaware and Maryland, and "deep enough almost anywhere," it has been said, "to bury Mount Holyoke beneath its surface." With its 3,400 cubic miles of water, held at a very even temperature throughout the year, it does for Michigan, in a small way, what the Atlantic does for Europe. The consequence is that peaches thrive on the parallel that bounds northern Vermont, and figs ripen in the open air on the line of central Massachusetts. And though this modifying influence of the lake is felt predominantly in the western part of the state, it is by no means without its effects even in the east. In 1882 a single fruit-grower, within forty miles of the eastern border of the state, is said to have sent to market between 5,000 and 6,000 bushels of peaches. At the meeting of the State Horticultural Society, held at South Haven in December, 1881, it was reported that the shipments from that port during the season just ended had amounted to 8,000 cases of berries, 33,000 baskets of grapes, 18,000 barrels of apples, and over 235,000 packages of peaches. The average yield of the peach crop per acre exceeded $125 in value. The most important of the horticultural products, however, is the apple. At the last meeting of the State Horticultural Society the entire sales of this fruit in the state were given as 4,834,936 bushels. In point of quality the apples of Michigan are unsurpassed, and large quantities are transported not only into the remoter states of the Union, but also to many of the countries of Europe.

Next to agriculture, the most important of the industries of the state is the manufacture of lumber. Within the past few years the figures of this great interest have outrun all previous computations. Exclusive of shingles, staves, lath and long timber, the product of 1881 amounted to 3,919,500,000 feet. Statistics show that two-thirds of the best lumber sold in the markets of New York, Philadelphia and Boston goes from Michigan mills, while vast quantities are distributed at intermediate points and throughout the prairie states. While the total value of all lumber produced in the United States is $233,367,634, the product of Michigan is $52,449,923.

At the present rate of production the pine will be exhausted, according to the estimates of the *Forestry Bulletin*, in about ten years. The same authority, however, computes the hemlock at 7,000,000,000 feet, and the standing hard wood at 700,000,000 cords. Within the past few years it has been found that the magnificent forests of hard wood are likely to become a great source of wealth. Manufactories of furniture and of woodenware of various kinds, have sprung up in different parts of the state, and so thriving have been these industries that there are not a few who predict that ultimately the product from hard woods will equal the enormous figures that now represent the earnings of the trade in pine.

Intimately connected with the manufacture of lumber is the manufacture of salt. In the earliest history of the territory it was known that indications of saline deposits were abundant. About the time of the organization of the state a series of appropriations were made to defray the expenses of a thorough examination of the saline resources thus indicated. It was found that there were indeed evidences of vast deposits; but no considerable effort was made to develop these resources before 1860. In that year a well was sunk to the depth of about 650 feet in the Saginaw valley, and the enterprise of the company making the experiment was immediately rewarded. The development of the industry was rapid and decisive. Two factors contributed to success. The brine was of the strongest and purest quality, and the process of evaporation was made inexpensive by the fact that the saw-mills furnished an abundant supply of refuse fuel and exhausted steam. Salt blocks have been erected until the saline products of the state have come to exceed by far those of New York. According to the census of 1880, the production of salt in the entire country amounted to 29,805,298 bushels, of which 12,425,885 bushels, or nearly one-half, was the product of Michigan. Since the compilation of that report deposits of great value and extent have been discovered in the western part of the state, and the salt blocks already in successful operation in that region promise the most gratifying results.

A comparative statement made by the Census Bureau in August, 1881, shows the statistics of the principal salt-producing states. The capital invested in the manufacture of salt in New York is represented as $2,286,081, in Michigan as $2,147,209. The value of the product is given in New York as $1,106,740, and in Michigan at $2,271,913. Thus while Michigan has $140,000 less capital invested the product of salt has more than twice the value. It is by reason of these facts that Michigan has come to command the salt markets of the country.

But even more important than the salt mills are the mines of iron and copper. It was in 1844 that the government surveyors, on the present site of the city of Negaunee, noticed that the variations of the needle were unusually capricious. The result of these observations was a more thorough examination of the region and the location of the property known as the "Jackson Mine." The first ore was taken out in 1846, and the first iron was made in 1848. The ore was found to be so rich and the quality of iron so good that the attention of iron-masters in Pennsylvania and Ohio was immediately drawn to this new source of supply.

As soon as the Sault Ste. Marie ship canal was opened, in 1855, the shipments of iron ore began. New enterprises followed in quick succession. The most careful explorations were made, and cities and villages sprang up in various directions. In 1881 the iron-producing mines were reported by the Marquette *Mining Journal* as fifty-six in number, and the product was 2,321,315 tons of ore. The special report of the Commissioner of Mineral Statistics on the product of 1882 gives the statistics of ore produced by each of the mines, amounting in the aggregate to 2,948,307 tons. The rapidity with which the iron industry has grown within the past five years will be seen from the figures given by the authority just quoted. The value of the product in 1878 was $6,884,432; in 1879, $11,413,114; in 1880, $19,457,427; in 1881, $20,498,613; in 1882, $26,270,205. The iron product of Michigan in 1879, according to the report of the National Census Bureau, already exceeded in value that of Pennsylvania.

Since that year, as the above figures show, the increase has been about 250 per cent. This rapid development has been owing in part, of course, to the general commercial prosperity of the country, but still more, perhaps, to the peculiar qualities of the Michigan ores. These are not only of extraordinary richness, the first class ores yielding an average of $62\frac{9}{10}$ per cent. of metal, but they are usually so free from phosphorus as to adapt them perfectly to the manufacture of Bessemer steel.

The rapid extension of railroads throughout the newer portions of the country and the general substitution of Bessemer steel in place of iron rails gave to the iron industry of Michigan all the stimulus that was needed. The consequent development has probably never been excelled in the history of mining enterprise. It is scarcely five years since the Menominee Iron Company began the development of its property; but in 1882, according to the Commissioner of Mineral Statistics, it had grown to be the largest ore-producing company in the world. In 1882 the Lake Superior mine produced 296,509 tons, the Republic 235,109, and the Chapin 247,506. These figures exceed those of any other three iron mines in the country, if not in the world.

The production of copper in Michigan began at a very early date. Within a few years after the formation of the state some of the fissures on Keweenaw Point were yielding a remunerative product. Explorations were rapidly pushed in various directions. It was ascertained that the mountain range, constituting the peninsula which extends northwest into Lake Superior, is made up of trappean rock, and that this rock contains the richest copper deposits ever discovered. For many years this richness itself was a source of embarrassment. Enormous masses, sometimes weighing hundreds of tons, of chemically pure copper were found, and the process of mining consisted simply of the tedious and expensive operation of cutting out with a chisel such masses as could readily be handled and melted. But about 1865 it was discovered that on the ridge of the peninsula, some twelve miles from Portage Lake, there was an enormous mass of conglomerate, containing small particles of copper in pure metallic form. This conglomerate seems to fill immense fissure veins of the trappean rock. It has not yet been so thoroughly explored that its extent can be even guessed with any confidence, but it has already come to yield enormous quantities and enormous profits. Not to trace the growth of the copper industry, it is, perhaps, enough to give the latest statistics. In 1882 the product of the mines was 57,259,137 pounds, and its market value was $10,541,408.10. This is more than five-sixths of all the copper produced in the United States. The quality of the metal is such that "Lake Superior copper" has come to be recognized as the standard of excellence in all parts of the world. But, notwithstanding what would appear to be the robust condition of the copper industry, the State Commissioner of Mining Statistics says that "it must still be regarded as in its infancy." "Not one-thousandth part of the trappean or copper range," he continues, "is known or has been minutely explored."

An inspection of the mineral statistics of Michigan gives some remarkable results. The aggregate value of the iron and copper raised from the mines of the upper peninsula in 1882 was no less than $34,800,000. The State Commissioner of Mineral Statistics in his report of March 1, 1883, estimates the profits earned by the iron and copper mines for 1882 at upward of $9,500,000. "This," he says, taking the *Mining Stock Register* as the basis of his calculations, "is considerably in excess of the whole amount reported to have been paid in dividends by all the gold and silver mines of the United States in 1882."

The coal fields of Michigan are estimated to cover about 8,000 square miles. The coal is bituminous and easily broken, but it is not sufficiently exposed in the formation to make explorations or mining easy or inexpensive. Moreover, in its natural state it is too bituminous for use in smelting, blacksmithing, or the production of illuminating gas. Beds have been opened at Jackson and Corunna, and have been worked with profit, but as the use of the coal has to be confined chiefly to the production of

heat, the demand for it has not extended very far beyond the vicinity of the mines. The claim has been put forward by some experts that the Michigan coal is of a quality to be cheaply manufactured into a pure coke. Should experiments justify these claims the fact will be of immeasurable advantage in the manufacture of iron.

The first settlers of Michigan came from the eastern states. Emigration moves chiefly along the parallels of latitude; and to this general law Michigan has been no exception. Of native Americans coming into the state about 8,000 have come from Connecticut, 11,000 from Massachusetts, 14,000 from Vermont, 28,000 from Pennsylvania, 62,000 from Ohio, and 232,000 from New York. The population born in America, according to the census of 1880, numbers 916,049, of whom 507,268 were born in Michigan. The same authority for 1870 gave the number of those born in foreign lands as 268,010. Of these 35,051 came from England, 42,013 from Ireland, 12,559 from Holland, 64,143 from Germany, and 89,590 from British America. In the decade from 1870 to 1880 the number of foreign born increased from 268,010 to 388,508, while during the same period the number of native Americans increased from 916,049 to 1,248,429. From these figures it will be observed that, although there is a very considerable foreign element, the predominating population of the state is strongly American.

It was the unspeakable good fortune of Michigan that in its early history the development and control of its institutions fell into the hands of unusually intelligent men. The first Superintendent of Public Instruction came to his task furnished with enlightened ideas gathered from a careful study of the best school systems in the old word and the new. It is worthy of note that Michigan was the first of the states to appoint a Superintendent of Public Instruction, and that Rev. John D. Pierce was the enlightened scholar who in America first occupied that position. His first report, given January 5, 1837, was a model of broad and comprehensive educational wisdom. It was a document of which any state, or, indeed, any country, might be proud, and to its recommendations, more than to any other one cause, is probably due the excellence of the Michigan school system. What might be called the most distinguishing characteristic of the report was the urgent recommendation that all grades of schools, from the highest to the lowest, should be under the fostering protection of the state. That policy was adopted. The consequence has been that, while the system of common schools is not essentially different from those in other states, the high schools justly rank among the best preparatory schools of the country, and the University has not only raised the quality of its instruction to a very high grade, but has come to be so ample in its appointments and so comprehensive in its courses of study that it now attracts students almost literally from all quarters of the globe. The University calendar for 1881–82 shows the organization of six departments and the presence of nearly 100 officers of instruction, as well as of 1,540 students. This army of searchers for such information as the University offers to give has been attracted from no less than 52 states and nations.

The Agricultural College was the pioneer institution of its kind in the United States. Situated in the vicinity of Lansing, it has grown to have a score of buildings and a beautiful and finely-improved farm of nearly 700 acres. Its endowment consists chiefly of the agricultural lands granted by Congress in 1862. Though less than half of the agricultural lands given to Michigan by this grant have been sold, the trust fund for the college already amounts to $307,652. In addition to the income thus afforded the state has made ample biennial appropriations, and the institution has quite generally come to be regarded as a model for similar colleges in other states.

The state Normal School at Ypsilanti affords good facilities for the preparation of teachers for service in the common schools.

If space would permit extended attention might be called to the generous provisions that have been made by Michigan for its institutions of charity. But our notice can scarcely go further than mere mention. The asylums for the insane at Kalamazoo and Pontiac are believed to be unexcelled in the excellence of their appointments and the skill of their management. The institution for educating the deaf and dumb at Pontiac aims to fit its unfortunate pupils for the battle of life by developing their general intelligence and teaching them some useful trade. The total value of its property is estimated at $436,000. A similar institution for the education of the blind is situated at Lansing. A reform school for boys, also located at Lansing, and a similar school for girls at Adrian, are designed for the care and reformation of wayward children. The state public school at Coldwater provides for taking dependent and neglected children into cottages erected for the purpose and giving them the advantages of domestic training. This institution, quite unique in its purpose and organization, has well been characterized as "one of the noblest and wisest charities of this or any country." It was recently referred to in the Institute of France as the "inauguration of a new era for indigent children." Like the other schools of the state it is supported by general taxation. The number of children in attendance is about 320.

The total debt of the state December 31, 1882, was $899,149.97, for the entire payment of which there are already in the treasury interest-bearing funds. Practically, therefore, the state is out of debt. The aggregate valuation of real and personal estate as equalized for 1881 is $810,000,000, and the total amount of taxes levied $1,021,091.23.

POINTS OF INTEREST FROM CALIFORNIA.

San Francisco, November 22.—There could not be a more favorable outlook for next season's crop than at present, and reports from every section of California note great activity in farm work, with the soil in good condition for handling. A much greater breadth will be planted this season than last, unless the usual winter rains should fail, which is not probable judging from the weather so far. The young grain is showing a healthy growth. Of course plowing and seeding is in active progress also, and it will be some considerable time to come before all the land can be said to be seeded.

Fruit orchards and vineyards form the special attractions at present, and a question has been raised whether grape growing has not been overdone. It is estimated that there are now at least 100,000 acres in grapevines in California, and owners of old vineyards are becoming alarmed at the coming competition. When Governor Stanford's vineyard in Sacramento valley has been completed he will have 10,000 acres under vines. There are several vineyards from one to two thousand acres, and those ranging between one and three hundred acres are very numerous. I do not apprehend any glut from increased production of grapes. There is now a far better market for grapes than when the production was small—better prices and a more certain sale. Increased production simply means an increase in the wine and brandy product of the state. And it is my judgment, whatever may be the ultimate position of wine making in California, that this state will ultimately excel the world in grape brandy.

The result of last year's vintage is now pretty accurately known. The unanimous judgment is that what it wants in quantity it more than gains in quality; but experienced wine-makers express the opinion that the shortage will not be quite so much as represented by me, namely, 3,000,000 gallons. Next year a great many new vineyards will come into bearing, Napa county alone anticipating double the quantity of this year's vintage. Many other counties will show almost as great an increase next season, necessitating a large addition to the fixed labor of the state.

The wheat trade this season presents the anomaly of a spot market for No. 1 shipping more than $2 per ton over current Liverpool quotations, with farmers holding back stocks for higher prices. Values are steadily rising for wheat, while freight is steadily declining. The warehouses are all full, and rent and charges having been paid farmers are in no hurry to sell. They could get $1.85 per cental very readily, but want $2. Millers pay $1.90 for prime milling very freely. At $1.85 per cental there is just $3 a ton left for freight to Liverpool at today's quotations, namely, 8s. 11d. to 9s. 2d., taking the short ton. The chartered grain fleet in port represents 67,000 tons register; disengaged, 108,750 tons; on the way, 205,400 tons. It is, therefore, a bad year for ships and a good year for farmers if they do not hold too long. Flour is dear and the market stiff.

Considerable progress is being made in founding new manufacturing industries in and around San Francisco. Labor is in demand at fair wages. In the leading country towns business never was healthier, 1883 being regarded as the best on the coast, taken all round. New enterprises of various kinds are being established, skilled labor is everywhere in demand, a better class of buildings is being erected, farm land sells freely at higher prices, and population from the east, with a slight sprinkling from Europe, is steadily settling up the state. This change is unquestionably the direct result of the check given to Chinese immigration; but our prosperity will be blighted unless Congress interposes obstacles to the systematic evasion of the law through the connivance or at least the partiality of the District Court for coolie immigration. Coolies are now arriving by hundreds, armed with Chinese certificates as "traders," etc., and these certificates are accepted as prima facie evidence in their favor, and they are allowed to land by order of the court. There never were more gross or flagrant evasions at once of a treaty and a law of Congress than those which take place regularly under judicial sanction in San Francisco. The judge said yesterday that further legislation is needed to prevent evasion of the law. The sooner a legal check is provided the better, or this commonwealth will be forced to provide one of its own. It is impossible to suppose that if the administration was prepared to do its duty in the premises the Chinese authorities would venture to insult this country as they are now doing.

The contract between the Northern and Central Pacific railroads, whereby the former receives $500,000 a year from the latter for withdrawing from competing for California traffic causes great dissatisfaction. San Francisco merchants are, therefore, shut up to the old special contracts or ruin. There is no alternative. This monopoly has crushed the public spirit out of the community, and, despite the material prosperity around, an atmosphere of stagnation envelops the city.

COMMERCIAL AFFAIRS IN CANADA.

Ottawa, November 27.—It is more than probable that some important changes will be made in the tariff next session. Tempted by the protection the present tariff offered, capitalists were led into investing heavily in manufactures; and already, in many lines, the evil effects of overproduction are being felt, notably in sugar refining and in the manufacture of cottons, The millers have also a grievance. To secure the farmers' rate the government placed a duty of fifteen cents per bushel on wheat, which virtually shut American wheat out of the Canadian market. This worked all right so long as the Canadian crops were good; but now that there is a short crop, insufficient to supply the local demand, the millers ask that the duty be removed or equalized with the duty on flour. They hold that it takes about four and two-thirds bushels of wheat to make one barrel of flour, the duty on which would be seventy cents. The duty on one barrel of flour is only fifty cents, which makes a difference of twenty cents in favor of importing flour, and gives the benefit of grinding to the American miller, rather than import the grain to grind in Canada.

While millers are asking for a modification of duty on grain a protest against it comes from the farmers, who state that when they had a surplus of grain, the duty was of no benefit to them, and now that they are likely to receive an advance in price, on account of the short crop, they hold it would be unjust to assist in admitting American wheat into competition with them by removing the duty.

The sugar monopoly is not the least to suffer from overproduction. Several delegations have waited on the government with a view to securing a drawback on all sugar refined in Canada for exportation. The four refineries in operation in Canada are producing far more than is required to supply local demand. The surplus cannot be thrown into competition in foreign markets unless a bounty or a drawback on raw material is allowed.

Regarding the cotton industry, several mills are working on half time, while in two or three instances a large reduction has been made in wages as well as in the number of operatives employed. In assisting the cotton manufacturers Parliament can do little, unless they come forward, as in the case of the sugar refiners, and ask a bounty on all manufactured cotton exported. They cannot ask a drawback, as there is no duty on the raw material used. The refiners have a good story, and to assist them out of their difficulty it is highly probable that there will be some legislation in their interests. The opposition of the farmers to a reduction in the duty on wheat will somewhat embarrass the government in complying with the demands of the millers.

The official statement of imports during October shows a slight falling off as compared with the corresponding month of 1882. During October of last year the total imports amounted to $10,609,999, against $9,996,508 during October of the present year, a decline of 5.7 per cent. Dutiable goods fell off 6.3 per cent. and free goods 4.5 per cent. Duty collected fell from $1,927,199 to $1,824,561, a decline of 5.3 per cent. While there was a falling off from $159,153 to $112,157, or 29.5 per cent., in the importation of grain, there was an increase of 48.7 per cent. in the value of flour imported. In the importation of coal there was an increase of 22.2 per cent. and in the manufactures of cotton a decline of 11.6 per cent.

The following shows the total value of exports from the Dominion during the month of October, 1882, and October, 1883:

	Produce of Canada.	*Produce of other countries.*	*Total.*
OCTOBER, 1882.			
Produce of the mine	$194,111	$17,293	$211,404
Produce of the fisheries	890,047	4,517	894,564
Produce of the forest	3,707,194	220,321	3,927,515
Animals and their produce	2,732,878	102,744	2,826,622
Agricultural products	3,511,399	1,077,594	4,588,993
Manufactures	335,732	93,163	398,895
Miscellaneous articles	67,657	10,998	78,655
Totals	$11,430,018	$1,496,630	$12,926,648
OCTOBER, 1883.			
Produce of the mine	$285,853	$22,200	$308,053
Produce of the fisheries	1,089,462	.....	1,089,462
Produce of the forest	3,749,626	283,685	4,033,311
Animals and their produce	3,174,729	124,394	3,299,693
Agricultural products	1,355,098	1,488,079	2,843,177
Manufactures	396,828	93,421	490,249
Miscellaneous articles	65,071	6,319	71,390
Totals	$10,116,667	$1,987,468	$12,104,135

It will be seen from the above that the export of native products fell off $1,313,351, or 11.4 per cent., while in the export of foreign produce there was an increase of $490,838, or 33.1 per cent. In the export of native mineral products there was an increase of $91,442, or 47.2 per cent.; in the products of the fisheries $199,415, or 22.4 per cent.; products of the forest $42,432, or 1.1 per cent.; animals and their products $450,850, or 16.5 per cent., and in manufactures $61,096, or 18.1 per cent. In the export of native agricultural products there was a drop of $2,156,301, or 61.4 per cent., and in miscellaneous exports $2,586, or 3.8 per cent.

The large falling off in native agricultural products is mainly due to the short grain crop. It will be noticed, however, that in the export of agricultural products not the produce of Canada there was a considerable increase. Comparing the bank statement for October last with that of the corresponding month of last year, it is shown that the circulation of notes fell from $37,940,516 to $33,145,845. This was largely due to the falling off in the demand for money required to move the crops. The most alarming feature of the last bank return is the large increase in overdue debts as compared with the October return of last year. The increase amounts to something over 33.6 per cent., which undoubtedly points to the inability of the banks' customers to meet their obligations at maturity.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

In a recent case in Kentucky the jury gave a verdict for a certain amount "to be credited by three barrels of corn at the prevailing price in 1877." The Superior Court held that this verdict should not have been received because it was for an indefinite amount. Whitney's administrator vs. Mulligan's administrator, decided November 19.

A judgment against an agent for a fraud committed while acting within the scope of his agency, on which no collection or payment has been made, is no bar to an action against the principal for the same fraud, according to the opinion of the Ohio Supreme Court Commission in the case of Maple vs. The Cincinnati, Hamilton & Dayton R. R. Co., decided on November 20. In such a case the fact that the principal was wholly ignorant of the fraud is immaterial.

A tenant in common who prevents his co-tenants from obtaining from the premises held in common their just shares of the income the premises are capable of yielding, or who takes possession of the whole and uses them as his own, and thereby makes a profit, is bound to account to his co-tenants either for the rental value of the premises or for the profits he has made, according to the opinion of the New Jersey Court of Chancery in the recent case of Edsall vs. Merrill.

The acceptance of a bill of exchange renders the acceptors primarily liable to the payee as makers and the drawers secondarily liable as indorsers. On non-payment the payee may sue either the drawers or the acceptors, or both, and the fact that he sues the acceptors for the use of the drawers does not vary his right to collect, nor is it necessary that he should indorse the bill before suit. Davis et al. vs. Baker, for use, etc., decided by the Supreme Court of Georgia on November 20.

Where matters in controversy between two parties were submitted, and the party in whose favor the award was made received money and notes from the opposite party in full settlement thereof, knowing at the time that there was a mistake in the calculation by which the full amount of interest due him had not been allowed, the Supreme Court of Georgia held that he could not retain the amount received

under the arbitration and also sue for the balance claimed to be due by reason of the mistake. Neel, receiver, vs. Field, decided November 20.

Where it has been the custom of a factor to insure consignments of produce, and where this custom has been brought to the knowledge of the consignor by uniform charges of insurance in accounts rendered, the factor will be deemed to have continued the custom until he has given notice of the change to the consignor, and will be held responsible for any loss consequent upon his failure to insure before such notice has reached the consignor. So held by the Supreme Court of Louisiana in the recently decided case of Area et al. vs. Milliken.

A surety who has satisfied the debt of the principal and obtained an assignment from the creditor, is entitled to all the rights of the creditor, according to the opinion of the Kentucky Court of Appeals, in the case of Dempsey vs. Rankin's administrator, decided November 15. The debt having been created prior to the execution of a voluntary conveyance by the debtor, the court held that the claim of the surety was, as to that conveyance, a pre-existing debt, although he did not become a surety until after the execution of the conveyance.

An agreement signed by creditors, in which each stipulates to take a part of his debt in satisfaction of the whole, in consideration that the other creditors will do the same, is binding upon all, according to the decision of the Kentucky Superior Court, in the case of Rosenthal vs. Jacobs, decided on the 19th ult. The court held, however, that where each creditor simply agrees to give up a part of his debt, if other creditors will agree to give up a part of their debts, there is no consideration for the agreement and it is not binding.

Evidence of a custom among the merchants of a city to deposit in bank drafts which they undertake to collect for customers abroad was held by the St. Louis Court of Appeals to have been properly excluded when offered to excuse due presentation. Dyas et al. vs. Hanson, decided November 20th. The Court held that such a custom, even if known to the persons forwarding the draft for collection, would not excuse a delay in presenting the draft, and that when one to whom a draft is forwarded for collection deposits the same in bank for that purpose, he becomes responsible for the diligence of the bank in presenting the same.

A horse was shipped by rail, under a bill of lading signed by the agent of the shipper and which contained among other things the provision, "value not to exceed $100." The horse was injured through the carrier's negligence. In an action by the shipper for damages the Supreme Court of Kansas held that his recovery was not limited by the provision referred to above; that while a common carrier may relieve himself by a special contract from the strict liability imposed upon him by the common law, he cannot contract for exemption from the consequences of his own or his agent's negligence. The Kansas City, St. Joseph & Council Bluffs Railroad Company vs. Simpson, decided recently.

The facts in a case recently decided by the Kentucky Court of Appeals were as follows: Several persons purchased jointly with a private warehouseman certain specified lots of whisky, which were deposited in his warehouse, and placed to the account of the particular adventure. The purchase was made solely for the purpose of selling the whisky and dividing the profits, if any. The warehouseman sold the greater part of the whiskey, receiving largely more than his share of the proceeds, and pledged what remained for his individual debt. The Court of Appeals held, in Cochran et al. vs. the Anderson County National Bank that the warehouseman had no authority to sell the whisky and that the joint owners had a superior right to that of the pledgee.

In the case of Becker vs. Mason, recently decided by the Kansas Supreme Court, it appeared that the plaintiff and the defendant entered into a contract whereby the plaintiff was to convey or to cause to be conveyed to the defendant certain real property belonging to the former's wife, the defendant agreeing in consideration thereof to transfer certain bank stock to the plaintiff. No note or memorandum of the contract was reduced to writing or signed by either party. The Supreme Court held that the contract was within the statute of frauds and could not be enforced in an action brought by the plaintiff against the defendant for the recovery of damages because of the latter's refusal to transfer or deliver the bank stock.

A bill of exchange was drawn upon the defendant at twenty-five days after date, and he accepted the same for the accommodation of the drawer. The latter indorsed the draft to plaintiff, who knew that the defendant was an accommodation acceptor. At the maturity of the draft the drawer was solvent, but the draft was not presented until fifty days after maturity, and in the meantime the drawer had failed, owing the acceptor a considerable sum. The St. Louis Court of Appeals held in the case of Beveridge et al. vs. Richmond, decided on the 20th ult., that the plaintiff was entitled to recover from the defendant, the acceptor, and that the fact that the payee knew when he took the paper that the draft was accepted for the accommodation of the drawer, was immaterial. The court said that, in the absence of a special understanding with the holder, a party to negotiable paper is liable in the character which he assumes upon the paper; that the undertaking of an acceptor is not collateral but original, and that he becomes the original debtor of the payee, who cannot resort to the drawer except on failure of due payment by the acceptor.

In the case of the Hatton vs. The Baltimore & Ohio Railroad Company, decided recently by the Ohio Supreme Court, it appeared that the plaintiff purchased from the defendant company a ticket from Newark to Junction City; that after leaving Newark and before reaching Somerset, an intermediate station, the plaintiff surrendered his ticket to the conductor and demanded a stop-over check for Somerset. Upon the conductor's refusal to give him the check he voluntarily left the train at Somerset. Some hours later, on the same day, the same train in charge of the same conductor stopped at Somerset on its way to Junction City. The plaintiff boarded the train at the former place and demanded to be carried to Junction City on the ticket which he had surrendered in the morning and refused to pay fare to the latter place. On his refusal he was ejected from the train. In an action brought by the plaintiff for damages for such ejection, the Supreme Court held that in the absence of any agreement or of a rule or regulation to the contrary the obligation created by the sale of the ticket was for one continuous passage, and that when the passenger voluntarily left the train at an intermediate station while the carrier was engaged in the performance of its contract, he thereby released it from further performance and had no right to demand such performance on another train, or at another time.

BUSINESS NOTES.

London *Nature* announces that there will be "an universal exhibition on a tolerably large scale" held at Nice, beginning December 1 next. It is proposed to continue it the whole winter. The Algerian *Akhbar* suggests that in 1885 a Pan-Mediterranean exhibition should be opened in Algiers, and in 1887 a Pan-African one.

The coal shipments from the Kanawha valley during the year ending June 30, 1881, as reported by the Wheeling *Intelligencer*, were, by rail, 6,631,660 bushels; by river, 9,628,696, a total of 16,260,356 bushels, against 13,200,255 bushels by rail and 15,370,458 bushels by river, a total of 28,670,713 bushels for year ending May 21 last.

The total number of failures in the United Kingdom during the week ending December 9, as reported to *Kemp's Mercantile Gazette*, was 170, against 226 and 256 respectively during the corresponding weeks in 1882 and 1881. England and Wales reported 152 against 208 and 235 in the like weeks of 1882 and 1881; Scotland had 15 against 12 and 19, and Ireland 3 against 6 and 2.

In their circular of November 21, a Denver firm of metal brokers state that lead sales in New York for the week were 2,500 tons at no gain in prices About 800 tons have been sold at St. Louis from $3.65 to $3.50, and the same can be said at Chicago—35c.@50c. under New York rates. Heavy sales from refiners have been the main cause of the decline. Lead is reported steady by *Money* (London), prices being quoted at £12 5s. to £12 10s.

The entire length of the great cantilever bridge over Niagara river, which has just been completed, is 910 feet 4⅝ inches, the distance between the towers being 470 feet. It is 239 feet high from the water to base of rail. Most of the material is steel; double refined wrought iron is also used, cast iron being used only on the pedestals on the masonry, and in filling rings. All the materials employed were first carefully inspected at the mills. All the masonry is of Queenstown limestone. The Niagara cantilever is designed for a double-track railroad bridge, able to carry at one time two freight trains of the heaviest kind. When so burdened it is said the bridge will be tested only one-fifth of its full strength.

The St. Paul *Pioneer Press* says the quantity of lumber cut by Minneapolis mills this season has been considerably behind that of the previous year. There was an understanding among local manufacturers to cut only about 250,000,000 feet, and in this they were abetted by the fewer logs brought down. During the season of 1883, 280,195,271 feet of lumber, 85,991,800 feet of shingles; 61,629,460 feet of laths were cut, against 314,362,166 feet of lumber, 138,546,000 feet of shingles and 61,331,380 feet of lath for 1882.

The October shipments of iron and steel from the United Kingdom to the United States, as compared with those in September, 1883, and in October, 1882, were as follows:

	Oct., 1883.	*Oct.*, 1882.	*Sept.*, 1883.
Hardware and cutlery, £	39,285	42,452	30,479
Iron—			
Pig, tons	26,748	38,148	20,819
Bar, angle, rod, etc., tons	260	1,933	1,101
Railroad, all, tons	5,919	23,870	6,821
Hoops, sheets, plates, etc., tons	2,859	3,140	1,859
Tinplates, tons	21,317	18,566	21,200
Cast or wrought, tons	380	257	362
Old, tons	2,236	5,557	2,016
Steel, unwrought, tons	907	4,312	280
Lead, all sorts, tons	10	.....	56
Steam engines, £	3,271	2,652	4,159
Other machinery, etc., £	30,049	64,207	23,216
Tin, unwrought, cwt	708	1,222	341
Special return—			
Iron rails, tons	24	211	50
Steel rails, tons	5,575	23,431	6,508

In speaking of the new Gem iron furnace of the Shenandoah Iron Company, at Milnes, Page Co., Va., which went into blast for the first time February 1, 1883, The *Virginias* (Staunton, Va.) for November says it has a good authority for stating that during the first six months of this blast, notwithstanding the losses of time and the delays incident to a first blast, including in this instance three weeks during which the furnace was banked up, the cost of pig iron made, delivered on the cars, was $12.98 per ton; and the sales of the product of this period averaged $16.60 per ton at the furnace, leaving a clear profit of $3.62 per ton. About 54.5 tons of iron was made daily last April. A Whitwell stove is to be added shortly to the plant of this furnace.

The following national banks have been organized: The Factory Point (Vt.) National Bank; capital $50,000; Robert Ames president. The Beatrice (Neb.) National Bank; capital $50,000; Erastus E. Brown president; C. N. Brown cashier. The National Bank of Sumter, S. C.; capital $50,000; R. M. Wallace president; Charles E. Bartlett cashier. The First National Bank of Syracuse, Neb.; capital $50,000; Nicholas A. Duff president; Charles E. Cotton cashier. The Corn Exchange National Bank of Chicago has gone into voluntary liquidation. The following changes are reported: W. E. Weber, president of the Third National Bank of Cumberland, Md., in place of J. M. Schley; Harvey Satterwhite, president of the First National Bank of Martinsville, Ind., in place of T. H. Parks; H. W. Yates, president of the Nebraska Bank of Omaha, in place of S. R. Johnson.

The London *Labour News* of November 14 reports the English labor market still unsettled. The colliery mines were agitating wages questions. In Yorkshire several thousand miners threatened to stop work on December 5 if the wages were not advanced 15 per cent. The miners in North Wales also refused to work after December 1 without an advance of 15 per cent. About 9,000 miners were engaged in this. Work was fairly plentiful in the manufactured iron districts. Building and railway construction is very brisk. Work was somewhat slack in the boot and shoe trades. In the textile industries there was increased activity in the manufacture of heavy goods. The Kidderminster carpet sales were very brisk, and the royal axminster carpet trade was increasing. Work was plentiful at Leeds, Halifax, Huddersfield and Bradford. The Lancashire weavers have accepted a compromise of 5 per cent. reduction. The riverside laborers were in excess of demand. Emigration was good.

The feature in the returns to the British Board of Trade for October was a large increase in the value of food products imported, and a falling off in the imports of cotton. In exports those of railroad iron continue to fall off. The total value of imports was £35,833,775, against £34,152.015 in October, 1882, and £31,307,313 during October, 1881. The total value of imports for ten months of the year was £355,128,514, against £341,529,992 in the corresponding time in 1882, and £328,011,306 in 1881. The value of exports was £21,138,859, against £20,877,713 during October, 1882, and 21,241,081 during October, 1881. The total value of exports for the ten months ending October 31 was £200,803,944, against £203,012,657 in the corresponding time in 1882, and £193,060,793 in 1881. The total imports of gold during the ten months ending October was £6,961,169 against exports of £5,586,370. The tonnage of foreign trade for October was 4,965,046 tons against 4,728,638 tons in October, 1881. The excesses of values of imports in October, 1881, 1882, and in 1883 and the total value of British foreign commerce in those months were:

Excess imports	134,950,513	138,517,335	154,324,570
Total trade	521,072,099	544,542,049	555,932,458

The advance sheets of the forthcoming report of the Cincinnati Chamber of Commerce show the consumption of ale, beer, etc., in Cincinnati, for the year 1882–83 ending August 31, to have been greater than in any preceding year. The quantity of malt liquor brewed in Cincinnati, in that year, was 813,999 barrels, against 769,621 in 1881–82, 682,861 in 1880–81, 655,520 in 1879–80, 558,709 in 1878–79, 550,518 in 1877–78. The production in Covington and Newport in 1882–83 was 60,860, against 57,660 in 1881–82, 53,480 in 1880–81, 52,800 in 1879–80, 47,440 in 1878–79, 44,470 in 1877–78. The receipts for the past year were 17,536 barrels. There were 286,665 barrels shipped, and about 20,000 barrels of bottled. It is thought the stocks were larger than at the same time last year. In the making of malt liquors at Cincinnati and vicinity in the year named there were consumed 1,843,787 bushels of malt and 1,401,425 pounds of hops. Owing to the introduction of refrigerating processes the consumption of ice has been less. The price of ice had been $2.00@$4.00 per ton, against $5.00@$7.00 per ton the preceding year. The average price of beer had been $8.00 per barrel. There has been a large increase in the demand for bottled beer. Cincinnati has found customers in Mexico, West Indies, and in South and Central America.

The foreign trade returns from Germany for nine months of the current year furnish the following details: The import of raw cotton in that period amounted to 1,446,999 double cwt., against 1,198,070 double cwt. during the same period of 1883. The import of twist was 158,443 double cwt., against 136,048 double cwt.; of thick unbleached cotton texture but little was imported, and 81,752 double cwt., against 86,913 double cwt., were exported. The export of cotton hosiery was 47,004 double cwt., against 45,050 double cwt., the import having amounted to no more than 321 double cwt., against 315 double cwt. The import of pig iron amounted to 1,953,640 double cwt., against 1,978,860 double cwt.; the export to 1,882,103 double cwt., against 1,408,908 double cwt. Wrought iron, in rods, was imported to the amount of 108,355 double cwt., against 111,392 double cwt.; whilst the export amounted to 1,118,292 double cwt., against 1,080,543 double cwt. The import of rails was 11,159 double cwt., against 3,790 double cwt.; the export 1,350,255 double cwt., against 1,276,985 double cwt. Iron wire was imported to the amount of 26,875 double cwt., against 25,089 double cwt.; exported to the amount of 1,569,859 double cwt., against 1,673,344 double cwt. In all the different branches of iron, the export is about ten times what the import amounts to. In the case of machines, also, the exports exceed the imports. Thus, 2,195 double cwt. of engines against 1,103 double cwt. were imported, and 97,142 double cwt. against 91,761 double cwt. were exported. The import of machines of all kinds amounted to 231,113 double cwt., against 210,451 double cwt.; the export to 572,692 double cwt., against 529,121 double cwt. Only in the case of locomotives do the imports considerably exceed the exports, in the greater part being imported from England. The amount imported was 21,431 double cwt., against 15,109 double cwt.; the amount exported only 4,515 double cwt., against 4,073 double cwt.

SAVINGS BANKS IN RUSSIA.

The London *Economist* of recent date has the following: "Savings banks have been in existence in Russia for upward of forty years, but until recently the people seem to have been but little disposed to make use of them. During the past two or three years, however, they have been coming into greater favor, mainly as the result of new regulations, which came into force in 1881, and which provided, among other things, for a considerable increase in the number of the banks and an increase from 3 to 4 per cent. in the rate of interest paid to depositors. A comparison of the returns, dated respectively the 1st of January, 1881, and the 1st of August, 1883, shows the following results:

	August 1, 1883.	*January* 1, 1881.	*Inc.*
Number of accounts—			
State savings banks	132,582	100,262	32,320
Municipal savings banks	4,925	3,810	1,114
Amount of deposits—			
State savings banks	£1,054,000	£734,000	£320,000
Municipal savings banks	30,000	20,000	16,000

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

The investment market, which is the bond market, has shown some life recently, and many people have founded upon this a hope, and arguments to support it, that this is the sign of the return of the public to Wall street. In leaving it the public abandons the bond market first, and while towards the close of a period of great speculative activity the stock market is still in full swing, railroad promoters and others discover to their dismay that each day sees a lessening number of buyers in the bond market, and it is not long before they find their new issues lying unsalable on their hands. After this the stock market begins to feel the decay of business. In the period of revival after the era of depression has run out it is again the bond market which gives the first signs of the return of the investing classes; after whom come the speculative. There would be reason to believe that the present animation of the bond market really indicated the revival of business in Wall street, if even a casual survey of the general condition of trade and industry, not only here but the world over, did not show such a belief to be illusory. It is simply impossible that Wall street can revive before the rest of the country; it never did it and it never will, because the conditions of business forbid it. The demand for bonds at this time, though active, is limited, and the same thing has been seen before since the great speculative and industrial reaction began in the summer of 1881. It is produced by the government calling in its bonds and thereby setting free some quite heavy amounts of money which seek investment in other first-class securities, and by the yearly and half-yearly payments of interests and dividend moneys. It requires but a short time for these funds to be reinvested, and when they have been the temporary activity of the bond market ceases. If there were sure signs of an improvement in the general commercial situation, the demand for bonds now might be accepted with certainty as the sign of an improvement in the financial situation; without this we may hope, but it is difficult to believe.

No one who does business in Wall street but would like to believe that immediate improvement was coming, for with affairs as they are there seems to be no money for any one. It is next to impossible to make anything on this market, whichever way one tries to trade. If you try it on the short side, you find that prices are down to a level where it is hard to move them lower, because the large operators, banks and trust companies, with whom the stocks have accumulated, seem willing to support them at the present figures, believing that they can hold on there until signs of better times appear on the horizon and a bull market becomes again a possibility. If you try on the long side, you discover that prices cannot be moved up because there are no buyers in sight, and the people who have the stocks are so loaded that they are disinclined to risk making an upward movement for fear of accumulating more stocks. Here and there, of course, there is a movement in some special stock; but the general market remains in the condition spoken of. The little fluctuations of the day or hour, which require a man to hang over the tape all the time to catch them or avoid being caught, are of small account, and are not referred to here. They will continue, if it were only from the buying and selling of no one but the room traders. How will this end? is naturally asked. To which it may be answered that no one can tell, simply because it is humanly impossible to know all the factors which enter into the problem. Wall street is, in a sense, the mirror of the commercial world, and what happens in that is reflected in it.

Additional causes of dullness this week were the holidays, the uncertainty about the disputes among the roads in the Iowa pool, and the near approach of the time for the meeting of Congress. The warring railroad managers met on Wednesday, wrangled all day and late into the evening, and finally adjourned till December 13 without coming to a settlement. The adjournment seems to leave the matter hanging in the air, and it will probably be from the course of the stocks in the market of the several roads involved that outsiders will learn whether the postponement means peace or further preparations for war. The action of the St. Paul Company in extending the time of its notice of withdrawal from the pool until January 1, looks like peace, and the tenor of the dispatches is that way. At the same time the intense bitterness of feeling between the managers of that road and those of the Rock Island appears very prominently in such meager reports of the discussions as have been given to the press, and it may be that, whether the other roads like it or not, these two companies will try conclusions before they agree to a treaty of peace. Congress meets on Monday, and Congress is a greater disturber of Wall street, because it is always uncertain what it will do, and uncertainty paralyzes the business of stock speculation. It seems to be regarded as certain that the session will be distinguished by some radical work in the way of tax reduction, possibly further tariff reform and agitation for extending government control of the railroads. It is quite likely that there will be considerable fighting over measures specially affecting the land-grant roads. The proposal to take the tax off bank circulation is expected to open the way to a thorough discussion of the whole national bank system. Wall street is beginning to get slightly alarmed at the rapid reduction of the national debt, because the continuous calling in of the 3 per cent. bonds causes the banks to contract their circulation, and a forced contraction of the currency is not a particularly pleasing thing for the street to contemplate. It is a terrible disarranger of prices. The estimates made in the summer by the treasury officials of the government receipts and expenditures for the remainder of the year have proved to be erroneous, hence the constantly growing surplus which forces the treasury to call in and redeem bonds.

The Canadian stocks—Manitoba and Canadian Pacific—have attracted considerable attention this week on account of their weakness. It is not hard to discover the cause. The state of affairs in Canada, as revealed in the dispatches from Montreal, tells the story. A big commercial and financial convulsion—big for Canada, that is—seems imminent there. It will not be forgotten that in the article of November 3d, when attention was first directed to the Canadian Pacific stock, it was said that a guarantee from the Canadian government at this time was not a thing for investors to pin much faith on, for "things seem shaping for an explosion up north." It looks now as if the explosion would come even sooner than was expected. It may even happen that these troubles will result in the downfall of Sir John Macdonald's administration, despite his big majority; for with matters as they are now, and they will certainly be worse before the Canadian Parliament meets, the popular feeling may be such that the opposition will be able to carry a motion for a committee of inquiry into this stock guarantee business. If such an inquiry be made thorough, and all the facts brought to light, it is difficult to see how such another violent upturn as once before drove this same party from power can be averted. It was the exposure of disreputable transactions in connection with this same railroad scheme which caused that, and unless appearances are wonderfully deceptive there is abundant material for another of the same sort.

The statement of the business of all the lines of the Pennsylvania Railroad Company east of Pittsburgh and Erie for October, 1883, as compared with the same month in 1882, shows an increase in gross earnings of $215,292; an increase of expenses of $36,856, and an increase in net earnings of $178,438. The ten months of 1883, as compared with the same period in 1882, show an increase in gross earnings of $2,330,423; an increase in expenses of $1,569,939, and an increase in net earnings of $650,484. All lines west of Pittsburgh and Erie, for the ten months of 1883, show a surplus over all liabilities of $1,168,503, being a decrease as compared with the same period of 1882 of $412,478.

Money continues abundant as ever on call for all who have good collaterals; but it is hard work to get a dollar on any but good ones. The rate runs at 2 to 2½ per cent., with but little demand. The renewed activity and rise of prices in the grain and provisions markets may make some demand. Exchange rates continue up, the posted rates being $4.83 and $4.85½—the same as they were at the close of last week. Government bonds rule firmly at the advanced quotations. The following were the closing prices yesterday:

	Nov. 23, bid.	Nov. 30, bid.	Nov. 30, asked.
U. S. 4½s 1891, registered	113¾	114	114½
U. S. coupon	114⅞	113	115⅛
U. S. 4s 1907, registered	122½	122⅞	123
U. S. 4s 1907, coupon	122½	122⅞	123

The bank statement of Saturday was somewhat confusing in its details, the system of averages on which it is made up producing occasionally apparent discrepancies in the items quite surprising. The surplus reserve was represented to be increased $1,610,925, bringing it up to $5,283,900. The following are the comparative totals of the statements of November 17 and November 24:

	Nov. 17.	Nov. 24.	Differences.	
Loans	$323,620,300	$324,638,700	Inc.	$1,018,400
Specie	55,926,500	56,865,800	Inc.	939,300

COMMERCIAL.

SUMMARY.

The general movement of merchandise during the week, as reported in special dispatches to BRADSTREET'S, has been more moderate than for some time past. The holiday character of the week has curtailed the volume of transactions. The approach of Christmas and New Year's, while stimulating certain departments in retail lines, in no way helps wholesale dealers or jobbers, except for reassortment lots from holders of specialties, which are salable more particularly at this season. The dry goods movement is generally duller, and sales are quiet. At a few western points only are sales reported to be of moderately satisfactory proportions, although the present season is generally classed as a dull time. In industrial lines there has been more restriction of production. There is no improvement in the situation of iron. Prices at seaboard, for cash, for pig are in reality 50c. cheaper for Nos. 1 and 2 X than the figures generally quoted, and grey forge is also to be obtained for less money than named on current price lists. The steel-rail price scare from Cleveland amounts to nothing. It was based on reported sales of rails at Chicago at $35, which, by inference, was equivalent to $33.50 at Pittsburgh. But this is, in fact, far different from the latter figure at Pittsburgh, and the Lackawanna Company's president is authority for the untruth of the report that his people had sold at less than $35. Wheat prices in the week are up about 1½c., failing to sustain the promise of the incipient boom of a few days ago. Corn has shown more strength and has gained ½c. in price and upwards, in closer sympathy with provisions, which have enjoyed a genuine boom. The gazetting of the order in Paris rescinding the prohibition of the importation of American pork, while not promising immediate heavy additions to the export demand, warrants some gain in price, which is perhaps being more than discounted. Lard has gained ½c. per pound and pork $2.00 per barrel in the week. Petroleum is steady. The situation continues to favor higher prices, which, of course, may or may not be permitted to go into force. The loss to stocks of crude in tank during November will average about 4,000 barrels daily, which will make about 700,000 barrels loss since August 1. Ocean freights are firm but dull. Cotton and petroleum are in best demand. Coal is duller and cheaper to heavy customers, and a restricted output during December is expected. Consumers of wool have been buying only for near wants, but the confidence of holders is unshaken owing to the prevailing small supplies. There are 232 failures in the United States reported to BRADSTREET'S during the past week, 4 more than the preceding week, 46 more than the same week of 1882 and 74 more than the same week of 1881.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: General trade has been fair.

From Boston, Mass.: There has been a lull in all departments of trade owing to the observance of Thanksgiving, and the situation presents no features worthy of special comment. The holiday trade promises to be quite brisk from this time until the close of the year, but the indications are that business in other departments will continue to pursue its conservative course. The money market is quiet and steady, with bank discounts at 5@6 per cent.

From Philadelphia, Pa.: Retail trade in many lines is showing increased activity in consequence of the near approach of the holidays, but aside from a larger movement in Christmas specialties there is a tendency to greater quietude in all departments of wholesale trade. This is the usual feature of business at the beginning of December. Merchants are getting affairs in shape for stock inventories and annual settlements, and the disposition to contract rather than increase obligations will be likely to grow as the month advances. The outlook, therefore, is for quiet movements in all lines until after the turn of the year.

From Cleveland, Ohio: The demand for dry goods continues without any visible falling off, but the notion trade has virtually closed for the season. The holiday trade is beginning, and jobbers in clothing and fancy goods anticipate a good many small orders for filling in. The retail trade is, of course, now at its best, and dealers claim to be selling a fine class of goods. Money is in good demand at 7@8 per cent.

From Evansville, Ind.: Business is fairly active in most lines, though the lumber men complain of dull trade; also the clothiers. Collections are reported fair. Money is easy, with an average demand.

From Detroit, Mich.: General trade has been fairly active and collections have averaged well, but there is an apparent tendency to restrict credits for the next sixty to ninety days. Country merchants are generally well stocked, and indications point to dull trade on account of the depression in lumber and iron, the shortage of some crops and an expectation of an open winter.

From Chicago, Ill.: Money is very firm at 6 per cent. on call and 7 per cent. on time. Demand is above supply. Exchange is 60@75 discount. Collections in most classes of trade are slow.

From Peoria, Ill.: There are no new features in general trade, though the weather is more seasonable.

From St. Louis, Mo.: Excepting in fancy goods and holiday specialties general trade is rather quiet. Collections are fairly easy from all directions. The weather is pleasant, but too warm for curing corn fast. Money is more active in view of the monthly settlement and the rate is firm at 8 per cent. New York exchange is 50c. premium and prime commercial bills par.

From Kansas City, Mo.: General trade is moderately active. The warm weather is affecting sales of seasonable goods. Collections are good. Money is steady and firm at previous rates.

From Grand Rapids, Mich.: General trade is quiet. Collections are only fair.

From Milwaukee, Wis.: Business is brisk, stimulated by the colder weather. Money is in demand at 7 to 8 per cent. Currency shipments to the interior are large.

From St. Paul, Minn.: General jobbing is only fair and steady. Country buyers are merely sorting up while waiting for positive weather. The market generally is sensitive to the weather. Collections are improved. City borrowers are less urgent and currency has been coming in better during the last four days. Shipments are moderate, but the whole movement is less than usual this season. Large quantities are still in the wheat sections but not circulating, as the country wheat movements are lessening. Eastern exchange is held firmly at a premium between banks. The retail trade is dull for the season, showing a decrease from last year. Holiday sales are moderate, thus disappointing former expectations.

From Minneapolis, Minn.: Jobbers report a good order trade and a large fall business in all lines of the jobbing trade. A good business is reported, with good collection from country dealers. The money market is a little easier. Receipts from the country are increasing, and with the diminished movement of wheat the demand is not so great, but is still fully equal to the supply. Eastern exchange steady at par.

From Lawrence, Kan.: The condition of trade remains unchanged—good in all lines. Money is easy and collections are promptly met.

From San Francisco, Cal.: But little change is noticeable in general business during the past week except the growing demand for holiday goods. In most lines stocks are heavy. Exchange on New York 10c. premium.

From Baltimore, Md.: There is no improvement in the general business situation. In some departments a little more activity is noticed, but this is only where preparations are making for the holiday trade. The volume of business is light.

From Norfolk, Va.: All departments of trade complain of dullness. Collections moderate, and the weather is fine. Preparations for the holidays are in active operation.

From Savannah, Ga.: Trade is variable and fluctuating. Thanksgiving made a gap in sales and lessened the volume, except in produce, which has enjoyed more demand. Dry weather continues, and the crops are suffering and parched up. Farmers are discouraged by the drouth, which has been of long duration.

From New Orleans, La.: The feeling in regard to crops and prices has changed but little. Money is in good demand. Call loans are 7 to 8 per cent. Securities are dull. Holders of Louisiana 7s are awaiting the action of nominating conventions in December.

From Memphis, Tenn.: Trade in general is active, and especially in breadstuffs and plantation supplies. Money 8 per cent. Exchange at par.

From Nashville, Tenn.: General trade is quiet this week.

INDUSTRIAL.

Forced reductions have been made in the number of employés in rolling mills, blast furnaces, machine shops and foundries, both skilled and unskilled. One hundred men were discharged at a Scranton steel rail mill. A 10 per cent. reduction goes into effect at the Trenton Steel Works December 10. A plate mill at Harrisburg has shut down. The strikes in the ore and coal fields are practically adjusted. The efforts of agitators to organize Pennsylvania and Ohio miners has met with but little success. Clearfield, Pa., coal operators are endeavoring to restrict the output and advance prices. The Fourth Pool miners on the Monongahela river refused to arbitrate without the coöperation of the lower pools, but elected an umpire and adjourned to meet Tuesday, when arbitration will be again considered. The window-glass strike presents no new features. Paper manufacturers report a slight improvement in trade prospects resulting from the partial restriction in output. The demand for machinery, engines and motive power is fair. Work is being pushed at nearly all the ship and boat yards along the lakes, but less is being done at some locomotive works. Two hundred hands were discharged last Saturday from the Rogers Locomotive Works at Paterson. A large iron works at Camden and a large print works at Gloucester, both in New Jersey, will be in operation within a few days. The New York carpet weavers and cigar-box makers are still striking. Boston capitalists propose to subscribe $1,000,000 to erect a large cotton mill somewhere in Virginia.

INDUSTRIAL FEATURES

[By Telegraph to BRADSTREET'S.]

From New Orleans, La.: Freight-handlers' strike seriously interrupting business movement.

From Wilmington, N. C.: Cotton press, rice and grain mills are running on full and lumber mills and turpentine distilleries on short time.

BREADSTUFFS ABROAD.

English wheat markets during the week have ruled slow. There has been no opportunity for them to brighten, and none is reported in sight. Trade is, therefore, dull and lifeless. Flour values have been tending downward. Stocks of foreign in English ports and storehouses are as large as ever, and buyers are cautious. A Calcutta telegram of November 7 says that supplies of wheat in India are small. Rain was needed in Bengal. The demand for Indian was better, and prices were tending to advance. Better prices prevailed in France, where the millers are seeking for more liberal supplies. Wet weather in Germany has unsettled trading. Wheat has been steadier, and at various markets has advanced slightly. In Holland wheat has gone off a little. Russia is quiet. From northern ports exports are declining. In the south no attention is being paid to it. Word comes from Australia (Melbourne and Adelaide advices) that the harvest prospects look better than at any time since 1870, and that without serious drawbacks the crop there will be very large. An English view of the heavy stocks of wheat and flour in the United Kingdom and their bearing on prices is given as follows: "Admitting that there are, no doubt, many holders who will not part with their stocks at the present range of prices, it is equally certain that there are a number of others who only want to realize, and that the quantities which they are capable of offering may at any time be beyond the immediate wants of consumers. The large stock of flour is, furthermore, a great present impediment to the free sale of wheat. On the other hand, it will be well for the trade if any existing speculation is now from time to time turned to investments in wheat on the spot, thus causing steadiness, instead of going into speculations from abroad, which are seldom feasible on equally advantageous terms, and only attract larger supplies, which are calculated to spoil the market. Latterly this course has been followed with advantage, and is the cause of so unusually few purchases having been made in America, where prices are still too high to offer any safe encouragement."

The cheapness of Russian wheat and its consequent influx into the English market and the present dullness in that grain at northern and southern ports in Russia find some explanation in the following extract from the special St. Petersburgh correspondence of the London *Ironmonger:* "The general scarcity of money has, of course, a great influence upon the iron trade; credit also is bad. The banks are not so ready to make advances as formerly, when they see such large stocks already mortgaged, and when the large quantities of grain stored at our various outports do not find foreign buyers. If grain prices do not go up in England there will be hard times for many of our dealers here, who anxiously scan each day the telegrams from Europe and America, wishing grain to rise."

AMERICAN WHEAT MARKETS.

Despite the holiday character of the past week, with intermissions in trading on Monday and again on Thursday, the middle of the week witnessed a genuine boom of moderate dimensions. The New York market naturally sympathized with this state of affairs, but failed to go as far as did prices at Chicago, where the advance began and reached its highest point. On the one hand the rise in prices was attributed to sympathy with that of corn, which in turn had been inflated by the prevalence of short crop news and by cables indicating probability of an early removal of the French embargo on American pork, which has already had the affect of advancing the prices of hog product in domestic markets. Again there were explanations which based the advance on an outburst of buying at the west due solely to a change of public opinion from the bear to the bull side. This was the only visible cause for change at New York. Heavy purchases stimulated prices and the gain for the day (Tuesday) was from 1c. to 1⅞c. per bushel. Saturday's trading had been dull and featureless. Wheat fell off about 1c. per bushel on Wednesday, owing to free offerings. There was a loss on options on Friday, though spot wheat continued steady.

The quantity of wheat in store in New York and vicinity November 24, was 8,112,316 against 8,141,319 on the preceding Saturday, and over 2,000,000 in excess of the amount in store here on November 25, 1882. In commenting on the trading in wheat options in the United States, a London observer says: "New York seems to find the situation hopeful enough to buy and sell weekly—on paper—about ten times the quantity that export demand could deal with in actual bulk. There is no parallel to such dealing in Paris, Berlin, Antwerp, or London."

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended November 24 amounted to 2,147,323 bushels, against 1,842,816 bushels in the preceding week, and the shipments to 882,259 bushels, against 930,143 bushels in the week previous.

The receipts of wheat at the seaboard ports for the week ended November 24, 1883, amounted to 957,394 and in the previous week to 1,305,814 bushel. The exports from the eastern seaboard ports during the week ended November 24 amounted to 672,923 bushels, as compared with 764,434 bushels in the preceding week.

The course of prices of wheat options at New York and at Chicago (at 1 P. M.) during the week has been:

	New York.				Chicago.	
	Nov.	Dec.	Jan.	Feb.	Dec.	Jan.
Fri. Nov. 23	$1.10½	$1.11¼	$1.13⅜	$1.15⅝	.96¾	.97¾
Sat. Nov. 24	1.11¼	1.11	1.13⅜	1.15⅛	.96⅛	.97⅛
Tues. Nov. 27	1.12¼	1.12¾	1.15	1.17	.98½	.99⅛
Wed. Nov. 28	1.11½	1.11⅜	1.13⅞	1.17	..	..

INDIAN CORN.

The movement in prices of Indian corn has been like unto that of wheat. On Saturday it was relatively weak and very dull, and quotations dropped away ½@⅝c. per bushel. Monday was observed as a holiday. On Tuesday it was found that Chicago had developed considerable strength in corn on Monday, and that a gain of 1½c. had been recorded there. Tuesday found corn in very active demand here in sympathy with the movement west, and the gain for the day amounted to 2c. per bushel. Exports of this grain have been better than those of wheat, but no special animation in foreign shipments has been noted. The believers in the present range of prices say the present demand for corn will loosen a great deal that has been held back by first hands, and that this will be sure to cause a reaction. On Wednesday Indian corn dropped ½@¼c. from causes similar to those affecting wheat. On Friday, after somewhat striking fluctuations, there was shown a gain of from ¼ to ¾c.

The quantity of corn in store at New York and vicinity on November 24 was 3,291,878 bushels, against 3,647,688 bushels a week previous, six times as much as on November 25, 1882.

The receipts of Indian corn at Chicago, Milwaukee, St. Louis, Detroit, Indianapolis, Toledo, and Peoria, for the week ending November 24, were 2,029,995 bushels, against 1,889,506 bushels in the preceding week, and the shipments were 2,012,415 bushels, against 1,895,388 bushels in the week ending November 17. The receipts at the seaboard ports in the week ending November 24 were 917,610 bushels, against 1,009,496 bushels in the preceding week, and the exports were 501,556 bushels, against 497,697 bushels in the preceding week.

The course of prices of Indian corn options at New York and Chicago (at 1 P. M.) during the week has been:

	At New York.			At Chicago.	
	Nov.	Dec.	Jan.	Dec.	Jan.
Friday, Nov. 23	.60¾	.61	.62	.50	.50
Saturday, Nov. 24	.60½	.60¾	.61⅝	.49⅜	.49½
Tuesday, Nov. 27	.62½	.63	.64	.53	.53¼
Wednesday, Nov. 28	.62½	.62½	.63⅜	..	..

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Nov. 23.		Nov. 30.	
No. 2 flour	$2.25	@2.75	$2.25	@2.75

Total bushels	52,637,266	51,211,826	32,806,195	48,100,559

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: The produce movement is active.

From Philadelphia, Pa.: There has been no improvement in the flour trade. Supplies are liberal; demand is light, and, with few exceptions, prices favor buyers. The grains have been excited and higher, under speculative influences, among which "war news," the expected withdrawal of French restrictions on the importation of American pork and the uncertainty concerning the movement and condition of the new crop of corn, have played an important part. Wheat has advanced 1@1½c., and lost half of the advance. Corn has been 2½c. higher, and is still 1¾@2c. better than last week, and oats are 1½@2c. higher. Exporters have bought very little, the excitement in the market preventing the execution of the few orders received.

From Evansville, Ind.: The recent floods have done great damage to the crops in the Wabash and White river bottoms. The weather is bright and cool.

From Chicago, Ill.: Wheat is unsettled. It has advanced 1c. in sympathy with corn and provisions, but with no shipping demand. Fluctuations are sharp. The estimated increase in Chicago for the week is 600,000 bushels. Lost the advance. The general feeling was that a severe break would follow the downward reaction in corn. The stock is the largest ever here. Corn is excited with a sharp buying to cover shorts; advanced 1½c. Very irregular. Shipping demand moderate, mainly for low grades. Oats are active, chiefly to cover contracts for futures. Receipts are heavier than ever at this season.

From Milwaukee, Wis.: Wheat receipts for the week average 70,000 bushels daily, the roads being fine and farmers selling freely. Shipments, too, increased, but chiefly to make room in the elevators. Stocks increased 150,000 bushels this week. The milling demand is fair, chiefly for low grades suitable for making cheap export flour. Prices have advanced 2@3 cents in sympathy with corn and provisions. Flour is dull and weak under the advance of eastward freights, but millers think freights will recede. Production is falling off, averaging 3,600 barrels daily.

From St. Louis, Mo.: There is a better demand for high grades of flour, but low grades continue dull. Wheat receipts are large on a steady demand at small advances. Corn receipts are also increasing, and prices are upward with a fine shipping movement.

From Kansas City, Mo.: Flour is dull and weak.

From Minneapolis, Minn.: The weather has been moderately cold and dry during the week with no snow thus far. The rivers are all unusually low. The movements of wheat has fallen off owing to the lack of storage. Receipts are 470,000 bushels. Stocks in St. Paul and Duluth have increased about 800,000 bushels. The present stock in the elevators tributary to this city, including St. Paul and Duluth, which hold 1,800,000 bushels, is about 10,000,000 bushels. The market is strong and a shade higher. No. 1 hard is selling at $1 spot, and $1.11 for May. Flour is in fair demand, and firmly held. The production of the city mills for the week has been about 21,000 barrels daily. Shipments for the week were 129,500 barrels.

From St. Paul, Minn.: Wheat receipts are heavy. Shipments are fair and money is close. The demand for money is active, especially from operators desiring to buy and hold wheat.

From San Francisco, Cal.: Wheat is firm at an advance of 2½c. per cental since last report. The weather is favorable for the crops.

From Baltimore, Md.: There is a moderate local inquiry for flour, and the market is quoted firm with an upward tendency.

From Wilmington, N. C.: In provisions, breadstuffs and grain prices are improving and more business doing.

From Nashville, Tenn.: Flour is steady. Wheat is very quiet. Corn dull and receipts light.

From New Orleans, La.: Grain is nominal. Receipts of corn are 135,000 bushels and wheat 50,000; exports of corn are 90,000, and wheat none; stocks of corn are 333,000 and wheat 50,000 bushels. Flour is steady, but quiet.

PROVISIONS.

The advance of prices in grain during the week has been more than equaled by that in hog product, and the excitement among packers of and dealers in the latter has considerably excelled the renewed interest observed among grain speculators. Not only have orders to buy been frequent at home, from sources which want the goods for legitimate trade uses as well as from speculators, but foreign dealers have called for added supplies and the urgency of the call from the other side has had a most pronounced effect in favor of highest prices. On Monday the Chicago market advanced 10@15c. for pork and 2½@5c. for lard. Tuesday there was a further advance at the west of $1.05@1.15 on pork and 50@60c. on lard. At New York, on Tuesday lard advanced 50@55c from the highest quotations made on Saturday. Spot pork was strong and at the close Tuesday, mess had advanced $1.00 from Saturday's prices, and other varieties half as much. Packers of bacon were ¼c. in advance of shippers' limit.

The anxiety of the shorts in lard to cover resulted, of course, in very heavy transactions, and the attendant excitement was rivaled only by that attending the collapse of the Chicago lard corner last July. The basis of the boom in hog products has been due, outside of that owing to a proportion of buyers believing that this is a good time and that prices are low enough to invest, to the published reports that the French government has decided or is about to shortly rescind its decree prohibiting the importation of American pork. The meaning of the repeal of the French law can best be illustrated by recalling that in the four years preceding it (March, 1881,) the United States sent over 60,000,000 pounds of hog products to France. The gain thus far on pork since November 1, 1883, is $2.50 per barrel, and on lard 1½c. per pound.

The following shows the export of hog products for the week ending November 24, 1883:

	Pork, pounds.	Bacon and hams, pounds.	Lard, pounds.
1883	4,825,800	26,379,334	19,372,817
1882	3,302,200	17,078,123	19,703,912

The export of provisions from the Atlantic ports for the week ending November 24 were as follows:

	Pork, barrels.	Bacon and hams, pounds.	Lard, pounds.
New York	4,691	4,953,031	4,119,020
Boston	10	530,438	297,428
Portland	....	.....	.....
Montreal	647	597,900	306,040
Philadelphia	....	1,000,000	115,500
Baltimore	8	362	180,331
New Orleans	7	.....	3,200
Totals	5,633	7,087,731	5,021,519
Previous week	6,804	6,736,436	7,053,132

The prices for leading hog products in New York on the days named were:

	Nov. 24.	Nov. 27.	Nov. 28.	Nov. 30.
Lard, west. spot	8.17½c.	8.75c.	8.78c.	....
Lard, Dec	8.10	8.55	9.00	8.65c.
Lard, Jan	8.24	8.75	8.70	8.85
Pork, mess, spot	$12.75	$13 50	$13.50	$13.75

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Pork is active and excited and has advanced 40c. on covering by shorts. Lard advanced 30c. per 100 pounds. Prices were unsettled but firm at noon. There is no shipping demand for pork, lard or meats. Hogs are active and 10c. higher, due to the strength in provisions. Quality generally good. Cattle strong. Shipping and local demand active.

From St. Louis, Mo.: Provisions have been booming and values are now high and strong, bu the movement has quieted. The cattle demand is heavy at the advances, but the supply quite light. Hogs are in large offering and sell freely at upward values.

From Kansas City, Mo.: Provisions steady and prices firm. Cattle receipts fell off slightly. Range cattle have declined somewhat, but close steady; shipping grades are active and firm, with an upward tendency. Hog receipts are slightly reduced; values during the week advanced 20c. to 25c., reaching the highest prices for several months, closing strong at $4.70 to $4.80 per 100.

From New Orleans, La.: Provisions are active and stronger. The cattle market is firm. Mules are quiet. Hogs are very active and receipts very heavy.

DRY GOODS AND CLOTHING.

The dry goods market for the week has shown no material change from several preceding weeks. Business is quiet, but as good as at this season last year, and on the whole fairly satisfactory. Two holidays in the week have had a tendency to make trade duller than it would have been otherwise. Local trade is mostly in packages and out-of-town orders are only to supply current wants. Country merchants at this season only buy to repair stocks. Woolens are reported rather less active than at the corresponding time last year. A fair trade is reported in fancy goods for the holidays, though perhaps of less magnitude than last season. The conservative feeling which has attacked dealers has brought trade down to a more substantial basis. Collections generally are reported good.

The wholesale clothing trade is dull, but fully as good as last year at the corresponding time. Jobbers are doing as much as they expected at this season, and report the condition of out-of-town trade fully equal to that of last year. Business is for current wants, and no particular change is expected much before February, although December will bring a few southern and western buyers into the market to replenish stocks. Collections are reported very satisfactory.

The imports of dry goods for the week ending November 29 at the port of New York, as compared with last week, are as follows:

	Pkgs.	Value.
Total entered for consumption	6,769	$1,451,648
Total withdrawals from warehouse	1,540	302,021
Total placed in bond	2,018	334,562

The total value of dry goods imported last week was $1,237,193.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: The dry goods movement is fully equal to that of last year. Cooler weather has stimulated it some.

From Boston, Mass.: There has been no movement of importance in either cottons or woolens. The weather was unfavorable for distribution of seasonable goods. Trade throughout New England somewhat backward. Prices unsteady.

From Philadelphia, Pa.: The general market has ruled very quiet, package buyers operating with caution and jobbers' sales being limited to holiday specialties or small lines of seasonable fabrics required for reassortment. Cotton goods are accumulating and the market favors buyers, particularly on the less popular brands. The situation for woolen goods continues unsatisfactory.

From Pittsburgh, Pa.: For the end of the season dry goods have been in good demand the past week, trade having been improved by cooler weather.

From Detroit, Mich.: In dry goods orders for reassortment are up to the average at this season.

From Chicago, Ill.: Dry goods, millinery and notions are meeting a satisfactory order trade. The demand is largely for holiday goods. The general verdict is that sales exceed that for the same time last year.

From Peoria, Ill.: Dry goods merchants report a fair trade.

From St. Louis, Mo.: Absence of winter weather is hindering the dry goods movement, and trade is duller than was hoped for. Stocks are very complete, at steady prices.

From Kansas City, Mo.: Dry goods sales are in moderate volume; the season is nearly over and small sorting orders are the rule.

From Minneapolis, Minn.: The dry goods trade holds out well.

From St. Paul, Minn.: Mild weather retards trade for clothing and dry goods. The former is rather quiet and the latter fairly active.

From Baltimore, Md.: The dry goods market is unchanged. But few orders are coming in, and these are only for immediate wants.

From Norfolk, Va.: Dry goods jobbers are now doing only a moderate business.

From Wilmington, N. C.: Dry goods are dull, and few orders are coming in. Collections are moderate.

From Savannah, Ga.: Dry goods show but little change. There are no buyers here yet for Christmas stocks. Country merchants are not replenishing as freely as last season at this time.

From Memphis, Tenn.: Wholesale jobbers of dry goods report the volume of sales as showing decrease, but say business in that line is good for this season of the year.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Wholesale clothiers have not done anything worth specifying this week. Retail dealers have been waiting for a cold spell in order to move their heavy goods.

From Chicago, Ill.: Clothing is dull, and sales are restricted to small orders. Business for the week is unsatisfactory.

COTTON.

The market at New York for spot cotton for the week ending November 30 (which is two days short owing to the closing of the exchange on Evacuation and Thanksgiving days) has been firm and steady. The demand has however been very light. Prices advanced a point on Tuesday and closed last night at 10 9/16c. against 10½c. last Friday. The sales for the week have been as follows: For consumption 730 bales and for speculation 550, making a total of 1,280 bales, against 4,195 last week. Included in the above are 132 bales to arrive. Deliveries on contract amounted to 800 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	Last week.	Last year
Ordinary	8 5-16c.	8¼c.	7⅞c.
Strict ordinary	8 13-16	8¾	8 5-16
Good ordinary	9⅜	9 9-16	9⅛
Strict good ordinary	9½	9⅞	9 9-16
Low middling	10 3-16	10⅛	10
Strict low middling	10⅜	10 5-16	10¼
Middling	10 9-16	10½	10 7-16
Good middling	10 13-16	10¾	10 11-16
Strict good middling	10 15-16	10⅞	10⅜
Middling fair	11 7-16	11⅜	11⅜
Fair	12 3-16	12⅛	12⅛

STAINS.

	This week.	Last week.	Last year
Good ordinary	7 7-16	7⅜	7½
Strictly good ordinary	8 11-16	8⅝	8 5-16
Low middling	9 5,16	9¼	9
Middling	10 3-16	10⅛	9 15-16

The market for spot cotton closed quiet.

The future market has been steady and easy. Business has been very moderate. Prices have been lower, quotations last night showing an average decline of 4 points for near months and 2 for later ones. The total sales for the week aggregate 274,100 bales, against 376,800 last week and 429,900 for the same week last year.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	Last week.	Last year.
December	10.61	10.65	10.26
January	10.69	10.74	10.30
February	10.85	10.88	10.41
March	11.00	11.03	10.51
April	11.14	11.16	10.62
May	11.26	11.28	10.73
June	11.39	11.40	10.80
July	11.51	11.52	10.96
August	11.60	11.62	11.06

The market for futures closed dull.

The southern markets have been quiet and firm. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	To-day.	Last year.
Galveston	3,746	10⅛	9⅞
New Orleans	26,000	10¼	9⅞
Mobile	3,700	10	9¾
Savannah	8,900	10 1-16	9¾
Charleston	5,000	10⅜	10
Norfolk	9,100	10 3-16	10
Baltimore	2,270	10⅜	10¼

The total receipts of cotton at the ports since September 1 are 2,409,633 bales against 2,422,434 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	Last year.
Galveston	343,599	354,065
New Orleans	695,777	548,092
Mobile	131,055	152,682
Savannah	417,887	434,115
Charleston	268,895	304,503
Wilmington	61,212	61,743
Norfolk	300,508	350,221
Baltimore	12,196	6,616
New York	12,803	26,667
Boston	26,317	46,765
Philadelphia	....	18,192

The total receipts for the week were 221,757 bales, against 221,973 last week, and 254,084 for the same week last year.

The receipts at the twenty-four interior towns usually reported were about 96,617 bales, against 99,598 bales last week and 104,926 bales for the corresponding week last year. The shipments for the week were 92,180 bales, against 95,550 bales last week and 100,301 bales for the corresponding week last year. The stocks for the week were 325,059 bales, against 325,426 last week and 236,193 for the same week last year.

Below will be found the receipts at each of the ports for the week ending November 30, 1883, with comparisons for last week and the same week one year ago:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	5,740	7,291	2,892	6,406	5,385	5,274
New Orleans	7,808	14,851	8,823	5,471	11,052	10,061
Mobile	1,390	4,376	4,180	1,053	1,011	2,057
Savannah	4,538	5,079	6,272	5,209	4,269	4,350
Charleston	2,875	4,000	1,960	3,405	2,375	2,771
Wilmington	799	719	1,423	470	250	1,828
Norfolk	4,129	6,205	6,517	5,896	5,296	5,586
Baltimore	1,021	270	191	150	....	394
New York	137	408	308	329	627	401
Boston	872	765	1,350	892	1,058	....
Philadelphia	20	57	....	....	....	12
Totals	29,419	44,616	33,916	29,941	31,923	38,734
This day last week	28,874	49,753	31,036	27,844	40,083	32,164
This day last year	45,490	53,843	41,499	28,592	40,898	34,699

The market for the week at Liverpool for prompt delivery uplands has been steady, with a fair demand, which was freely met. Quotations for middling uplands show an advance of 1 point, the closing price last evening being 6d., against 5 15-16d. last week. The future market has been dull, with slightly lower prices. Quotations show a decline of 1 point for near months and 2 for later ones as compared with last week.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
November	5 63-64d.	5 63-64d.	5 60-64d.
November-December	5 57-64	5 60-64	5 55-64
December-January	5 58-64	5 59-64	5 51-64
January-February	5 58-64	5 60-64	5 52-64
February-March	5 61-64	5 63-64	5 54 64
March-April	5 61-64	6 1-64	5 55-64
April-May	6 3-64	6 3-64	5 57-64

The market for futures closed barely steady.

The sales for the week at Liverpool were 71,000 bales (of which 41,000 were American), against 62,000 (of which 41,000 were American) last year. The sales for export were 4,600 bales, against 9,400 bales last year. The sales for speculation were 6,200 bales, against 1,180 bales last year. The amount forwarded was 16,500 bales, against 18,000 bales last year. The stock in port is 467,000 bales (of which 265,000 are American), against 505,000 bales (of which 252,000 were American) last year. The total imports for the week were 118,000 bales (of which 86,000 were American), against 101,000 bales (of which 91,000 were American) last year, and the amount afloat 292,000 bales (of which 245,000 are American), against 289,000 bales (of which 235,000 were American) last year.

The Manchester market closed dull.

The Havre market closed quiet.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Trade is dull. Spinners are buying only in small lots for actual wants. Prices, however, have undergone no change.

From St. Louis, Mo.: Cotton is slightly upward and firmer. Eastern spinners are appearing here again, and a good foreign inquiry continues.

From Baltimore, Md.: Cotton is quiet; the demand is only moderate.

From Norfolk, Va.: The receipts of cotton the past week were the largest of the season.

From Wilmington, N. C.: Cotton is quiet and steady and the demand is fair. Receipts falling off.

From Savannah, Ga.: Cotton is coming in slow and business is hampered, but the undertone of the market is very firm for higher prices. The impression prevails that the excess of last season's growth of cotton cannot balance the shortness of this season, but the variance between buyers and sellers continues, and the market in a general way is dull.

From New Orleans, La.: Spot cotton advanced 1-19, except for middling and good middling, which are up ⅛. Futures are four to six points higher. Movement of former liberal, and of the latter is fair.

From Memphis, Tenn.: The cotton market is firm. Middling is quoted at 10c. The stock on hand is 85,000 bales.

WOOL.

This has been a very quiet week in the general wool market. The recurrence of a holiday is partly responsible for the prevalent dullness, but the unsatisfactory condition of the goods trade and the fact that a good many manufacturers are fairly supplied with wool, in consequence of previous purchases in the country as well as from eastern dealers, are the principal causes of the lack of activity in the trade. Transactions are mostly in small lots proportioned to the immediate wants of the mills. The supply in first hands is, however, steadily dwindling down, and as the strength of foreign markets renders improbable any large additions to stocks from the other side of the ocean unless prices in American markets go higher, the majority of holders express confidence in the situation and decline to accept business at concessions. There is little doubt but that consumptive requirements will exhaust stocks before the new clip begins to come forward, and while there is no immediate prospect of any material advances the indications point to higher rather than lower prices in the future. Latest reports from English and colonial markets show unabated firmness, and domestic offerings at interior points continue very light.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: There is no change to notice in the market for wool. The demand has been fair, the sales amounting to 2,077,400 pounds of all kinds. The sales of Ohio and Pennsylvania fleeces have been a little over 100,000 pounds at 36@38c. for X, 38@40c. for XX, and 41@42c. for XX and above. Michigan X fleeces have been selling at 33@35c., and a very choice lot sold at 36c. per pound. Combing and delaine fleeces are firm and in demand, but the stock is light. We quote from 39@42c. for fine delaine, and 44@45c. for No. 1 combing. Unwashed wools rule steady and in fine demand at the usual wide range of prices. California wool has been quiet and the sales comprice 237,000 pounds spring at 23@26½c., and small sales of fall at unchanged prices. Pulled wools have been quiet and sales have been at 23@28c. for common and good supers, and 40@43c. for choice. Foreign wools have been quiet.

From Philadelphia, Pa.: The market has ruled dull but firm, holders refraining from any pressure to realize in view of the exceptionally small stocks, particularly of fine washed fleeces and long staple wool.

From Chicago, Ill.: Wool is quiet on fair orders for small lots. Stocks moderate.

IRON AND STEEL.

The American pig-iron market is quite as dull as last reported. Prices are nominally the same, but for spot cash are in reality lower, and the outlook is for a lower basis still. Prices of No. 1, while quoted at $20.50, are for cash $20. No. 2 X, while $19.50, may be obtained for $19. And grey forge, which is named at $17.50, may be expected for cash offers at 25c. less. The demand is moderate, and, while production is more limited, the former has not caught up with the latter. Manufactured iron is yet dull. Less than 2c. is accepted for cash offers, and makers find no satisfactory outlook this side of the latter part of January or February. There is some demand for sheet and plates and a better request for structural, but merchant bar is stagnant. During the past week the *Times* published a dispatch from Cleveland saying that the steel-rail trade was especially depressed by the sale of steel rails at $33.50 per ton, against the recently cut price to $35. This was not true. The report was the outcome of the alleged sale of steel rails at the west at $35. The telegram was based on the supposition that rails at $33.50 at the west were equal to $35 at Pittsburgh. But where authority was gained for the statement that the Lackawanna Steel Company had sold rails at $33.50 it is impossible to say, for it is not true. The authority for the denial is the president of the company. The Scotch pig iron market is lower and not stronger. We quote:

Coltness	$22.00	Gartsherrie	$22.00
Summerlee	21.75	Eglinton	20.00
Dalmellington	20.00	Glengarnock	21.00

The arrivals this week amoumt to about 1,500 tons and sales are nominal. November's sales will perhaps aggregate twice those of November 1882, Those of 1883 to date will exceed those of 1882 to a like date at New York. None of that arrived last week was stored. The total in stock is about 5,000 tons.

THE AMERICAN IRON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Forge has been moving in large lots at $18@$19, and foundry less freely at unchanged prices. Muck bars and blooms are dull. Merchant bar is weaker, ranging from 1.80c. to 2c., with some small lots going at 2.10c. Nails are weak and dull. Plate and structural iron are under fair inquiry for January to February delivery. Steel rails are moving in 1,000 to 5,000 ton lots at $35@$36.50. Old rails sell in small lots.

From Pittsburgh, Pa.: There are no encouraging features in the iron market and the same depressed condition of affairs prevails. The demand for pig iron is very limited; for immediate wants only. Mill iron is selling at $17 cash, and $18 at four months. Foundry iron is $18@$20 at four months.

From Cleveland, Ohio: There is no change in the iron market.

From Detroit, Mich.: In iron the market continues dull and unchanged.

From Chicago, Ill.: Pig iron is unchanged. Sales are in a small jobbing way, with no pressure to sell, and stocks declining.

From St. Louis, Mo.: Both pig and manufactured iron are quieter than for weeks past, but this dullness is usual here towards the close of the year. Stocks are low throughout and values fairly steady.

THE HARDWARE MARKET.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Hardware, metals, tinner's goods, bar iron, and nails are slow. The demand for all articles is discouraging.

From St. Paul, Minn.: Hardware is less active, though there is a fair business. Heavy iron is quiet, buyers being doubtful about the weather.

COAL.

The anthracite coal trade has been relatively dull during the week. The demand from the west continues fair, but the mild weather has interfered so much at the east that trade on the whole has been quite dull. It is reported that December will witness a reduced output at the mines, amounting in all to about half time. Stocks have been increasing and prices have been shaded rather more than ever. The product for the year so far is 27,818,896 tons, against 25,419,939 tons for the corresponding period of last year, an increase of 2,398,957 tons. There is no change to report in bituminous. Prices are the same. The efforts to strike have thus far been unsuccessful.

PETROLEUM.

The speculative petroleum market has been unsatisfactory this week. The holiday character of the week prevented special interest by operators, and the decline on Wednesday, owing to rumors of a heavy flowing well in Alleghany—afterwards denied—can hardly have been sufficient to have pleased even the bears. The net decline was 1c. per barrel. Tuesday's closing price was the same as Saturday's. The monthly report of operations was expected yesterday, but it did not come to hand. The decline of the market at the close was taken to indicate that the report would be less bullish than had been expected.

The following shows the fluctuations in prices of pipe-line certificates at New York during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, November 24	1.18⅞	1.18⅞	1.17½	1.17½
Tuesday, November 27	1.18¾	1.19	1.17½	1.17½
Wednesday, November 28	1.17½	1.17½	1.15⅞	1.16½
Friday, November 30	1.16½	1.17⅞	1.16½	1.16⅞

The refined oil market has been steady at unchanged prices during the week. Refiners have not been offering oil, though resales of contracts were obtainable in the earlier portion of the week. Crude in barrels has been quiet and steady and naphtha likewise. There was no change in case oil.

Prices with comparisons at the close of preceding weeks were last evening:

	Nov. 2.	*Nov.* 9.	*Nov.* 16.	*Nov.* 23.	*Nov* .30.
Certifi's, crude	1.09	1.12	1.17½	1.18¾	1.16⅝
Refined, 110°	8⅜	8⅜	8⅞	8⅞	8⅞
Refined, 70°	8½	8½	9	9	9
Crude, in bbls	7½@8	7½@8	7⅜@8¼	7¾@8¼	7¾@8¼
Case, plain	10⅛	10⅝	10⅜	10⅞	10¾
Naphtha	6	6	6	6	6

The export of petroleum from the United States, crude equivalent, for the week ending November 24, was 10,299,536 gallons, against 16,348,358 in the preceding week. The total export from the United States since January 1 was 588,045,334 gallons, against 570,297,767 gallons in the corresponding portion of 1882, a gain in the current year of 17,747,567 as compared with the gain of 15,352,898 gallons reported last week. The exports from New York, for the week ended November 24, amounted to 7,530,450 gallons, and for the year from January 1 to 481,117,731 gallons, against 447,445,726 gallons in a corresponding portion of 1882, showing a net increase from New York alone of 32,672,005 gallons exported between January 1 and November 24, 1883, as compared with ten months and twenty-four days' shipments last year.

OCEAN FREIGHTS.

The general ocean freights market has been dull, owing mainly to a lack of demand. Petroleum freights have led in being firm, but the request has been moderately active only. Grain freights have been fairly active by regular continental and English steam lines, but the dearth of exports of this character have restricted even them. South American and West Indian freights have been fairly active. The lack of tonnage has contributed to the moderate success in maintaining rates in the face of diminished request. A feature has been that some sailing vessels have been secured in place of steam for general cargoes. Cotton has gone abroad most actively. The competition of steam with sail during the past five years has caused a great reduction in rates per sail, and has resulted in less money for steam vessels than would be the case were not sail vessels in abundance waiting cargoes.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Business in the chartering line has continued quiet, but the supply of tonnage in port is moderate, and rates are well maintained. Grain vessels to Cork for orders are quoted at 4s. 9d.; berth room for grain to Liverpool at 5d.; and petroleum charters to continent at 3s. 7½d.

From Wilmington, N. C.: In freights, foreign spot tonnage is ample. Coastwise, steady.

From Savannah, Ga.: Freights have been oversupplied for coastwise tonage, and charters can only be had on long loading times.

From New Orleans, La.: Freights are firm.

GROCERIES.

[By Telegraph to BRADSTREET'S.]

From St. Paul, Minn.: Groceries are moving more actively. Sales have increased over two weeks ago incidental to the holidays.

From New Orleans, La.: Coffee is steady; fair is 12¾c. Sugar is steady and molasses firm. Crop estimates are about 185,000 hogsheads. Rice is steady.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Trade, as usual during Thanksgiving week, has been light, but the number of buyers here from leading cities is about seventy-five, and the outlook is favorable. There will be a general starting up of the factories next week. Large contracts are still backward, but there are enough orders in hand to keep most of the operatives employed until more comes along.

From Chicago, Ill.: Boots, shoes, and rubbers are in moderate order demand.

LEATHER.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Leather is steady, and the demand is fair for small lots.

TOBACCO.

[By Telegraph to BRADSTREET'S.]

From Baltimore, Md.: There is a good demand for all grades of Maryland tobacco and prices are well maintained.

LUMBER.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Lumber is weak and the demand is moderate.

From Minneapolis, Minn.: Lumbermen are sending gangs of men and teams to the woods for the winter campaign, at cutting logs, but the force going is not so large as last season. The lumber market is quiet but steady.

VIRGINIA PEANUTS AND OYSTERS.

[By Telegraph to BRADSTREET'S.]

From Norfolk, Va.: Peanuts are now coming in briskly. The Virginia crop of nuts will net 250,000 bushels, but the quality is not up to the standard. The oyster business so far is not satisfactory. The weather has been too warm.

NAVAL STORES.

[By Telegraph to BRADSTREET'S.]

From Savannah, Ga.: Naval stores continue dull, and the large stocks on hand with the small demand creates an uneasy feeling as regards any increase of prices except for best grades of rosins.

ATLANTIC FISHERIES.

[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: The fisheries business is steady and increasing yearly.

ASIATIC AND AUSTRALIAN ADVICES.

[By Telegraph to BRADSTREET'S.]

From San Francisco, Cal.: Advices from China and Japan report continued dullness. Australian news is generally favorable. The crop outlook is good, and trade is fairly active. Wool sales are attended by American buyers, who competed for better qualities at full rates. New Zealand advices are satisfactory.

ABSTRACT OF CONTROLLER KNOX'S REPORT.

In connection with the possible redemption of all outstanding 3 per cent. bonds within three years Controller Knox says: This will reduce the bonds held by the banks from $353,000,000 to $151,000,000, and would cause a contraction in the national bank circulation of about $60,000,000 per annum. It is evident that, unless there is additional legislation, the bonds held as security for circulation will rapidly diminish. New legislation may, however, postpone the payment of the public debt or cause the profit on circulation to increase sufficiently to induce the national banks to invest in the long 4 per cents, which are not to mature for a period of twenty-four years. The contraction of the bank circulation may be avoided by reduction of the redundant revenue, and there is no doubt that this is the true policy. The contraction of the bank circulation may also be avoided by the conversion of the long bonds into 3 per cents by offering inducements to the holders of these bonds to exchange them for 3 per cents to mature in 1907, the government paying to the holders thereof a reasonable amount for their difference in value. The principal objection made to this proposition is that the government would pay to the holders a large premium upon the bonds held by them, but it is evident that, in the course of two or three years after the 3 per cents are paid, if there is no reduction in the revenue, the surplus will enormously increase, unless the long bonds are then purchased by the government at a rate to be then fixed by the holders thereof, which will be a rate much higher than that now proposed. The premium to be paid to the holders of these long bonds may be considerably reduced by providing that the circulation to be issued upon the proposed bonds, when deposited by the national banks as security therefor, shall not be subject to the present tax of 1 per cent. per annum, or by postponing the time for their payment. Such legislation would make the new bonds more valuable for this purpose than for any other, and would be likely to prevent their withdrawal until maturity, if once deposited, and, for this reason the bonds would be more desirable as a basis for circulation than any which have heretofore been issued. The contraction would also be avoided by providing for the removal of the tax on circulation and the increase of the amount of circulation to be issued to the banks upon the bonds deposited by them.

The controller considers that, so long as there is a sufficient amount of United States bonds outstanding, legislation should be so shaped as to continue them in use as a basis for circulation. In connection with the ratio of circulation to value of bonds deposited as security, therefore, the controller says that, up to the present time, the government has gained about $400,000 from the loss or destruction of national bank notes. The amount of the gain accruing from the non-redemption of lost national bank notes can soon be approximately estimated, and should be authorized to be carried to the credit of an "insolvent bank redemption" account in the office of the treasurer. If this fund should be used for the purpose of redeeming the notes of insolvent national banks, the avails of whose bonds might be insufficient for that purpose, the issue could be safely increased to a rate not exceeding the lowest market value of the bonds during the calendar or fiscal year previous to the deposit. Experience has shown that if, instead of $90 upon each $100 of bonds, $100 of circulating notes had been issued upon every $70 of United States bonds deposited, there would not have been any loss to the government or to the holders of the circulating notes of any of the national banks which have failed during the twenty years, but that there might have been an additional loss to the depositors, depending upon the character of the assets held in place of the portion of bonds which, on this supposition, would have been released. Circulation could be safely issued to many of the national banks which have an accumulated surplus of more than 20 per cent. of their capital to an amount exceeding their capital or bonds deposited; but Congress would not be justified under the present system in authorizing the issue of circulation beyond the amount of security deposited, as such legislation would offer inducements to unprincipled men to organize banks and issue circulation for fraudulent purposes. The establishment of an "insolvent national bank redemption" account would insure the government against any possible loss, and the increase of circulation upon bonds, together with the repeal of the tax upon circulation, would undoubtedly have the effect of supplying the country with bank circulation for the next twenty-four years, and probably without affecting the safety fund thus provided to the amount of a single dollar. The controller discusses this scheme at great length, but considers the conversion of long bonds into 3s more desirable than an increased rate of circulation. The controller believes that the large contraction of the currency now imminent should not be allowed to take place too rapidly, or the deficiency caused by such contraction be replaced by a substitute less desirable than the bank notes now in circulation, and gives analysis of several plans which have been suggested, all of which he finds objectionable.

THE SHAW FAILURE.

Regarding the settlement of the Shaw failure the Boston *Herald* does well to say:

"Those who have read accounts of the meetings held by the creditors of Messrs. Shaw Brothers cannot fail to have observed the very delicate way in which the creditor side of the affairs of that estate is being handled. It would seem to be the belief of a large number of the creditors that the members of the insolvent concern were endeavoring in every way to evade a just and honorable settlement; that they were disposed to make every dollar they could out of those who had confided in their honesty, and who, under any circumstances, will suffer serious loss in consequence of this confidence. Furthermore, it would seem to be the opinion of these creditors that the assignee appointed by the firm was acting in its interest rather than in the interest of the holders of its notes. At times, the feeling of indignation at the treatment they are receiving bursts out, and forcible though unguarded words are uttered; but, as a whole, the creditors have exhibited a moderation in their statements and in their demands which is worthy of the highest commendation. It is no doubt their opinion that, while vigorous denunciations might relieve their minds, it would not be likely to further an easy settlement of the estate, and that such a settlement, rather than the exposure of the Shaw methods of dealing, is what is expected of them. It is, however, to be hoped that the creditors will not carry this moderation to an undesirable extreme. They owe it to the business community that an example shall not be made of what might be considered compounding with knavery. It would be better far for almost all of the creditors, particularly the banks, to cut their dividends down to 20 per cent., by forcibly prosecuting their claims, rather than, by accepting a greater amount, permit it to be said that the insolvent firm, by the shrewdness and sharpness of its members, had succeeded in making a large sum of money out of its failure; for such an example could not fail to prove a contagious one."

TINNED FOODS.

The *Journal of the Society of Arts*, London, gives publicity to the following statements:

"The *Medical Times* says that tinned meats, soups, vegetables, and more especially fruits, are all, without exception, contaminated by metals; such is the irresistible conclusions of recent scientific investigation. In 1878, Mr. Albert B. Menke communicated to the *Chemical News* results of analyses of a tin of lobster, one of apples, and another of pineapple; the latter contained tin dissolved in the juice equal to 1.3 grain per pound, the lobster and apple a much smaller quantity. Mr. Hehner in 1880 communicated to the *Analyst* the results of a prolonged and thorough investigation of the subject. He found tin in tinned French asparagus, American asparagus, peas, tomatoes, peaches, pineapples, white cherries, red cherries, marmalade, corned beef (five different brands), ox-cheek, ox-tongue (three kinds), collared-head, tripe, oysters, sardines preserved in oil, salmon, lobsters, schrimps, curried fowl (two kinds), boiled rabbit, boiled mutton, roast chicken, roast turkey, soup and in three brands of condensed milk. The amount of tin found does not appear large —*e.g.*, in the milk one-tenth of a grain per pound, in one of the soups half a grain per pound, and in a pound tin of preserved oysters seven-tenths of a grain per pound. On a later research, Mr. Wynter Blyth has found far larger quantities. In a recent report to the vestry of St. Marylebone, detailing the examination of twenty-three samples of tinned apricots, tomatoes, pineapples, and cranberries, the amounts found, calculated as stannous hydrate, range from 1.9 grain to 14.3 grains per pound, the mean amount being 5.2 grains. The juice and fruit in some instances had a metallic taste. Several of the tins showed signs of corrosion. The little that is known of the action of stannous hydrate may be summed up in a few lines. Doses of about .174 gramme per kilogramme of body weight cause in guinea pigs death with signs of intestinal irritation; but with doses smaller than .17 to .2 gramme the effects are uncertain, and the animals generally recover. Hence, supposing a man to be affected in the same proportion, he would have to take from three to four drachms, or consume at a meal 10 pounds of the most contaminated of Mr. Wynter Blyth's tinned fruits. But it is not a question of immediate deadliness; it is rather one for inquiry as to the action of small repeated doses continued for a long time.

THE FRENCH COLONIES.

The last number of the "Annuaire Statistique de la France," published by the Minister of Commerce, gives the returns of the census taken in the French colonies two years ago. According to this return, the populations of Martinique, Guadeloupe and Guiana have increased from 156,799, 136,311 and 17,335 since 1872 to 166,100, 158,470 and 17,374, whereas in the island of Réunion there has been a decrease from 193,362 to 180,814. The population of Senegal was 190,789 when the census was taken, but it has since then been reduced a considerable extent by the epidemic of yellow fever. The establishments at Pondichery and other places in the East Indies numbered 283,022 inhabitants, of whom 61,092 were registered electors, while the population of Mayotte, Nossi-Bé, St. Marie de Madagascar, St. Pierre, and other places on the east cost of Africa was 32,406. The population of Cochin-China numbered 1,550,497, of whom 1,472,000 were natives, the rest comprising 58,500 Chinese, and only 1,954 Europeans, of whom more than half lived in the town of Saigon, which had a population of 14,028.

THE LESSON OF PETER COOPER'S LIFE.

In an anecdotal paper on Peter Cooper, in the December *Century*, the writer, Mrs. Susan N. Carter, says: "The highest lesson taught by Mr. Cooper was the lesson of his own life. As much as, or more than any one I ever knew, Mr. Cooper solved the problem: 'Is life worth living?'

"Observing him carefully for a long series of years, it appeared that certain parts of his nature were cultivated intentionally, as the result of a wisdom which discriminated what was really worth caring for from what was not worthy of pursuit. Personal ambitions of selfish aims had no weight with him, and disappointments and annoyances which would have left deep wounds with many passed off from him with scarcely an observation. He was most kind and loving; but if he were usefully employed, no domestic loss or separation from friends seemed to touch his happiness seriously. He spoke often of his preference for plain living, and his habits were as simple as those of a child. Love of pomp or display never touched him in the slightest, and he had an innocent openness of character which concealed nothing. Never, under any circumstance, did he show a particle of malignity, revenge, or meanness. If people disappointed him, he passed over the wound it made and let his mind dwell on something more satisfactory. Swedenborg's phrase, 'the wisdom of innocence,' often occurred to my mind in observing Mr. Cooper. He knew what was wise, and to that his heart was given. Sensitive as any young man in all works of sympathy or kindness, the mean and bad ways of the world fell off from his perception.

"So his life passed in New York and in the Cooper Union, serene, happy, and contented. With 'honor, love, obedience, hosts of friends,' he was an example and encouragement to those who had not gained the quiet heights on which his inner self habitually dwelt."

TRADE EMBARRASSMENTS.

There were 232 failures in the United States reported to BRADSTREET'S during the past week, 4 more than the preceding week, 46 more than the corresponding week of 1882, and 74 more than the same week of 1881. BRADSTREET'S:

A Journal of Trade, Finance, and Public Economy.

PUBLISHED BY THE BRADSTREET COMPANY,
279, 281, 283 BROADWAY, NEW YORK.

Terms, $5.00 per year in advance, including postage.
SINGLE COPIES, TEN CENTS.
SPECIMEN COPIES WILL BE SENT FREE UPON APPLICATION.

As a financial and commercial newspaper the foremost purpose of BRADSTREET'S is to be of practical service to business men.

Its special trade and industrial reports; its weekly epitome of bankruptcies throughout the United States and Canada, and the summaries of assets and liabilities, are alone worth the subscription price.

The synopses of recent legal decisions constitute an exceedingly valuable feature.

As commercial transactions, in the wider sense, are coming to be more and more conducted on a statistical basis, the information contained in BRADSTREET'S is of the first importance both to producers and middle-men.

THE TRADE AND AGRICULTURAL SITUATION THROUGHOUT THE UNITED STATES AND CANADA IS REPORTED BY TELEGRAPH TO BRADSTREET'S UP TO THE HOUR OF PUBLICATION.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 8, 1883.

NOTES OF THE WEEK.

In a statement which we made before the committee of the New York State Senate, appointed to investigate the effects of speculation in staple articles upon the prices thereof, we pointed out that the record of prices did not show that fluctuations had been more violent since speculation in the staple crops came to be so widely diffused and so large in volume. We showed further that the tendency has been toward uniformity of price as exact information concerning the yield of staple crops becomes more easily accessible to the public, and as the rapidity of communication increases. A writer in the Manchester *Guardian* has been conducting an investigation into the effects of speculation in cotton upon prices, the results of which go to sustain our position. He shows, for example, that at present speculation tends to exhaust itself on dealings in futures, and that the prices of spot cotton have fluctuated less widely since 1874, when speculation in cotton futures became marked, than before that time, proving thus that the influence of speculation in futures upon the legitimate trade in cotton has been inappreciable.

There are indications that a comprehensive system of organized charity will before long take the place in our large cities of the inefficient and wasteful systems which have hitherto prevailed in most of these. In Philadelphia, the organization of charity has been attended with the most gratifying results. In New York a considerable number of the most public-spirited citizens are laboring to introduce similar methods with encouraging prospects of success. A meeting of the Charity Organization Society was held on Thursday evening last, with the object of bringing the society into more prominence and of commending its methods more directly to the understanding and sympathy of the public. The utterances of the speakers at this meeting display a commendable acquaintance with the principles which should regulate a proper system of charitable relief. It was shown that while there is, in general, no lack of charitable institutions, both public and private, but little is done by these to diminish the spread of pauperism, and that indeed the growth of the pauper class is largely due to indiscriminate public and private almsgiving. It was pointed out, further, that the old method which the society aims to displace was inefficient, through the absence of coöperation, and that the only way in which to combat the serious evil of pauperism in large cities is by obtaining a careful registration of all the poor and securing a searching investigation into individual cases—in a word by the introduction of business principles into charitable relief. These doctrines deserve wider currency than they have yet received. It is to be hoped that the Charity Organization Society will meet with the success it merits in endeavoring to extend its sphere of usefulness, and to disseminate the wholesome ideas which it has adopted among the people.

Some of the opponents of free canals pronounce the measure adopted last year a failure. This decision is based upon the fact that the tonnage of the canals for the season of 1880, when tolls were collected on freights going both ways, was greater than during the past season with no tolls upon the freight going either way. From this it by no means follows that, as has been said, the remission of tolls has been a damage to the business of the canals. It is as yet too early to judge as to the success or non-success of the measure referred to. The experience of a single season cannot in the nature of things furnish an adequate basis for a decision upon a matter of such importance. Further returns of the business of the canals must be had before the question of the expediency of last year's measure can be settled one way or the other.

Such improvement as the stock market made last week was lost this week, principally through another decline in the Villard stocks. Since the famous "squeeze" in these, some weeks ago, the common and preferred stocks of the Northern Pacific remained quite dormant, but Oregon Transcontinental maintained its activity, and frequently was made to act as a leader in little bull spurts. It has, however, been slowly working down in price in such a way as to show the steady feeding out of the stock. Early this week the Northern Pacific stocks were roused into sudden activity, and dropped rapidly from the quotations so long made for them on the tape, while Oregon Transcontinental was not behind. This made a great fright in the street, while the development of more serious disagreements among the managers of the western roads than was first thought to be the case contributed to depress prices. The election of Mr. Carlisle to the speakership was alleged to be a cause of weakness in the market. There was some truth in this, but a dozen Carlisles would not have broken prices unless there had been something wrong among the companies.

The condition of the forests of the country has of late received a considerable share of attention. The fact has been pointed out by intelligent specialists that the forests are being rapidly exhausted, and the evil results of the neglect from which they have suffered have been strikingly portrayed. It seems to be generally agreed that forests have a considerable effect in regulating the flow of rivers. It is, at any rate, certain that the destruction of mountain forests in European countries has led to irregular alternations of drouths and torrents, which have frequently proven destructive to agriculture, commerce and manufactures. Owing, probably, to the fact that as yet no serious injury has been inflicted on the mountain forests of this country, the irregularities to which we have referred have not heretofore caused much trouble in this country. If we would preserve our comparative immunity from the dangers which have followed the destruction of forests in other countries, it behooves us to take thought for the preservation of our forests, particularly of our mountain forests. The question has already become a pressing one in New York state. Although only a small portion of the Adirondack forest has been destroyed, it is said that the water supply of the Hudson and the Mohawk rivers has been seriously affected in consequence. It is even asserted that the further stripping of the forest growths will result in rendering the streams which furnish water to the Erie canal and the upper Hudson unfit for navigation. This would, indeed, be a deplorable result, and its probable evil effects on the commerce and prosperity of the state are not easily calculable. The legislature which is about to meet should take immediate action looking to the preservation of these forests.

A more than usually interesting meeting of the New York Chamber of Commerce was held on Thursday last, at which, among other things, the question of protecting the forests of the state was considered. The chamber unanimously adopted a memorial calling the attention of the legislature to the danger threatening the water supply of the principal rivers of the the state through the possible destruction of the forests, and asking the legislature to adopt such measures as will enable the state to acquire the whole of the territory known as the Adirondack Wilderness, in order that the forests of that region may be preserved. A committee was also appointed by the chamber to invite the coöperation of other associations and individuals throughout the state in securing the legislation asked for in the memorial. The Special Committee on International Bills of Lading presented a report recommending that Congress be asked to establish a form of bill of lading, the issuance of which shall be obligatory upon all vessels using the ports of the United States, or to take such other measures as may be found practicable. The committee were instructed to draft an act dealing with the subject for presentation to Congress. The subject of the disposition of the trade dollar was brought up for consideration by Mr. F. B. Thurber, who introduced a resolution approving the recommendations of the Secretary regarding this coin, and urging Congress to take early action thereon. The discussion upon the resolution revealed the existence of a considerable amount of opposition to the course suggested, and the resolution was laid upon the table. Some of the leading antagonists of the proposed redemption of the trade dollars based their opposition upon the ground that a very large proportion of the trade dollars were held by speculators.

According to the report of the Secretary of the Treasury the total ordinary receipts for the fiscal year ended June 30, 1883, amounted to $398,287,581.95, of which $214,706,496.93 were derived from customs. The total ordinary expenditures for the year amounted to $265,408,137.54, leaving a surplus revenue of $132,879,444.41, which, with an amount drawn from the cash balance in the Treasury of $1,299,312.55, making in all $134,178,756.96, was applied to the redemption of bonds. The receipts for the current fiscal year will, according to the Secretary's estimates, fall short of those of the last fiscal year by $55,000,000. The United States bonds redeemed and canceled during the year ended October 31, 1883, amounted to $112,875,850, and the net reduction in the annual interest charges by reason of these changes to November 1, 1883, was $3,935,021.75. The coinage of standard silver dollars up to November 1, 1883, amounted to $156,720,949, of which there were in the Treasury on that date $116,386,017. During the year ended November 1, 1883, the coinage increased $28,391,069, while the amount in circulation increased $4,136,321 during the same ti

COTTON REPORTING AND THE CROP OF 1883–84.

During recent years the tendency at Liverpool has been toward less violent fluctuations in the price of spot cotton. One of the causes thereof has been the improved means of communication with the cotton-growing regions of the United States and the consequent greater facility with which more or less trustworthy reports of the growing crops as to condition from planting to maturity and gathering have been procured. That such a tendency should exist is gratifying, for extreme fluctuations are in the interest of the speculator and against the spinner. In the belief that improved methods of reporting the cotton crop would still further do away with injurious fluctuations, BRADSTREET'S determined early in 1881 to enter upon the work of improving said methods. It was seen that a few leading traders were able to secure advantages by expending large sums for advance information. The need was to place better information at the command of the smallest trader for a nominal outlay, namely, the subscription price of a newspaper. A survey of the field showed that up to 1881, so far as could be seen, no real progress had been made toward a perfected system of reporting. The work of the Department of Agriculture appeared to be lacking in precision. It was evident that no well-defined principles had been followed. Success had not been achieved, nor had failure, through causes beyond control, been acknowledged. The record showed most surprising variations in the yearly differences between final estimates and actual yield. The Department of Agriculture has been giving out estimates of the cotton crop since the war. Following are the November-December estimates of the Department from 1866 to 1880, inclusive, with calculations for error:

Years.	*Estimates of final reports, bales.*	*Actual crop, bales.*	*Excess per cent.*
1866	1,830,000	2,019,000	under 10.3
1867	2,340,000	2,593,000	under 10.5
1868	2,380,000	2,439,000	under 2.5
1869	2,700,000	3,154,000	under 16.8
1870	3,800,000	4,352,000	under 14.5
1871	3,400,000	2,974,000	over 12.5
1872	3,442,060	3,930,000	under 14.2
1873	3,700,000	4,170,000	under 11.2
1874	3,666,000 to 4,000,000	3,832,000	ab't correct
1875	4,100,000	4,669,000	under 13.9
1876	4,132,000	4,485,000	under 8.5
1877	4,326,000	4,774,000	under 10.4
1878	5,197,000	5,074,000	over 02.4
1879	4,777,000	5,761,000	under 20.6
1880	5,719,000	6,606,000	under 15.5

The above estimates to 1876, inclusive, are taken from the files of the New York *Commercial Bulletin* and since 1876 from the *Financial Chronicle*.

The calculation goes to show that down to 1880, at least, the work of the Department of Agriculture has been seriously lacking in uniformity of method. So far as can be seen from its publications the Department of Agriculture was no nearer success in 1880 in reporting the cotton crop than in 1870. So much for the record of the government. About 1873 the several Cotton Exchanges in the south at Memphis, Charleston, New Orleans and other centers undertook the work of cotton reporting. The degree of success attained was so slight that their estimate of the crop of 1880 was some 20 per cent. below the actual count on September 1 following. In May, 1882, the Cotton Exchanges decided to discontinue reports of the crop on the ground that it had been "impossible to obtain such a concert of action in the method of compiling the reports from the various departments as is necessary to make them of value." Succeeding the war the *Financial Chronicle* essayed to report in advance the outturn of the crop. The success reached was, however, so far indifferent that the attempt was in due time given up. On October 29, 1870, the *Chronicle* declared in relation to the crop of that year, that "in any event a crop approximating to 4,000,000 bales, a favorite estimate with many, is not possible this year." The crop of 1870 was 4,347,000 bales. In its issue of November 11, 1871, the *Chronicle* said: "We do not care to give any estimate of the crop," meaning that of 1871–72. On October 13, 1879, the *Chronicle* gave out the following conclusion: "A correct crop estimate can never be approached—however honest the observer may be—except from one direction, and that is through a record of the weather for the whole season." Since that date our contemporary has been publishing admirable meteorological tables, but they did not prevent its going far astray in relation to the effect of the severe drouth of 1880. We make these facts not for invidious comparison, but simply as a contribution to the history of so important a matter as cotton reporting. So much for the varying success with which "estimates" of the cotton crops have been made up. The following table shows the variations in the actual crops, comparing one year with another since 1844:

COMPARISON OF EACH YEAR'S YIELD SINCE SEASON OF 1844–45 WITH EACH PREVIOUS YEAR, SHOWING EXCESS OR DECREASE IN BALES AND PER CENT.

Seasons.	*Previous seasons.*	*Total yield.*	*Excess bales.*	*Decr'se bales.*	*Excess p. ct.*	*Decr p. ct.*

The situation in respect to the needs of the cotton trade being as indicated, it was determined by BRADSTREET'S to first get reports so full from the important counties of the cotton belt that they could be published *as reports*, instead of suppressing the actual returns and in their place giving out guesses with an air of mystery. To this end regular monthly cotton reports were begun in the spring of 1881. Our work from the spring of 1881 was thus set forth on June 2 of this year:

From month to month the returns were summarized just as received, giving as much detail as possible, with the view of working out a calculation for error. There was, of course, known to be much truth in the frequent assertion that all reports from the south of injury done to growing cotton crops contained a deal of exaggeration; and, again, that the tendency of all estimates received therefrom was to understate the crop. If continuous full reports from practically all the important counties were obtained, and the results impartially given out, it was thought that the average of error could, at least to an important extent, be determined. Communication was speedily established with the business men of the south living in the immediate cotton-growing regions, it being thought that one remove from the planter was the place to get the most trustworthy information. By midsummer the reports of this journal had become so full that they were generally regarded as fairly complete monthly exhibits of the condition and prospects of the crop. The great injury wrought by the long and severe drouth of that year to the cotton plant first found adequate expression in these columns. The July report for 1881 showed that for the month the dry weather had worked serious harm to the plant on the poorer uplands, but that on the river bottoms the plant, instead of having received injury, was in a promising condition. The subsequent reports revealed the further progress of the drouth until both upland and bottom-land had received its blighting effect. The reports were given out as received, and so stated, leaving, for the time being, the calculation for error to be made by cotton factors and others. The reports were made up on a basis of percentages as compared with condition at the corresponding date of the previous year. The report published on December 3, 1881, showed, when summarized, a falling off in condition from the same period of 1880 of 28 per cent., which, after allowing for increased acreage, indicated a crop of 5,014,000 bales. At the time this was given out the current estimates of the crop were 6,000,000 bales and upwards. The amount of error in the reports sent by the business men of the south remained to be determined. The report of December 3, 1881, was based on 1,134 replies from correspondents representing 92 per cent. of the cotton-growing regions. The crop of 1881–82 was subsequently proved to have been 5,456,000 bales, thus revealing an error in the reports sent us of 8 per cent. In other words, the sum of the estimates made by the business men in the immediate cotton-growing regions was 8 per cent. too low. The calculation for error was beginning to develop. It should be noted that the results of two subsequent inquiries as to the amount of the crop of 1881-82 still on plantations revealed in each case a like error of 8 per cent., and in each case an under-calculation.

In the spring of 1882 it was decided to forsake the method of ascertaining final yield by percentages of loss or gain from previous year. The monthly reports had become so full and thorough that we undertook to get at the actual condition of the plant in each county by direct method. In getting the report published on December 9, 1882, correspondents were asked to give returns of the total yield in each county. In response detailed estimates were received from 569 out of the 642 cotton-growing counties cultivating over 500 acres each. The returns summarized pointed to a yield of 6,488,000 bales. The actual yield was 6,992,000 bales, thus revealing that the business men of the south were in their 1882 returns in the neighborhood of 8 per cent. out of the way as in 1881. A small crop had been underestimated, as is usually the case, but it remained to be proved whether the apparent rule would hold good in relation to a big crop. Until this test could be made we would have been unwarranted in adding for error in returns. It is now safe to say, so far as appears, that the business men of the south, in conscientiously sending us returns by counties of the total yield of a given crop, involuntarily underestimate the same 8 per cent. This was regarded as a most important conclusion, and one to be acted on in practice.

In getting the report of the crop of 1883–1884, given herewith, we have simply followed the methods of the previous year. Correspondents in each county were asked to send us their judgment as to the actual yield of the county in bales. We have received replies from 98 per cent. of the area in cotton, comprising 626 of the 657 counties which we endeavor to hear from. The replies number 1,227, or an average of nearly two reports to each county. The following table shows, in relation to the size of the crop—first, the estimates sent from the counties, and second, additions of 8 per cent. for involuntary underestimates by correspondents—thus giving a probable total yield of 5,692,000 bales. An allowance of 100,000 bales is made for possible additions to the crop as it will be counted on September 1 from old cotton in the hands of planters. This by reason of last year's phenomenal yield and the fact that an advance in prices may attract the unsold cotton to market.

THE COTTON CROP OF 1883-84.

States.	*Cotton counties of over 500 acres*	*Number of counties reported*	*Number of replies received*	*Percentage of area reported*	*Weight of bales compared with last year.* 1882–83	*Weight of bales compared with last year.* 1883–84	*Pounds seed to pound of lint compared with last y'r.* 1882–83	*Pounds seed to pound of lint compared with last y'r.* 1883–84	*Yield by states as sent from 626 counties*	*Probable total yield 1883–84; 8 per cent. added gives*
North Carolina	63	63	138	100	465	453	3.13	3.21	380,000	389,000
South Carolina	32	32	88	100	457	451	3.09	3.12	415,000	448,000

Alabama	62	62	120	99	422	474	3.39	3.39	619,000	669,000
Mississippi	70	68	129	98	478	470	3.02	3.20	700,000	806,000
Louisiana	46	45	83	98	454	443	3.14	3.28	388,000	419,000
Texas	121	116	215	97	516	489	3.28	3.27	1,050,000	1,134,000
Arkansas	114	70	114	97	474	481	3.13	3.15	514,000	555,000
Tennessee	73	34	75	99	491	490	3.27	3.25	315,000	340,000
Virginia, Missouri and Indian Ter.	37	..	15	100	496	453	3.28	3.20	46,000	50,000
Summary	657	626	1,227	98	483	468	3.24	3.24	5,260,000	5,692,000

Decrease from total yield 1882, 18.1 per cent., or 1,259,000 bales.
Possible addition to crop on account of old cotton in hands of planters, 100,000 bales.

We have thus to give out BRADSTREET'S report of the cotton crop of 1883–84, after allowing for a general uniform underestimate by correspondents of 8 per cent., as shown by our experience since the spring of 1881. Having regard to the known severity of the drouth and the fact that the yield of 1882–83 was a phenomenal one, it is not thought that the decrease of 18.1 per cent. reported is in any wise improbable.

UNDERVALUATION OF IMPORTED MERCHANDISE.

The report of Mr. Martin, Chief of Special Customs Agents, has been the occasion of indignant comment among some importers and in some newspapers. Mr. Martin's charges were of a grave character. The remedies which he proposed were not acceptable to the commercial classes.

The Treasury Department for a series of years has kept a special confidential agent in Europe charged with the duty of informing himself as to the actual and the market value of all importations to this country, with a special view of discovering whether the practice of undervaluation, which caused so much excitement in New York some years ago, still continues. During the last year the Treasury has sent a new agent to this field, who has developed new energy, and whose secret reports to the department, none of which have been published, contain extraordinary statements as to frauds which, he believes, are constantly being committed upon the federal tariff laws. This agent is General Tichenor, who was appointed by Secretary Windom. He has the confidence of the Treasury Department and of a great many very influential men, especially in the west. General Tichenor is a man of high character, of unquestioned integrity, and an expert on the subject of valuations. His reports show that he has made a thorough study of the subject; has had, under special instructions, the aid of our consular officers at all commercial and manufacturing centers with experts in the great cities. His reports are based upon information of this sort. The result of his experience is briefly referred to in the report of the Chief of Special Customs Agents, Mr. Martin. The substance of this report is:

That undervaluations in many lines of importations are the rule and not the exception; that this fraudulent practice is so extensive and continuous that the effect of it is to nullify any tariff laws which may be enacted and to defeat one of the great objects of a protective tariff, which is protection to American labor; that the effect of it is to destroy any possible competition of American labor; that an additional result is that American importers have practically been compelled to retire from the field in many cases, and that the whole business of importing is now confined to foreigners, the majority of whom are non-residents in this country, who are represented only by resident agents; that, in order to evade this law, the system of importations has been changed; that Americans do not import directly from European manufacturers; that "the ring of importers"—this is the language which is used outside of official reports—is generally composed in great part of the European manufacturers themselves, who consign their goods to their own agents, and, keeping the secret of the cost of manufacture to themselves, making no sales of the same articles in Europe, are able, without danger of successful dispute, to establish their own prices in their invoices, and to thus defy the United States tariff laws.

This, in substance, is the grave charge made by the chief of customs agents, who adds that this fraudulent practice has increased to an alarming extent during the last year. This is a revival of the accusation made against the foreign importers in connection with the matter of kid gloves and silks some years ago.

General Tichenor, the special agent in Europe, has not confined his researches to mere statements, but has secured samples of goods in all important cases, which have been forwarded to the principal appraising officers. There seems to be a slight friction between the special agent officers in Washington and the customs officers at some of the great ports. The former maintain that the recommendations of the special European agent are not sufficiently considered, and that sometimes the samples with his suggestions do not reach the proper authorities.

It appears that the customs officers at New York at least think that the suggestions of the European special agent are overdrawn, and that, while there may be isolated cases of undervaluation, there is no reason to suppose that the fraud is very extensive or that it has increased during the last year. It is unfortunate for the service generally that there should be any such substantial issue of fact between the leading customs officers. One probable result of it will be that the Democratic house will make inquiry as to the facts. If the statements of Special Agent Martin are true, free traders and protectionists would make common cause on the subject of undervaluations.

The reply of the Treasury customs authorities to the denial of the accuracy of the report made by the chief of customs agents will be that the appraiser in New York is not in a position to know the facts the accuracy of which he disputes; that he passes upon matters before him, and upon invoices presented to him; that the gravamen of the charge, and of the fraud, is not that the goods vary from the invoices, or from quoted European prices, but that the invoices are essentially fraudulent in themselves—that they are so made that they furnish no basis for comparison, that there is intentionally no market value by which they can be tested; that the absence of market value is in itself the intent to defraud the customs law, which it is necessary to prove, and to prove which the New York Custom House cannot in the nature of things have any evidence, and of which only by the reports of the government agents in Europe, treasury and consular, can they obtain any knowledge.

The Secretary of the Treasury does not leave his chief of customs agents to stand alone in this matter. Judge Folger, in his report which has just been printed, has the following on the same subject:

If there be legislation on the tariff at this session, an improvement might be made in the provision regarding third-class or carpet wools, either by fixing one rate of duty for them, regardless of value, or by having a broader contrast between the higher and lower classes. Now the duty is two and a half or five cents a pound, according as the value of the wool is over or under twelve cents a pound; and where the market value is close to twelve cents, as it is now, the temptation is strong to undervalue the wool, so as to bring it in at the lower rate of duty.

In connection herewith it should be said that changes in the modes of business have made undervaluations more frequent and difficult of prevention. It is found that foreign manufacturers of or wholesale dealers in many classes of merchandise decline to sell or to furnish price-lists to American merchants. It turns out that those manufacturers or dealers have established business houses or agencies or special consignees in this country, to whom they make shipments exclusively. It is suspected—it might be said that it is found out—that in many cases the goods sent over to these representatives are invoiced below their actual value abroad. There is no risk in this of mercantile loss to the foreign consignor, as the interest is mutual of him and his representative; the latter pays not at the invoiced value, but accounts at the actual selling price, in which both have an interest. It is not easy for the government appraiser to learn, in all cases, the real market value abroad, for price-lists have been withheld and actual sales are supplanted by this process, and it is hard to maintain criminal or civil actions for fraud against the consignee, for it is not easy to prove that he had a hand in the fraudulent undervaluation. Legislation aimed at these practices is needed.

It is learned, moreover, that Judge Folger is prepared to maintain the accuracy of the conclusion which he has reached after investigations which extend over more than a year. In these investigations he has had the aid of the State Department. In anticipation of a call upon the department from Congress for information upon this subject, the Secretary of the Treasury has caused to be compiled a digest of the information which he has been collecting during the year. He will submit it upon the request of the proper authority. This information goes very much further than Special Agent Martin did in his report. It contains names, places and dates. It gives the names of the foreign manufacturers, the system and fact of undervaluations, the extent of the alleged frauds and the names of the firms in New York and elsewhere to whom these undervalued goods have been consigned. As a sample of the extraordinary information contained in the mass of reports before the Secretary the following may serve: The consuls in Switzerland, who have had the most skilled silk manufacturers in their employ, declare that one-half the profits on silk exported to the United States consists of undervaluations. Two of the experts who were employed were compelled to decline the service, as they found the undervaluations so extensive that they did not care to make reports against the manufacturers, who were their friends.

The undervaluations in aniline dyes are enormous. In one invoice of thirty-nine packages an undervaluation of thirty-five thousand francs was reported. The undervaluations in importations of carpet wools are reported at fully 100 per cent. The wools are invoiced as all costing less than 12 cents per pound, and as, consequently, entitled to entry at the rate of duty provided for that grade, while, in point of fact, there has not been a pound of wool of that kind sold in Europe for twelve months below 12 cents per pound. The tariff law fixes the duty on these wools at a certain rate "exclusive of charges." This phrase is construed to cover systematic undervaluations. For instance, one of the charges has sometimes been of 5 per cent. for selling the goods. This is a method of undervaluation. The information which the Secretary has in his possession will cause much excitement among the Ohio wool growers, and will be a revelation to such New York importers as may not be aware of the existence of a foreign importers' "ring."

However extensive these fraudulent undervaluations may be, the importing classes and business men generally will not agree with Chief Customs Agent Martin that the only way to cure the evils is to reenact the moiety law. It is needless to say that the New York merchants have not forgotten the jingle of Jayne's handcuffs, and that there would be an indignant protest from all commercial classes against a renewal of the odious inquisitorial processes which existed under the old moiety law. The Democrats as a party made the repeal of that law an issue in the Forty-fourth Congress, and there is no reason to believe that there has been any change in their views since that time.

THE PRESIDENT'S MESSAGE.

The President's message has been looked for with somewhat more than usual interest this year, in view of the probability—since become a fact—that the free-trade element of the opposition party would secure control of the House of Representatives. The message, while in no sense a striking production, yet sustains the President's reputation as a safe and capable administrator. The first part of the message is, as usual, taken up with an exposition of the chief points of interest in our international relations, which are shown to be, in the main, satisfactory. Our relations with most foreign countries have been disturbed by no incident calling for special comment. The question of assisted emigration from the British islands is noticed by the President, who thinks that a revision of our legislation relating thereto may be deemed advisable, in view of the ineffectual action of the British authorities in applying measures of relief. In regard to the prohibition by Germany of swine products from America, President Arthur states that he extended to the imperial government a friendly invitation to send experts to the United States to inquire whether the use of these products was dangerous to health, but that his invitation was declined. The subject of the restrictions burdening our trade with Cuba and Porto Rico has occupied the attention of the administration, and has been laid before the Spanish government for consideration. The United States are now participating in a revision of the tariffs of the Ottoman empire, and have assented to the application of a license tax to foreigners doing business in Turkey, but have opposed the oppressive storage tax upon petroleum entering the ports of that country. The fact is adverted to in the message that, pending the confirmation of a treaty between Mexico and the United States, the rights of our citizens in Mexico depend upon the domestic statutes of that republic, and stress is laid upon the manifest need of such a treaty as will secure a satisfactory adjustment of the relations between the two countries. The President expresses his conviction that the charges of abuses and frauds under the existing reciprocity treaty with Hawaii have been exaggerated, and he renews his suggestion of last year that the treaty be modified wherever its provisions have proved onerous to legitimate trade between the two countries. He is not disposed to favor the entire cessation of treaty relations with Hawaii. Respecting the alleged violation by Chinese officials of the law restricting immigration from that country, the President says that measures have been taken to ascertain the facts incident to the supposed infraction, and that it is believed that the government of China will coöperate with the United States in securing the faithful observance of the law. The message speaks with approval of the efforts made to establish the neutrality of the Congo valley, and suggests that it may be advisable for this country to coöperate with other commercial powers in promoting the rights of trade and residence there. The President repeats his suggestion of last year that, in view of the frequency of invitations from foreign governments to participate in social and scientific congresses for the discussion of matters of general concern, provision be made for the exercise of discretionary power by the Executive in appointing delegates to such convocations.

The points of most interest in the message are, of course, those in which the subjects of revenue and finance are touched upon. The President points out that while hitherto the surplus has been applied, as rapidly as it has accumulated, to the reduction of the national debt, and that, as a result, only a comparatively small amount of bonds now outstanding are redeemable at the pleasure of the government, namely the 3 per cents. amounting to about $305,000,000. The 4½ per cents. amounting to $250,000,000 and the 4 per cents. amounting to $737,000,000 are not payable until 1891 and 1907 respectively. If the surplus shall continue to be as large as the estimates of the Secretary of the Treasury now indicate ($60,000,000 for the next fiscal year), the 3 per cents. may be all redeemed several years before the 4½ per cents. can be called in. The President says that there are cogent reasons why the national indebtedness should not be thus rapidly extinguished, chief among which is the fact that only by excessive taxation is such rapidity attainable. While expressing the opinion that still further reductions than those provided for in the last tariff act may be wisely made, he does not, however, advise the adoption at the present session of Congress of any measures for a large diminution of the national revenues. The results of the legislation of the last session of Congress have not, he thinks, become sufficiently apparent to justify any radical revision or sweeping modifications of existing law. He suggests that, in the interval which must elapse before the effects of the tariff act of March last can be definitely ascertained, a portion at least of the surplus revenue be applied to the rehabilitation of the navy and to the providing of coast defenses for the protection of our harbors. This suggestion seems hardly wise in view of the past

perience of the country with river and harbor legislation, and of the temptation to extravagance which the possession of a surplus must always afford.

The President next takes up the subject of the national currency. He adverts to the fact that, of the (in round numbers) $350,000,000 of bonds now on deposit in the Treasury to support the national bank circulation, nearly $200,000,000 consist of 3 per cents, which are payable at the pleasure of the government, and likely to be called in within a few years, unless in the meantime the surplus revenue shall be diminished. The most effectual plan to prevent such a contraction of the currency as would result from an extensive retirement of these securities is, in the President's opinion, such a reduction of the revenues as to render them substantially commensurate with the expenses. Failing in this, it will become necessary either to substitute some other form of currency in place of the national bank notes or to make important changes in the laws by which their circulation is controlled. The latter course is wisely recommended as the preferable one. The President commends Secretary Folger's arguments against the acceptance of any other securities than the obligations of the government itself as a foundation for national bank circulation. The President particularizes two plans which have been proposed for averting the threatened contraction of the currency, either of which he considers feasible. The first of these contemplates the issuance of new bonds having many years to run, bearing a low rate of interest and exchangeable upon specified terms for those now outstanding. The other course, which President Arthur regards as the better one, is the enactment of a law repealing the tax on circulation, and permitting the banks to issue notes for an amount equal to 90 per cent. of the market value, instead of the face value of their deposited bonds, as at present. In regard to the trade dollars, the President recommends that provision be made for their reception by the Treasury and at the mints, as bullion, at a small percentage above the current market price of silver of like fineness.

The remainder of the message is devoted to considerations respecting a variety of matters, upon a few of which only have we space to touch. The President strongly insists upon the necessity of proceeding with the reconstruction of the navy. He also recommends the reduction of postage on local letters from two cents to one cent, taking the view that the change would result in a large increase of local business, which would render any deficiency that might occur in the revenues of the department only slight and temporary. The arguments in favor of government control of the telegraph do not find much favor with President Arthur. He thinks that, even admitting that the authority of the government in the premises is as ample as has ever been claimed for it, it would not be a wise use of that authority to purchase or assume control of existing telegraph lines or to construct others with a view of entering into general competition with private enterprise. While taking this view, however, the President avows his belief that the government should be authorized by law to exercise some sort of supervision over interstate telegraph communication, and recommends the adoption of some measure with that end in view. He also commends to the careful consideration of Congress the question how far the national government may lawfully interfere to prevent unjust and oppressive measures on the part of corporations controlling in whole or in part the facilities for the interstate carriage of persons and merchandise over the great railroads of the country. In regard to the Mormon question in Utah, the President has come to the conclusion that polygamy has become so strongly intrenched in the territory that it is profitless to attack it with any but the stoutest weapons which constitutional legislation can fashion. He favors the repeal of the act upon which the existing government depends, and the assumption by the national government of the entire political control of the territory. The President expresses satisfaction with the working of the civil-service law and declares his belief that the effects of the law have been thus far beneficial. He again urges upon the attention of Congress the need of providing by appropriate legislation for the settlement of disputed questions regarding the succession to the presidential office. This reiterated recommendation is seemingly needed by Congress. It is, indeed, remarkable, in view of the events of 1876–77, and the later experience to which President Arthur impressively alludes, when, in case of his own death, inability, removal or resignation, there existed no constitutional successor to the chief magistracy, that Congress has not before this provided against the possibility of an interregnum. All patriotic citizens will echo the President's hope that the national legislature will not longer postpone the performance of their too long neglected duty in this regard.

FOUR YEARS' FOREIGN TRADE.

The publication of the detailed report of the imports and exports of the United States for the fiscal year ended June 30 last, affords an opportunity to compare it with like exhibits for the three preceding years, and to observe the fluctuations in our foreign trade during the period covering the late expansion and contraction of domestic commerce. The following tables show values of exports and imports of merchandise annually, from 1879-'80 to 1882-'83, condensed from the Bureau of Statistics' exhibits:

EXPORTS OF MERCHANDISE, FOUR YEARS (000's OMITTED).

Domestic merchandise.	1882-83.	1881-82.	1880-81.	1879-80.
Agricultural implements	$3,883	$2,976	$2,400	$2,245
Animals, living	10,789	9,729	16,674	15,882
Beer, ale and porter	490	384	347	298
Breadstuffs and bread	208,040	182,670	270,332	288,036
Coal	4,241	3,692	2,831	2,058
Copper and manufactures	2,348	748	876	849
Cotton, unmanufactured	247,328	199,812	247,695	211,535
Cotton, manufactures	12,951	13,222	13,571	9,981
Drugs and chemicals	3,306	3,517	3,045	2,756
Fruits	3,005	1,750	4,439	2,090
Furs and skins	3,935	4,747	5,451	5,104
Hair and manufactures	474	307	337	257
Hats, caps and bonnets	206	275	283	221
Hemp and manufactures	800	735	1,186	1,272
Hops	5,616	1,456	2,016	2,573
India rubber & manufactures	569	510	401	306
Iron and manufactures	16,092	14,732	11,369	8,963
Steel and manufactures	3,072	2,818	2,798	3,642
Leather and manufactures	7,923	8,999	8,088	6,769
Manures	1,082	1,022	612	603
Marble and stone	541	614	629	652
Musical instruments	1,203	1,267	976	811
Naval stores	3,242	3,370	2,638	2,452
Oils, mineral and vegetable	46,141	53,279	43,073	41,370
Oil cake	6,061	6,302	6,284	6,259
Ordnance stores	1,376	909	829	777
Paper and stationery	1,589	1,618	1,347	1,183
Provisions	107,388	120,655	151,528	127,042
Quicksilver	1,020	959	1,124	1,360
Seeds	4,420	4,219	3,044	2,776
Sewing machines, etc	3,061	2,647	1,982	1,649
Spirits, distilled	1,982	1,989	3,247	3,027
Sugar and molasses	3,415	1,872	2,673	3,339
Tallow	3,248	4,015	6,800	7,689
Tobacco and manufactures	22,095	21,430	18,878	18,442
Turpentine, spirits of	4,366	3,798	2,414	2,132
Wood and manufactures	26,793	24,012	18,600	16,014
Wool and manufactures	388	445	350	288
Unenumerat'd, miscellaneous	24,094	18,023	22,703	20,934
Total val. exp'ts domes. mdse.	$804,223	$733,239	$883,925	$823,946
Foreign merchandise, free.				
Coffee	3,895	3,226	4,395	944
Fish	105	54	65	189
Hair	52	16	3	2
India rubber	1,290	464	271	4
Oils—volatile, etc	226	159	275	371
Tea	1,023	417	779	799
Dutiable merchandise.

Total val. free and dut. imp'ts.	$723,180	$724,639	$642,664	$667,954

The exports of domestic commodities are naturally of interest first. Even a casual glance at the figures given reveals that our sales to foreigners, while about $71,000,000 larger in 1882–83 than in the year before, are but $18,000,000 in excess of the average of the four years. The gain in domestic exports in the past fiscal year may be entirely accounted for by the increased exports of breadstuffs and unmanufactured cotton, which amounted together to about $73,000,000. The increase in domestic exports of about $60,000,000 from 1879–80 to 1880–81 may be accounted for by the gains in shipments of unmanufactured cotton and of provisions. In the latter year the highest point in foreign shipments was reached. The drop in the fiscal year 1881–82 amounted to about $150,000,000. The leading decreases in exports were (as compared with 1880–81) in round numbers: Breadstuffs $88,000,000; unmanufactured cotton $48,000,000; provisions $31,000,000, and living animals $7,000,000 less, an aggregate of $174,000,000 decreased sales. The noteworthy increased values in exports as compared with 1880–81 (the preceding year) were: Oils, $10,000,000; wood and manufactures, $6,000,000, and iron and steel and manufactures $3,000,000, in all $19,000,000 increased values, thus accounting for $155,000,000 net loss. The gains on minor exports reduce the last total given. On the basis of the value of exports, cotton still appears to be "king." The order of the ten leading shipments of domestic products during the fiscal year 1882–83 was:

Cotton & mfres	$260,279,000	Tobacco mfres	$22,095,000
Breadstuffs	208,040,000	Iron & steel mfres	19,164,000
Provisions	107,388,000	Animals, live	10,789,000
Oils	46,141,000	Leather & mfres	7,923,000
Wood mfres	26,793,000	Oil cake	6,061,000

The value of the above aggregates about $714,673,000, over seven-eighths of the total value of domestic shipments. The order was the same in 1881–82. In 1880–81 exports of breadstuffs ranked ahead of those of cotton and manufactures in point of value, exceeding them some $10,000,000. Tobacco took fifth place and wood sixth. The shipments of live animals in that year exceeded in value those of iron and steel by over $2,500,000. In 1879–80 cotton stood first in the order of value of shipments, tobacco and wood as last noted, as also live animals and iron and steel. The variation in values of leading exports has not been uniform. That of breadstuffs was greatest in 1879–80. It declined for two successive years, and then advanced again. The value of shipments of raw cotton was greatest in 1880–81, although almost exactly as much as in the past fiscal year. The decline in the export of provisions is well known to be due to foreign prohibition of importation, and dates, as shown, from the spring of 1881. The steady increase in the value of exports of "oils," nearly all of petroleum and its products, from 1879–80 to 1881–82 was to be expected. The decline since was due in part to a falling off in the shipments in the fall and winter of 1882, and to the depression in prices at the opening of the past fiscal year. Our shipments of wood and manufactures thereof has grown steadily from $16,014,000, in 1879–80, to $26,793,000 in 1882–83. Those of tobacco and manufactures have preserved a like course, though less rapid. The value of our shipments of iron has nearly doubled in four years, advancing from $8,963,000 in 1879–80 to $16,092,000 in 1882–83. Those of steel show a net decline, though larger in 1882–83 than in either of the two previous years. The value of steel shipments four years ago was $3,642,000, and in 1882–83 it was $3,072,000. The value of exports of live animals has dropped off 56 per cent. in four years, or from $15,882,000 to $10,789,000. Exports of leather and manufactures have averaged in value about $8,000,000 annually, and those of oil cake a trifle over $6,000,000 a year.

The increase in value of our re-export of foreign merchandise has been from $11,692,000 to $19,615,000 in four years, a gain of about two-thirds of the total in 1879–80. This is accounted for by a gain of about $3,000,000 in our shipments of coffee, about $1,000,000 each on india rubber and tea, $1,500,000 on foreign iron and steel exported from the United States and $500,000 on foreign breadstuffs received here and sold again abroad.

The table of imports shows no material variation in the total value of imports of articles entered free of duty within the past four years. We are buying $18,000,000 less of coffee than in 1879–80, $3,000,000 less of hides and $2,000,000 less of tea. The gain on purchases of India rubber as compared with 1879–80 is $6,000,000; raw silk $2,000,000; wood $2,000,000; sugar, rice, molasses, &c. (from Hawaii) $4,000,000, and on minor articles enough to offset the remainder of the loss shown. It is noteworthy that the Hawaiian Islands have doubled their exports to this country under the treaty in four years. The importations of dutiable merchandise declined from $459,652,000 in 1879–80 to $440,173,000 in the following twelve months, a loss of $19,479,000. The gain in the succeeding year was $74,887,000, and in 1882–83 it was about $1,500,000 greater than in the year before. The leading dutiable importations, as compared with the same, four years ago, rank:

	1882–83.	1879–80.
Sugar and molasses	$91,948,000	$84,615,000
Wool and manufactures	55,224,000	57,638,000
Iron and steel and manufactures	40,796,000	53,714,000
Cotton manufactures	36,853,000	29,920,000
Silk and manufactures	36,764,000	32,188,000
Flax and manufactures	19,737,000	19,908,000
Fruits	19,275,000	13,270,000
Tin and manufactures	17,811,000	17,286,000
Breadstuffs	15,220,000	8,462,000
Leather and manufactures	13,104,000	12,205,000
Jute and manufactures	12,666,000	7,931,000
Wine and spirits	12,308,000	7,726,000
Tobacco and manufactures	11,771,000	7,402,000
Wood and manufactures	10,295,000	6,650,000

In the fiscal year 1882–83 we sent abroad in value nearly one-half as much iron and steel and manufactures as we received from other countries, about one-third as much manufactured cotton, less than one-sixth as much fruit of all kinds, about fifteen times as much bread and breadstuffs, about one-half as much leather and manufactures, less than one-sixth as much wine and spirits as we imported, about twice as much tobacco and manufactures thereof, and about two and one-half times as much wood and manufactures of the same.

OCCASIONAL NOTES.

Our issue of two weeks ago contained remarks upon the business situation in Canada, which seem to have excited dissatisfaction in some quarters. The accuracy of our statements has been very confidently questioned. We do not see any reason to believe that our exposition of the state of affairs there was not substantially correct. The truth is that the notion that a country can tax itself into prosperity has had too ready an acceptance among the people of the Dominion, and some of the results are now becoming apparent. We are by no means alone in our belief that the feeling in business circles in Canada is not entirely sound and satisfactory. The Montreal *Shareholder*, for example, says, in an article on "Business Malaria," that "there seems to be an unhealthy condition of the financial and commercial atmosphere about these latitudes," and goes on to speak of various happenings which indicate any but the soundest condition of the commercial community. It is probable that the criticism of our Canadian friends is like much other criticism that obtains currency, based rather on a conception of what a well ordered and prosperous state of affairs should be, than on the appearance which the existing situation in the Dominion presents to those at a distance, who are unaffected by local interest.

It appears that the people of Canada are not merely angered at the shipping of "assisted" immigrants to their domain, but are apprehensive of an excess even of useful persons. The Trades and Labor Council of Toronto, in a memorial to the Minister of Immigration, say that there is not at present any public work of magnitude enough to give employment to the present surplus population of Canada. They declare that there are now many more artisans than can find work at living wages. The cost of the necessaries of life is increasing and the earning capacity of laborers decreasing. The

net increase of the population of Ontario by immigration at the five agencies in the ten months ending with October was 25,609, against 20,767 in the corresponding period of 1882. The total number of arrivals was 90,190, of which 56,675 went to the United States, against 91,884 in the corresponding period of 1882, of which 63,138 went to the United States.

The English journals have devoted some space to notices of the death of Lord Overstone, sometime Mr. Jones Loyd, who has just died at a very advanced age. Lord Overstone's reputation was essentially non-political and it is not strange that he should have passed out of public notice in his latter years. He enjoyed during his long life the reputation one of the clearest-minded financiers in England. He was constantly consulted by cabinet ministers upon the subject which he had made his special study, and was credited with the authorship of the Bank Charter act of 1844. In recognition of his services he was raised to the peerage in 1850. It has been said of Lord Overstone that there was nothing of the heroic about him, and that may perhaps be, but he, and such as he, may well stand for the representatives of a commercial country and of a commercial age. The work done by men like him, while less showy, is much more solid, enduring and widely beneficial than that of most politicians whose fame fills the popular ear.

A movement has been set on foot in the city of New York looking to the substitution of a system of propulsion by means of cables instead of the horses and locomotives by which cars are at present moved. Mayor Edson has appointed a commission vested with power to authorize the building of cable surface roads. There has also appeared the prospectus of the National Cable Company, an association which proposes to take contracts to construct street cable railways, and which claims the ownership of all the patents which have been successfully operated on the street railway cable system. The plan of propulsion which it is proposed to introduce is the same as that now used in Chicago and San Francisco. It consists of an endless wire rope placed in a tube below the surface of the ground, between the tracks of a railway, and kept in position by means of sheaves, upon and beneath which the rope is kept in motion by a stationary engine, the power being transmitted from the motor to the rope by means of grip or other suitable pulleys, and from the rope to the cars on the street by means of a gripping attachment fixed to a grip-car or dummy and connected by a thin bar which passes through a narrow slot in the upper side of the tube. It is claimed that when in operation the system presents no impediment to ordinary travel, that the car is more smoothly started than by horses and may be instantly stopped on any part of the road, that the danger from accidents is reduced and that there is a great saving in the cost of operation and in the wear and tear of the street.

A new exchange, under the title of the Electric, Manufacturing and Miscellaneous Stock Exchange, for dealing in all classes of corporate securities not at present listed on the other exchanges of New York, was opened for business on Tuesday of this week. It is modeled upon the Stock Exchange, and aims to offer a market for the securities named, such as that organization does for those of transportation and telegraph companies. It opens with a membership of 250, which is one-half of that to which it is limited, and a list of stocks numbering about 1,200. These include the postal telegraph, the telephone, electric light and gas stocks and those of a number of manufacturing companies. The exchange is an outgrowth of the smaller unincorporated one which for several years has offered the only means for dealing in such securities in New York, and is designed to do in a large way the work carried on by it. There can hardly be any question that an exchange of this character will find a wide field of usefulness in this direction. The constant tendency is to cast all industrial enterprises in the corporate form and, to render a "market" for the securities thus created indispensable.

The government geologist of Illinois reports that state now second in rank as a coal-producing state, having 36,000 square miles of coal fields, and that the mining industry has enabled the state to compete successfully with New England water powers in manufacturing. The product increased 400 per cent. from 1867 to 1880, when the census reported it to be 6,089,514 tons, but the state geologist thinks the "stripping" on the outcrops of the thinner seams, of which that report made no account, would carry the total up to 6,250,000 tons. The Rock Island county supply has been about exhausted and resort must be had to the counties further east and south for supplying that region. The Springfield deposit, as it is called, holds out better than any other. From Bloomington to Carlinville, along the Chicago and Alton railroad, coal has been found at every point where boring has been carried to the proper depth. There are seven shafts in operation on this seam within two miles of the state capital and about the same number in Sangamon county.

One of the outgrowths of the renewed efforts to gain a thorough knowledge of the diseases of domestic animals is the issue of a circular by S. A. Forbes, State entomologist of Illinois, to swine-breeders and farmers asking them to send him samples of parasites or organs affected with parasites, he having entered on a series of investigations of these pests. Another is a circular by J. B. Grinnell, of Iowa, showing what inroads have been made on trade by these diseases. He says there is an investment of over $1,000,000,000 in 41,171,000 cattle, and that the loss on exportations in the past two years, as compared with the two preceding years, was over $11,000,000. There was a decrease of $2,191,190 in the exports of fresh beef, and of $35,679,093 in pork products.

A new, and what promises to be an important, manufacturing industry has been established in San Francisco. An incorporation of the Union Iron Works has been perfected, and extensive premises are being built on the water front in South San Francisco. Five hundred thousand dollars have been already expended, and one million additional will be disbursed in building and machinery. A hydraulic dock forms part of the scheme of operations. Iron and steel ships will be constructed, and every kind of machinery in steel and iron turned out. This is one of several developments of existing manufacturing enterprises in the iron trade. It will employ a large number of hands. The Clipper Gap Iron Company is also enlarging its operations in the mining and reduction of ore.

The oil refinery for handling whale oil is approaching completion in San Francisco. The greater part of this season's catch will be refined at these works. Heretofore the oil was shipped to the east in an impure state, and after being refined was distributed throughout the country, the Pacific coast buying back what it required. Henceforward San Francisco will be the point of distribution. This is an important industrial change. The whaling center of the world, by all appearances, will be transferred from New Bedford to San Francisco. This change of base is being rapidly made, owing to the employment of steam in whaling and to the proximity of San Francisco to the whaling grounds.

SPECIAL CORRESPONDENCE.

GRAIN, PETROLEUM AND STOCKS AT BERLIN.

Berlin, November 19.—The improvement in the grain trade which took place at the beginning of the second week of November in the German as well as other principal markets of Europe was of very short duration. The very next day the demand slackened, business became slow again, so that most markets, Berlin among the number, gradually lost the greater part of the rise in prices gained on the 8th inst. As the impulse to the rise in prices and business in Germany and almost all over Europe had been given by the United States, so the decrease there was the principal cause of the same here. I say the principal cause advisedly. Besides the regular dispatches of visible supplies in the principal stores of the North American union, the more or less reliable reports about the stores in Odessa, Therson, Riga, Cronstadt, Liban, and other ports in the north and south of Russia, exercise a considerable influence upon the European grain markets, and as do these, so of course do the reports of the shipments across the Atlantic, Mediterranean and Baltic, to say nothing of the shipping from India, the Danubian countries and the railway transports from Hungary. Add to this the stocks already massed from different exporting countries. Whichever of these important points the speculator or consumer might take into consideration, each of them—setting aside the remains of last year's harvest—is sufficient to prove that for some time to come there is no fear of any want, but there will be abundance. Why therefore should the consumer—baker and miller—hasten to purchase or the speculator to enter into any distant speculations? No wonder prices, though they did not fall to the level of the first week of November, lost the better part of what they had gained during the late rise—wheat, for instance, two-thirds. Whether this depressed state of affairs will last long no one can say with certainty. It will depend greatly upon American speculation. Fluctuation in prices will depend a good deal though not entirely upon the bulls or bears having the upper hand in America. Russia, next to America, is the principal corn purveyor of Europe. Germany especially gets from her eastern neighbor large quantities of rye, which, as you know, plays a great rôle with us as an article of food. This year we are still more dependent upon Russia for it than usual, as our rye crop was bad and cannot be used without being mixed with the better Russian rye.

The peculiar state of affairs in Russia has been the reason that we, as well as the rest of Europe, have been supplied with all sorts of grain from there quicker and in greater quantities than usual. The barbarous persecution of the Jews has induced a good many prosperous, enterprising Jews to turn their backs on that inhospitable country, and among them many who used to act as grain brokers. The great Russian grain growers this year were therefore obliged to send their grain direct to the export harbors themselves. Inexperienced as they were, however, in business, they were charged such high prices for warehousing the grain and money advances upon it that they preferred to sell their wares quicker and cheaper to the importing countries than they would otherwise have done. This explains the inundation of every variety of Russian grain at comparatively low rates. It is difficult to say whether this abnormal state of things will last long. And quite as difficult, considering inefficient Russian statistics, what quantities for exportation are still in the first hand, and whether the report is well founded that a considerable part of the surplus must be sent to the west and middle of Russia, which had a bad harvest, especially of rye.

The real yield in the rest of Europe, too, is not at all sufficiently ascertained, as all the figures hitherto quoted are in reality founded entirely upon more or less exact estimates. Now, every one knows in all such estimates self-interest plays a great rôle, often contrasting strongly with reality. What complaints, for instance, were uttered in Prussia at the bad results of the harvest, and afterwards, it seems, the result is not so bad as they tried to make the world believe at first. The Prussian farming associations have just published the resumé of their inquiries in the month of October regarding the results of the principal cereals during this year, and a comparison with the definite results of 1882 and an estimate of a middling harvest. According to this estimate the harvest in Prussia was as follows:

	1883.	1882.	*Middling harvest.*
	Per hectoliter.		
	Kilogs.	*Kilogs.*	*Kilogs.*
Winter wheat	1,322	1,328	1,482
Winter rye	1,161	987	1,243
Summer barley	1,304	1,238	1,481
Oats	1,117	1,083	1,350
Peas	874	756	1,078
Field beans	980	1,361	1,423
Vetches	851	726	1,086
Buckwheat	966	559	949
Lupines	869	689	969
Potatoes	10,322	6,208	10,342
Winter rapeseed	913	983	1,148
Hops	401	415	618
Clover hay	2,031	2,423	3,347
Meadow hay	2,427	2,107	3,012

It is true this list gives the comparison of the estimate of 1883, with the definite results of last year. The definite result of this year can only be given next February, and might possibly be less favorable; but still the October estimates drawn up by reliable authorities prove that the former reports were too pessimistic.

Therefore, after all we have stated, we may say that, though for some time to come there is no reason for any considerable rise in the price of grain as all demands can be satisfied, there is no call for any considerable decrease, as this year's harvest, though appearing to be better than at first supposed, is not a good nor even a middling one.

For some time petroleum has been firm in the market here. Business is good and prices are rising. It will be of interest to you to hear that the Berlin Association for the Furtherance of Industry has offered a premium of 1,500 marks ($375) for the best analysis of raw petroleum found in Germany as much for its chemical and physical qualities as for the methods of producing from crude oil useful articles for trade, as lamp-oil, etc. The reason for offering the premium, lately passed at a meeting of the association, was advocated as follows: "Though the production of petroleum in Germany is as yet comparatively small, there is hope of increasing it by a more thorough knowledge of places where to find it and the introduction of a better method of extracting it. The want of a good method of producing good oil from the raw material, so that the German produce hitherto cannot compete with others, has as yet prevented the development of German petroleum industry."

The Stock Exchange in Berlin, in common with other German exchanges, continued to fall since I wrote on the 8th inst., especially during the first two days of last week. That there was no real cause for this is proved by the fact that from the middle to the end of the week prices rose as quickly as they had before fallen, without any change in the situation of business during these few days. The same reasons which had been given at the beginning of the falling were still existing in full vigor at the close of the same last Wednesday. The bad state of the market for mining products in the Rhenish-Westphalian districts, as well as those of the Saar and Moselle, which had the greatest influence upon the German exchanges, still holds on. And yet these shares regained not only what they had lost, but partly even rose higher than they had been before the panic, and it is the same with other leading stocks. People afterwards tried to explain the sudden change by the improvement in the political situation. The danger of a Franco-Chinese war—if altogether a sufficient reason for a considerable fall in the price of German stocks—has remained the same the last few days, nay, even become more imminent than two or three weeks ago. The exceedingly gracious receptions accorded to Monsieur de Giers, the Russian Minister for Foreign Affairs, by our court when he passed through Berlin and during his visit to Prince Bismarck in Friedrichsruh is no more a real reason for the late rise than the endless rumors of an offensive war planned by either Russia or Germany are sufficient ground for the panic which preceded it. More alarming than these fluctuations might be the numerous cases of bankruptcy, which in the whole empire amounted to 380 in October, in comparison to 260 in September. The month of October in the three previous years likewise showed fewer bankruptcies.

LETTERS TO THE EDITOR.

CORPORATE MONOPOLY.

To the Editor of BRADSTREET'S.

SIR—I was greatly interested in the letter of your Berlin correspondent on the subject of the proposed purchase, by the Prussian government, of the railroads still remaining in private hands. One cannot accuse the Prussian government of communistic tendencies, neither can any one allege that it is unmindful of the rights of property. Prussia is the most conservative government in Europe to-day, and yet its policy is precisely what the monopoly press of this country characterize as communistic and denounce as an invasion of private rights. For example: The government of Prussia regulates the freights and fares on all corporate railroads within the realm just as fully and effectually as it regulates the transportation charges on government railroads. The corporations are not above the government in Prussia. They do not control the legislature and make laws to suit themselves. Their tariff of charges must be submitted to the government for approval, and the government takes care that the public are protected.

The right of the government to regulate freights and fares in this country is stoutly contested by the railroad corporations, Governor Stanford, of California, having made a very elaborate argument against state intervention in railroad affairs in his reply to the New York Board of Trade a few years ago, in which he contended that the true principle of railroad management was to "charge what the traffic would bear;" in other words, that transportation charges should be regulated, not by the service performed, but by the market price at its destination of the commodity carried.

This monstrous proposition would not be tolerated in Prussia, nor would it anywhere else that I know of except in this monopoly-ridden republic. It is, however, the rule under which the railroads of this country are operated, to the great and lasting detriment of the producing classes and the aggrandizement of the handful of men who control railroad enterprise. And it is by this arbitrary process of capturing the profits on production and trade that the foundations have been laid of so many colossal fortunes. Indeed, this must be self-evident, when it is remembered that it was testified on behalf of the railroads, before the Senate Committee on Labor in New York, that the gross annual earnings of the railroads of the country about equaled the aggregate selling value of their shares. When to these normal receipts are added the value of watered stock, it is easy to understand the methods by which millions of dollars are added to the annual hoardings of railroad magnates. And it is likewise easy to understand the rationale of the political and social movement of which Mr. John Swinton has placed himself at the head.

Does any one suppose that the Prussian government would sanction such a mandate as that which recently issued from the railroads freight bureau, that from and after November 20 five cents per one hundred pounds would be added to the freight between Chicago and New York? This was simply taking advantage of the closing of water transportation for the winter season to compel producers and consumers to pay tribute to the railroad monopolists. To question the right of these corporations to do just as they please is to subject one to the imputation of communism. Well, so be it. If to do right and prevent wrong doing is communistic, men of probity and honor will not wince under the charge. They will rather glory in it, and work all the more strenuously to curb corporate greed, which is running riot and threatens the foundations of social order.

Now, I do not seek to discuss this issue further in this place, although BRADSTREET'S, "a journal of trade, finance, and public economy," is just the place in which it should be discussed. My purpose, however, is served by indicating a line of investigation which might be profitably pursued, but which the majority of men engaged in the active business of life have not leisure or opportunity to prosecute on their own account.

Before concluding, however, I desire to enter my protest against the pooling arrangement between the overland railroads by which the Northern Pacific Company is paid $500,000 yearly out of the earnings of the Central Pacific for leaving the latter in undisputed control of the California trade. This appears to me to be an immoral, if it be not an illegal, bargain. Both corporations have been liberally endowed by the people, and at the first opportunity, when opposition becomes possible to the advantage of the public, they "pool their issues," conspiring to deprive the people—their creator and benefactor—of any benefit that might accrue even from a choice of transportation routes. The Northern Pacific has closed its San Francisco office and left the field to its rival, who can dictate its own terms to the merchants and producers of California, and through them to the eastern states.

What right have these corporations to conspire to establish the most exacting monopoly in the world? In Prussia they would be brought up with a round turn; but here they are omnipotent. If any one cited them before the District Court their judicial tools would rule that interference with railroad corporations is a violation of the Fourteenth Amendment, or some equally absurd subterfuge for finding in their favor, as was done in the recent California tax suits.

In Prussia, the government controls the railroads; and what is more, it will buy them out compulsorily, fixing its own price. That is the gist of your Berlin correspondent's letter, and it is in accord with current news. Is it wrong, therefore, to infer that a policy which the conservative forces of the Prussian monarchy declare essential to the well-being and prosperity of the people, cannot be revolutionary and communistic in the United States? We are going dead against the enlightened experience of the world and setting corporations above the state. This is wrong. Let Congress act in the premises, and act promptly, or the day of a pacific adjustment may have passed. There are gathering forces in this republic which will redress these glaring abuses without wasting sympathy upon the confederated despoilers of the country, who have become unbearably insolent in their exactions, and who resort to every subterfuge, not stopping short of perjury, to evade even the payment of taxes to the commonwealth. This is true of "Railroad Kings" in every state. There should be no difficulty in dealing with railroads built wholly or in part by public bounty. The corporations have not kept faith with the people, and the people should resume their own. This will ultimately be the short cut through corporate monopoly. Yours, etc., C.

San Francisco, November 26, 1883.

P. S. Since writing the foregoing I perceive from the Prussian budget that the finance minister reports a surplus of 29,000,000 marks, mainly derived from the railroads. Eleven million marks of this surplus were applied to the reduction of the railroad debt. This is a suggestive item, unless it be claimed that our fiscal, industrial and economic methods are perfect. This, BRADSTREET'S knows full well, is not the case. C.

SOME POINTS AND SUGGESTIONS ON THE SILVER CURRENCY QUESTION.

To the Editor of BRADSTREET'S.

SIR—As the problems involved in the retirement of bank currency and the continued coinage of silver dollars are now before the country, I send you the following communication embodying thoughts relative to the probable effect the bullion certificate system, as suggested in my recent pamphlet, might have in steadying the price of silver, as well as in permanently enhancing its value.

It will be remembered that my proposition is to do away with all coinage of either silver or gold not actually demanded by trade, and to substitute bullion certificates based on weights of metal equivalent to the various coins, provision being made for permanently holding both bars and coin on deposit at the principal trade centers, in order to conveniently redeem in either bars or coin any certificates that may be presented. I propose that the amount of silver represented in each silver certificate be determined by the average price of silver for the year preceding the issuing of the certificate, and to make their reception voluntary at any other than their actual market value.

Let us first consider the relative value of gold and silver under past conditions.

In the year 189 B. C. the Romans coincided with the Greeks in estimating one ounce of gold to be worth ten times as much as one ounce of silver. In England the relative value of the two metals at the middle of the thirteenth century was 9.261 to 1. At later periods their relative value stood as follows: In 1344 it took 12.475 ounces of silver to equal the value of one ounce of gold; in 1543, 12; 1546, 10; 1547, 11.400; 1604, 12.109; 1626, 13.431; 1666, 14.485; 1717, 15.209; 1816, 15.209; 1849, 15,632; 1852, 15.371; 1863, 15.69.

These figures represent the effect of the sum of all the influences at the time existing, which tended either to raise, depress or keep stationary the relative value of these two metals. The general results are easily deducible: sometimes silver has risen in value, sometimes it has fallen, sometimes it has remained stationary, but as a whole, silver has fallen in value until now it takes fifteen ounces instead of ten, to equal the value of an ounce of gold.

While these facts are obvious, it is equally clear that in the race for position each metal has had to depend upon its own natural or intrinsic merits, its individual power to suit the wants and purposes of mankind, by virtue of peculiar characteristics, better adapting one or the other metal to do the work required by the circumstances and conditions of the time and place. Among nations possessing little accumulated wealth, as India and the Eastern nations, silver may naturally be preferred, the ounce of silver representing value enough to suit the people's needs; but the modern Western nations need a metal one ounce of which will represent much greater value, and this want is met in gold.

Each metal therefore appeals with varying force to different peoples when used merely for purposes of coinage. In the arts their appeal for recognition and use depends upon a still greater variety of peculiar characteristics; their beauty, color, weight, oxydizability, etc., as well as value, affect their use in varying proportions.

Of the total amount of gold and silver supposed to have been mined and in existence, according to Jacobs, one-quarter is used in domestic manufacture. The Director of the Mint estimates the annual consumption of silver for manufacturing purposes within the United States at $5,000,000, against a product of over $40,000,000, and the annnal consumption of gold bullion for similar purposes at $10,000,000, against a product of nearly $39,000,000.

A larger proportion of gold, estimated by value, enters into domestic consumption, but estimated by weight silver is used ten times as freely as gold. So far as these metals depend for their value on their adaptability to domestic uses they never can be placed on a par with each other, the peculiarities of each will make the one better adapted to many purposes than the other, and the importance of these uses will influence the demand for each metal in differing degrees. But if we eliminate from our problem the proportion of each metal used in the arts we have about 75 per cent. or three-quarters of the bullion value of both metals susceptible to influences which spring from their adaptability to meet the wants of different communities as mediums or instruments of exchange in the form of coins and bars.

If 75 per cent. of the total product of the world's bullion goes to make money for the nations, then on this proportion of the whole we can estimate with approximate precision the effect certain peculiarities of each have had in the past, and are likely to have in the future, in determining their relative value. We can see that during the last eighteen hundred years the greater bulk and the greater weight of a dollar's worth of silver has made gold the greater favorite. With an ounce of silver in his pocket, the merchant has carried with him the representative of only a small amount of property of any kind, while with an ounce of gold he has carried the power to purchase from fifteen to twenty times as much. Where the object is to convey small portions of the world's wealth from one man to another, as among the laboring classes and poorer peoples, silver has answered every purpose and is often more desirable because the pieces of silver representing small values are of sufficient size to prevent loss, and because of their additional size their denominations are more readily recognized. But where the object has been to enable men to transport or to hold larger sections of the world's property, gold has been found to be much more desirable, and therefore has been preferred.

In past times when bills of exchange and the systems by which debts are made to cancel debts were less perfect than now, and whenever trade has not been evenly balanced the transportation of the medium of exchange (silver and gold) has been a necessity, and the weight and bulk of the paying medium has been an important consideration in all transactions. The transportation of bullion is less a necessity now than formerly, yet even now it is an important factor, and in some years millions of bullion traverse the broad oceans, now going in one direction and then returning, to say nothing of domestic transportation within the jurisdiction of each nationality. At the present time and in these United States if a man wished to purchase any article worth say three hundred dollars, and was obliged to pay in bullion and to transport it some distance, his choice between gold and silver would be determined in favor of gold by the fact that three hundred dollars in gold would weigh only one pound, and would occupy less than two cubic inches of space, while if he made the same payment in silver bullion it would weigh twenty-five pounds, and would occupy fifty-four cubic inches of space.

The metal best adapted for the work required, the one most easily handled and involving the least expense is the one always preferred. It is the law that determines choice and use, and is as invariable and may as surely be relied upon as the fact that water, under the impulse of gravity, invariably descends and seeks its easiest pathway to the sea. If, therefore, the system of keeping gold and silver on deposit in a few safe and convenient places is substituted for the present and past systems, which require and always have required transportation at the risk of loss, with certain expense and trouble, one metal will be as valuable as the other for payment, because ownership of either metal will pass from one man to another, whatever may be their distances from each other or from the centers of deposit, in precisely the same way and with the same facility, ease and lightness of expense. When, therefore, people become accustomed to the use of these certificates, and familiar with their value and great convenience, silver bullion will gradually and steadily increase in value. Apart from production, three-quarters of the influences which now determine the relative value of gold and silver are those which spring from their use or non-use as mediums of exchange. If these influences, by virtue of modern conveniences, are now made to work as favorably for one metal as the other, who shall say what the final value of silver shall be? During the past centuries silver has been but in moderate demand. For the reasons already stated, its employment has been mostly confined to payments of small value, and the volume of silver in circulation has been due to the number of these small transactions. If, therefore, you greatly facilitate its use by making heavy payments with it light, easy and desirable, the demand for it would be proportionatefy increased, its market value would become more steady and our mining product more readily absorbed.

When other nations adopt a similar system, for it is equally desirable the world over, the fluctuations of silver bullion will be unappreciable.

Is silver desirable as an additional medium of exchange? That money of some kind in addition to gold is required by trade seems to be quite universally conceded. We have large quantities of legal tenders as well as bank notes in actual circulation, and the retirement of only one form of our currency as the result of the natural and inevitable consequence of paying off our national debt, creates grave appehension, and Congress is called upon to suggest a remedy against a "contraction of our paper money," assuming its disappearance to be an evil. Our national controllor hastens to the rescue with the suggestion that it is a possible thing to buy up foreign debts, failing a sufficient quantity of our own, and with these foreign bonds secure future issues of new paper money.

To make bonded debts, however certain may seem the prospect of their payment, the foundation of a nation's currency is of doubtful expediency, and its certain effect is to put all debts at a premium, to make easier the floating of any and every bonded debt, to make its contraction a greater temptation, and the ultimate repudiation of many of them a pre-determined result.

If our business prosperity really requires some kind of an issue of money, in addition to gold money, to fill the vacuum made by the retiring of bank bills and greenbacks, are not silver certificates as well adapted as anything for this purpose, and is not silver bullion at a fair and honest valuation as good a security as somebody's bond?

When, by reason of great and exceptional changes which would alone, after the certificates were once in extensive circulation, affect their exchangeable value, the price of silver bullion materially advances or declines, the certificates can be changed at any of the sub-treasuries so as to represent greater or less weight of metal, at a comparatively small cost in either time or trouble, while to replace the same amount of coins with new ones would be very expensive.

Would the liability of the silver certificates to variation in value be an insuperable objection to their reception and circulation? A reference to our own financial history will throw some light on this question and help to elucidate our problem.

The competition of trade has always predisposed men to receive and to retain in circulation money of inferior value. The trade dollar was never designed for circulation in this country, but was coined to supply as well as to stimulate a foreign demand for the products of our silver mines. The government never favored its circulation here. It was not when issued a legal tender, and its value has been subject to all the fluctuations of bullion silver; yet it was received in trade, and for years passed current in New York city as well as at many other places at par. In the city of Washington, D. C., it circulated for a long time at 90 cents. The bills of the old state banks always sold at a discount a few miles away from home, and it was a custom with manufacturers to buy them at a discount and to pay them out to their employés at par.

The fact that the trade dollars passed in the District of Columbia at only 90 cents, while in New York they were received at par, is a remarkably good illustration of the fact that the people in their own interest sometimes determine fixed values for themselves; no matter what the quoted value of fine silver bars might have been—the trade dollar was worth at New York city 100 cents, at Washington it was worth only 90 cents.

The proposed silver certificates issued at the average market rate of silver during the preceding year might vary in value slightly; but the variations could not possibly equal the discount on the old bank bills or the variation in value of the trade dollars, and we may be assured that merchants and dealers will be equally glad to receive them. To illustrate, take a merchant who has an opportunity of selling a quantity of merchandise if he will take his pay in silver certificates. There enters into the problem determining his profits the liability of a decline in the value of his certificates, but this rests upon the remote chance of the decline in silver bullion being sufficient to affect the certificates' circulating value. If it decline enough for that he still has the opportunity of holding them for a subsequent rise, which may not only equal the fall but exceed it, and then he actually makes a profit on the money itself; or if he be compelled to pay them out at their market value to some creditor, he still in all probability would have made a profit on the sale of the merchandise which would secure him from loss and make him financially better off by reason of the transaction.

It might be thought best to make the certificates redeemable by returning to the depositor such amount of silver as would, according to the valuation already indicated, be equal to the number of gold dollars expressed on the certificates. This would throw all the loss, if any, on the government, but it would also secure to the government the profit accruing from the permanent rise of silver, and as the government would in any event retain a large amount of silver because of the permanent loss of many certificates, it would be morally certain of receiving a handsome profit.

But without any such provision as this, there will be arrayed on the side of the silver certificates and tending to keep their value steady the important influences springing from the facts—first, that the value of the bullion represented in each certificate has been fairly determined; and, second, the universal disposition of the people when any kind of money is once received into circulation to maintain its circulation value at a steady price, or at least to permit no slight reason to elevate or depress its exchangeable value.

Add to these influences the effect springing from the absorption of silver for the purpose of making

large as well as small payments, and the result must certainly be not only to maintain but slowly and surely raise the value of silver bullion in all the markets of the world. If this proves to be the case, a ratio of value by act of Congress would be only an impediment to its appreciation, and therefore very undesirable.

The silver mines of the United States yield nearly one-half of all the silver bullion produced; its increased value as an incidental result of the system is therefore of some national importance.

Gold and silver are and always have been the natural and the safest representatives of wealth, and to facilitate the holding and the use of these metals by making it an easy matter for citizens to receive and to pass them both in payment is the peculiar duty and prerogative of the government. Congress can properly declare or select one or the other to be the legal tender or standard of value, but the permanent ratio of value between the two metals can better be determined by the laws of trade, which readily mold and conform all values to new conditions.

The really true principle of coinage should be the creation of pieces of metal of a definite weight and fineness, with all the denominations having decimal relations with each other. Then buy and sell merchandise for so much weight of gold, or so much weight of silver, and when payment is made count the weight. Yours, etc. I. W. SYLVESTER.

New York Assay Office, November 30.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

The word "raise," used in regard to money to be got by subscription, means "collect," according to the decision of the Massachusetts Supreme Court in the recent case of Bates College vs. Bates.

The assignee of a note which recites that it is for the purchase money of land cannot be affected by an equity of the payor growing out of a consideration in addition to that expressed, and of which the assignee had no notice, according to the decision of the Kentucky Superior Court in the case of Ambrose et al. vs. Tabb et al., decided November 28.

A complaint on a writing signed by the defendant which did not allege that the writing was executed or delivered as a contract, was held bad on demurrer by the Supreme Court of Indiana, in the case of Elliott et al. vs. Champ, decided on November 24. The court said that signing alone by one party, without detivery to or acceptance by the other, was not an execution of an agreement.

The doctrine was recently reaffirmed by the Supreme Court of the United States that the rule of law of a state, as announced by its highest courts at the time railroad bonds were issued, will be held to govern in favor of innocent holders, notwithstanding later decisions of such courts announce a different rule. County of Green vs. Conness, decided at the present term.

In the case of Fordyce vs. Nelson, decided on November 26, the Supreme Court of Indiana held that notes made payable in Missouri and which were commercial paper under the laws of that state would be deemed to be commercial paper in Indiana, and that defenses by the maker on such notes would not affect them in the hands of a bona fide holder who acquired them before maturity and for value.

In a will which was recently before the Chancery Division of the High Court of Justice (England) for construction, the testatrix left "one-half of the money of which I am possessed" to one sister, and "the remainder" to be divided equally between two other sisters. Kay, J., held that the word "money" was used by the testatrix in a popular sense, and that all her personal property passed by the gift. In re Cadogan, decided November 10.

Where a contract is made by an agent without disclosing his principal, and the other contracting party afterward discovers the principal, he may waive his right to look to the agent and resort to the principal, and in such a case parol evidence is admissible to show who the principal was, even when the contract is in writing. Borcheling vs. Katz, decided recently by the New Jersey Court of Chancery.

Under an act providing that all actions against a city to recover taxes which have been illegally or erroneously collected shall be prosecuted within six months after the cause of action arose the statute begins to run the instant the payment is made, regardless of the time when the discovery may be made that the assessment was illegal. So held by the Kentucky Superior Court in the case of The City of Covington vs. Hoadley, decided on November 23.

A description of "all the stock, fixtures, goods and chattels of every name and kind," in a designated store, is specific enough to identify the property intended to be covered, according to the decision of the New Jersey Court of Chancery in the recently decided case of Shaw vs. Glen. The court held in the same case that an assignee for the benefit of creditors can take no exception to the validity of a chattel mortgage given by his assignor on the ground that it was not filed in the county where the mortgagor actually resided.

Strong ground was taken by the Supreme Court of Georgia against the validity of contracts for futures in the case of Cunningham vs. The National Bank of Augusta, decided on November 27. The court held in that case that contracts for the purchase and sale of cotton futures are gaming contracts, that they are immoral, illegal and contrary to public policy, and that all evidences of debt executed on such consideration are void in the hands of any person, even though it be a bona fide purchaser before maturity and without notice.

A clause in a policy of fire insurance upon the goods of partners provided that the policy should be void if, without the written consent of the company, the property should be sold. Afterwards one of the partners sold his share to the other, taking back a mortgage on the same goods. Upon an action for recovery upon the policy, the Supreme Judicial Court of Massachusetts held that the condition in the policy was not broken by the sale by one partner to another. Powers et al vs. The Guardian Fire & Life Insurance Company, decided November 30.

The Supreme Court of South Carolina in the recent case of Bell et al. vs. Bell et al. laid down the following principles as governing the application of payments: 1. A debter when he makes a payment has the right to direct and control the application. 2. The creditor may make the application in case the debtor has not done so. 3. If neither party makes the application then it devolves on the court, and in that case application will be made proportionately to the demands held by him who receives the money, or if one demand be less secured than the others the application will be made to it in the first instance.

The *Reporter* contains a note of the case of Horne vs. Boston & Maine Railroad Company, decided recently by the United States Circuit Court for the District of New Hampshire, in which it was held that a railway corporation, incorporated in the several states through which it runs, is, by a fiction of the law, for all purposes of jurisdiction a citizen of each of the states, and that it cannot remove a cause to the federal courts on the ground of its citizenship in the other states. This decision was in substantial affirmance of an earlier opinion of the Supreme Court of New Hampshire in the same case.

BUSINESS NOTES.

The St. Paul *Pioneer Press* says an excellent opportunity for the investment of Minneapolis capital is offered in the timber regions of Northern Mexico. The soft pine resembles that of Oregon. Land can be bought at very low prices, and is conveniently located for the transportation of lumber.

There were 215 failures in the United Kingdom reported to *Kemp's Commercial Gazette* (London) for the week ending November 21, against 235 and 247 in like weeks respectively in 1882 and 1881. Of these England and Wales had 191, against 206 and 229; Scotland had 20, against 22 and 11; and Ireland 4, against 7 and 7 in like weeks of 1882 and 1881.

The season has been an uncommonly disastrous one for lake navigation. One hundred vessels and 200 lives have been lost, the property destroyed being worth $3,000,000. Over $1,000,000 worth of property, or more than the aggregate of 1881 and 1882, was lost in the storm of two weeks' duration in November. The insurance companies have been losers not only by tempest but by the close competition in rates. It is thought that there will be a balance of $950,000 against them on the season's operations.

The Dominion government, in order to increase the trade relations between Brazil and Canada, has offered to reduce the duty on sugar coming from Brazil 10 per cent. if the Brazilian government will lessen the duty on Canadian fish and lumber. Negotiations are also in progress looking to the increase of commercial relations between Cuba, Jamaica and Canada. The reason given for the delay in the latter countries in proceeding to an arrangement is that each has a treasury deficit, and that any reduction of revenue in the removal of duties will increase it.

A report read at the National Butter, Cheese and Egg Association at Cincinnati stated that the total value of butter, cheese, eggs and poultry marketed in the United States in 1883 amounted to more than $600,000,000. The value of milk and cream sold, not manufactured into butter and cheese, was over $100,000,000. The values of the receipts at New York city were: For butter, $22,600,000; cheese, $16,000,000; poultry, $4,300,000; eggs, $10,000,000. Invitations for the holding of the convention next year have been received from St. Louis and Cleveland.

The San Francisco *Commercial Herald* says the raisin crop for this year will not exceed 80,000 boxes, and perhaps not 70,000, much less than had been expected. The number of boxes packed during the past few years is as follows:

1876	40,000	1880	70,000
1877	25,000	1881	95,000
1878	70,000	1882	100,000
1879	72,000		

The shortage in imports this year is given at 100,000 boxes of Malagas and 400,000 boxes of Valencias. The consumption of the United States is said to vary from 1,500,000 to 2,000,000 boxes a year. It looks, therefore, as if raisins would be higher.

The British labor market, as reported by the London *Labour News* November 24, was still disturbed. The coal miners in Staffordshire, Yorkshire, Derbyshire and Wales had given notice to stop work on December 1 if wages were not increased 10 to 15 per cent. Higher wages were demanded in some of the iron districts. Ship-building and marine engineering trades were quite active. The Sunderland engineers' strike continued. Workmen were in demand at railway docks and for tramways, and in metal manufactories at Birmingham and Sheffield. At other centers employment was plentiful. The textile trades were improving. Good wages were being offered for agricultural labor. Emigration was heavy.

The Chief of the Bureau of Statistics, in his October statement of the imports and exports of the United States, reports that the excess of the value of exports over imports of merchandise was as follows: Month ended October 31, 1883, $15,081,586; four months ended October 31, 1883, $17,076,410; ten months ended October 31, 1883, $61,159,429; twelve months ended October 31, 1883, $122,410,144. The total values of the imports of merchandise for the twelve months ended October 31, 1883, were $691,057,599, and for the twelve months ended October 31, 1882, $752,154,852, a decrease of $61,097,253. The values of the exports of merchandise for the twelve months ended October 31, 1883, were $813,468,543, and for the same period the preceding year $841,179,533, an increase of $72,289,010.

The Portland (Ore.) *Northwest News* discusses editorially the advantages afforded by the Oregonian metropolis. The city is excellently located, and with more railroads terminating there Portland expects to be the center of the entire North Pacific country. Little competition is expected from towns on Puget sound. Portland will have a fine harbor after dredging the mouth of the Columbia river. Notable investments of capital are mentioned in the construction of the Portland dry dock, the railway shops, wharves, warehouses and elevators at Albina, the new hotel, the bridge across the Willamette, and the grand union depot. The *News* adds that the importation of provisions and seeds over the Northern Pacific has depressed the market price about 20 per cent. in Oregon. A similar effect on prices of other commodities from a like cause is looked for.

Birmingham, Ala., is a city of rapid growth. The Atlanta *Constitution* says the first house was built in July, 1871; now there are 2,500 houses and about 14,000 inhabitants. The product of its manufacturing interests in 1882 was valued at over $6,500,000. Iron at Birmingham is selling lower than ever before. With the price last year as high as in the year preceding the iron product of Birmingham would have reached $12,000,000. Coal, ore and limestone are at hand in great abundance. In 1882 the output of pig iron was short of 300 tons daily; at present it is about 600 tons. The Birmingham furnaces are shipping iron into Cleveland and Ironton, Ohio, the cost laid down at those points being $17 per ton, including freight. The price of real estate has advanced over 50 per cent. during the past year. Birmingham is easily reached by the Georgia Pacific Railroad.

The following national banks have been organized: The First National Bank of Tarkio, Mo.; capital $50,000; David Rankin president; no cashier. The First National Bank of Logansport, Ind.; capital $230,000; Andrew J. Murdock president; William W. Ross cashier. The Independence National Bank of Philadelphia, Pa.; capital $500,000; Peter A. Keller president; Willard B. Moore cashier. The Exchange National Bank of Hastings, Neb.; capital $100,000; Isaac M. Raymond president; Abraham Yeazel cashier. The Logansport National Bank, Indiana, has gone into voluntary liquidation. J. P. Pomeroy has been elected president of the First National Bank of Frankfort, Kan., in place of W. Hetherington. Charles H. Leland has been elected president of the Sixth National Bank of New York city in place of Francis Leland.

An English technical journal, in speaking of the trade in India, says most of the jute mills have been doing well, paying good dividends. Where machinery has been introduced in the tea industry the number of coolies employed has been lessened, in some cases 70 per cent. The following table shows quantities and values of metals imported into Calcutta during the year ending March 31:

	Cwt.	*Rupees.*
Copper, unwrought	118,697	49.72 630
Copper, wrought, including old	110,624	47.91.067
Iron—		
Unwrought (including pig, scrap and old iron for remanufacture)	141,183	3.07 293
Bar	413 169	21.83.901
Angle, cast and rod	199,945	9.85.043
Sheets and plates	281,619	16.48 628
Galvanized (other than wire)	108,008	10.16.687
Hoops	42,724	2.38.555
Anchors, cables and Kentledge	11,990	98.471
Nails, screws and rivets	24,980	3.03.001
Wire	3,842	50.304
Other kinds	279,142	21.35.759
Total iron	1,507,622	89.67.642
Tin, unwrought	28,431	18 85.178
Quicksilver, pounds	192,981	2.01.070

The total value of the imports of manufactures of silk at New York during November, reported by the Silk Association of America, was $1,723,643, against $2,532,026 in November, 1882, $2,460,872 in November, 1881, $1,443,976 in November, 1880, and $1,359,904 in November, 1879. The following table gives the differences in values of the various importations of silk manufactures last month, as compared with the like month in the preceding years:

	1883.	1882.	1881.	1880.	1879.
Silk piece goods	$939,949	1,403,927	1,295,959	746,865	749,110
Satins	6,057	17,004	12,986	8,613	20,331
Crapes	27,129	17,562	20,425	13,697	16,729
Pongees	....	3,918	....	....	....
Plushes	78,440	104,284	147,218	45,960	10,985
Velvets	132,927	182,344	85,033	49,987	91,488
Ribbons	151,081	91,527	165,347	112,037	139,575
Laces	91,871	191,768	251,142	82,376	26,902
Shawls	1,143	72	....	445	447
Gloves	9,102	4,074	1,705	3,933	2,011
Cravats	1,275	1,255	2,310	3,779	5,936

Hose	6,416	18,580	5,565	3,658	4,156
Threads and varns	20,513	48,101	11,892	6,423	13,223
Braids & bindings	85,014	88,194	80,191	66,579	88,524
Silk and worsted	10,237	5,130	7,592	4,919	2,453
Silk and cotton	155,546	347,003	364,426	288,171	183,702
Silk and linen	....	....	136	....	....
Totals	$1,723,643	2,532,026	2,460,872	1,443,976	1,359,904

There were entered at New York for consumption last month silk goods to the value of $1,235,086; stored in warehouse, $488,557; total value imported, $1,723,643; withdrawn from warehouse, $348,310; value placed on the market, $1,583,396.

The New York canals have been closed for the winter. They were opened May 7. The season has been favorable for the boatmen. The total movement of cereals, reported by the Albany *Journal*, shows an increase of 14,395,257 bushels as compared with last year. The figures are:

	1882. *Bushels.*	1883. *Bushels.*
Flour (bbls.)	6,918	7,614
Wheat	19,506,766	18,977,666
Corn	8,618,045	18,307,321
Oats	565,377	2,949,375
Barley	310,297	541,773
Rye	677,395	3,302,306

The shipments of anthracite coal amounted to 1,002,925 tons, and bituminous to 106,473 tons. The amount of iron ore shipped was 290,516 tons, merchandise 165,222, and railroad iron 45,843 tons. The following table gives the tonnage, length of season and daily shipments for the past eight seasons:

Year.	*Days.*	*Tonnage.*	*Daily Average.*
1876	211	4,173,129	19,821
1877	214	4,955,963	23,129
1878	237	5,171,320	21,390
1879	212	5,362,372	25,247
1880	216	6,457,656	29,896
1881	206	5,179,102	25,141½
1882	241	5,450,423	22,201
1883 (less six days)	209	5,474,499	26,193½

The shipments of grain sent east during the past seven years were as follows:

Season.	*Bushels.*	*Season.*	*Bushels.*
1877	44,808,609	1881	31,150,761
1878	58,353,679	1882	29,715,428
1879	54,164,075	1883	43,844,425
1880	71,909,964		

A dispatch from Syracuse says that the canals are clear of ice. There were no boats on the Syracuse levels of the Erie or Oswego canals December 2, and the boats owned in that region had all reached their winter quarters.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

"Congress is a great disturber of Wall street," was a remark made in this column last week in discussing the state of the market; "it is always uncertain what it will do, and uncertainty paralyzes the business of stock speculation." The near approach of the meeting of Congress contributed for this reason to dull the market last week. When Congress did meet, and chose Mr. Carlisle for Speaker, there was a feeling very much like consternation in certain circles in Wall street. The news of the action of the Democratic caucus was received over a dozen private wires in this city on Saturday night last, and the usual gathering of brokers and others at the Windsor Hotel that evening were interested to see one of the sofas in the large hall occupied by three men who sat in earnest confabulation, apparently, from nine o'clock until nearly eleven. It was Mr. Woerishoffer on one side, Mr. Cammack on the other, and between, listening most of the time with his usual cool attention, Mr. Gould. Mr. Gould is a busy man and every moment of his time has value; it may therefore be inferred that he did not give two hours of it that night to two of the chief bear leaders in the market merely for gossiping purposes. "What does that conference mean?" was asked by a good many, and the speakership at Washington was considered to have something to do with it. When the market began to break this week and the heretofore quiescent bears came again to the front, hammering right and left at everything but the Gould stocks, those who had been witnesses of the conference thought that an agreement had been reached between Mr. Gould and the bear party which was showing its effect. It is certain that the election of Mr. Carlisle disarranged plans somewhere. That may be relied upon. What the plans were we have no means at this time of knowing, but it will come out probably sooner or later. The land-grant railroads were thought to be particularly threatened, and Mr. C. P. Huntington was quoted, it is hard to say how correctly, as saying that the speakership business would prove as disastrous to the railroads as the assassination of President Garfield.

It was not so much what Mr. Carlisle would do personally which seemed to worry; it was the attitude of the majority of the House as evinced in his selection which had the alarming effect. It was argued that the House was bent on giving a "shake up" to things, and the anticipations that the session would "be distinguished by some radical work in the way of tax reduction, possibly further tariff reform, and agitation for extending government control of the railroads," as was said last week, seemed already realized. The weakness of the Villard stocks, which began to show itself on Monday, and created great alarm on Tuesday, was thought to be a direct consequence of Mr. Carlisle's election. Whether this be true or not, certain it is that these stocks have again distinguished themselves by their ability to break themselves and break the market in the doing of it. Oregon Transcontinental went first, and in such a way as to show that something was radically wrong somewhere. Then Northern Pacific preferred broke, and when that went it was seen that things were bad. The fall in Oregon Transcontinental might have plausibly been attributed to bear operations, and that excuse was in fact made for it. It was said the bears were raiding it for effect on the market. The fall, however, was too evidently the effect of long stock coming out to deceive any intelligent observer; but when Northern Pacific preferred went, there was no concealing the cause. No excuse of bear raids on that would hold water for a moment. Everybody knew that the stock was practically cornered, and men do not attempt to raid a cornered stock while they are fit to be out of a lunatic asylum. There is only one thing to be done with a stock in that position—leave it alone; and since the famous "squeeze," Northern Pacific, Michigan Central and Jersey Central have been left severely alone. The two latter have not yet developed symptoms of selling out by the pools who have them, but the Northern Pacific people evidently found themselves under the necessity of selling, and both the common and preferred and Oregon Transcontinental all went down together. The preferred reached nearly as low a point as in the last great break. It is too soon to say where it will strike bottom, or if it has already done so. It is hardly likely to find any buyers at these prices except the shorts, who had their "seller 60" contracts out, very many of which matured this week. When only the shorts buy it leaves the market for the stock a little worse than it was, since it is deprived of the sustaining influence of the short interest. The market was very skilfully manipulated by Mr. Keene to counteract the depressing effects of the break in the stocks referred to, but the influence was only temporary. They have so long acted as the hammers to all prices that when they started into activity again in the old fashion a feeling almost of terror was spread through the street.

As above said, Mr. Gould's stocks were left untouched by the bear party in their attack on the market, which began the moment it was seen that the Northern Pacific crowd were weakening. His Western Union was a little weak at the start, but this was surmised to be the selling by some operator—probably Mr. Keene—of some blocks of stock which he had to buy when turning the market on the Northern Pacific corner. After these had been taken the stock stiffened up again. His Missouri, Pacific and Wabash went with the rest of the market, with very light transactions in either, evidently merely the effects of supporting orders. The bear party turned their attention on Thursday, after the Villards had had their fall, to Union Pacific, Lake Shore, New York Central, and Northwest. A new movement was developed in respect to Union Pacific and Northwest. Ordinarily, after a stock is quoted ex-dividend, it is bid up in price so as to make it look better on the tape than it does with several points knocked off at a blow by the dividend. On this occasion the quotation "ex-dividend" was the signal for a savage attack on both stocks named, under which they were made to look rather sick. In respect to Union Pacific, the fight it is engaged in with the Denver and Chicago, Burlington & Quincy roads has caused it to reduce rates to figures quite nominal in comparison with its old-time monopoly charges, and it is said that at its present rate of earnings it cannot earn dividends, whether it pays them or not. Rumors are out that Mr. Sidney Dillon will resign the presidency of the company, and that Mr. Charles Francis Adams, Jr., will take his place. This is denied at the office of the company, but that amounts to nothing, for the Union Pacific office in this city is somewhat notorious for the variety and extent of the misinformation it dispenses. Friends of the property say that such a change would be of positive benefit to it. It is certain the story has been current in Wall street for two or three months past that Union Pacific would not see the end of its trouble until President Dillon went out of it. The short selling of Northwest was done, as alleged, on the discovery that a large block had been marketed during the previous ten days, and that delivery would be made as soon as the books closed. This stock was yesterday said to be the company's treasury stock, and that it was sold on account of the stormy outlook for the roads in the northwest. This was denied by the company's officers yesterday, who said they had bonds to sell if they wanted to raise money. Some one, however, sold stock, and a good deal of it.

The several roads there are assuredly in a great snarl, and nearly every prominent railroad man in the country is in the city at this time, where they meet on neutral ground, as it were, to discuss their differences. The troubles in the Iowa pool seem to have developed into something a good deal wider and more threatening than was at first supposed, and the air is full of rumors affecting all the great systems of the west and northwest. The general meeting of the railroad managers is called for the 13th inst. The work of discussion is now going on, and whatever may be the outcome the stories now current have all a most warlike tone. Alliances offensive and defensive between two or more roads against the others are constantly referred to, and the statement has actually been put into print that the Rock Island and Union Pacific have entered into a combination against the Chicago, Burlington & Quincy, the St. Paul, and the Northwest roads, and a grand fight is in prospect between the hostile forces. Strange things happen, and if this story turn out true it would be another instance of truth being stranger than fiction. It is altogether too incredible to believe until its truth be demonstrated beyond question. The eastern roads have their troubles also, the main disturbing cause now being the approaching completion of the West Shore, one effect of which is seen in the radical reductions the Central has made this week in certain classes of its passenger rates. The report was current that the company intended to put out a new mortgage of $20,000,000 to increase and improve its equipment, but this has been officially denied.

The loan market continues in its regular state of extreme ease, rates being 2 to 2½ per cent., and all the money any one wants—or can give good security for—being obtainable at these figures. It is many years since Wall Street has seen so easy a loan market as it has had this year, and one cause is beyond question the removal of the legal restraint on the rate of interest, though of course the chief reason is the comparative stagnation of business and the backward movement of the crops, due to the slow foreign demand and low prices. Exchange rates are down half a point from last week, being $4.82½ and $4.85. This year will pass practically without gold imports. Government bonds are higher, now it is thought that the tax on circulation will certainly be removed at this session of Congress, such action being recommended by the administration and calculated for in the government estimates. The following were the closing prices yesterday:

	Nov. 30, bid.	Dec. 7, bid.	Dec. 7, asked.

SUMMARY.

Special telegrams to BRADSTREET's from leading trade centers throughout the United States this week reveal a continuation of the dullness in most lines which has been reported from week to week for a month past. In dry goods, jobbers and agents report increased stagnation at the east. At western points, where until comparatively recently the distribution of fabrics has been exceptionally active, the movement has now become quite nominal. Staple groceries are going into consumers' hands with as much, if not more, activity than goods in other lines, beyond which not much on this point remains to be reported. Restriction of output among the iron and steel industries has not been sufficient to accomplish the desired result as yet. The iron rolling mills will shut down sooner this month, and remain closed longer after the holidays than heretofore this year. American pig iron is as dull as ever. Prices are still $20 for No. 1 X. Steel rails are steady at $35, and orders for some 50,000 have been given during the week for spring delivery. Want of winter delivery orders by some mills is likely to induce their shutting down. Bar is suffering most in the iron trade at present. The anthracite coal companies will cease production one-half of the time during the remainder of the month. The production of anthracite for eleven months of 1883 exceeds that of the like period in 1882 nearly 2,500,000 tons. Wheat has shown weakness and closes ⅞c. lower on the week. An increased visible supply, no gain in the foreign demand and heavy receipts at the west were the moving causes. Corn, however was stronger and from ⅞c. to 1⅛c. higher. Reports of the inferior grade of much of the stock received at primary points and an alleged unexpected deficiency in supply, together with a fairly active demand, have had this effect. Provisions have advanced, but lost a part of the same. The forces at work were mostly manupulatory. Ocean freights, except for petroleum charters to arrive, have been dull. Petroleum has been lower on speculation, although no change has been noted in refined. Crude in barrels has advanced ⅛c. The statistical position of the product continues to favor higher prices. There were 246 failures in the United States reported to BRADSTREET during the past week, 14 more than the preceding week, 1 less than the corresponding week of 1882, and 77 more than the same week of 1881. Canada had 33, a decrease of 1. There has been a larger movement of fine washed fleeces, but in general the consumptive demand for wool has continued moderate. Prices have been well maintained.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: General trade is moderate and featureless.

From Boston, Mass.: The volume of trade in leading departments shows no marked increase over last week, and dealers have settled down to the belief that there will not be much improvement in a wholesale way until opening of the new year. The holiday business is gradually working up with retailers, but it is not as brisk as at this time last year, and dealers are somewhat anxious. Raw staples, such as wool, cotton and hides, hold a pretty strong position, and wool sales foot up a fair business. The money market is very quiet, with an accumulation of loanable funds. The banks are discounting for regular customers at 5@5½, with 6 as an extreme figure.

From Philadelphia, Pa.: General wholesale business has continued moderate in volume during the past week, and there have been few important changes in values. The reorganization of Congress and the result of the contest for the speakership have reawakened uneasiness as to possible legislation on business subjects in some quarters. But conservative opinion in nearly all quarters is inclined to regard the situation with continued confidence and hopefulness.

From Cleveland, Ohio: Trade is becoming more quiet every week in almost all wholesale lines. Collections are very fair.

From Cincinnati, Ohio: General business has shown no marked signs of improvement. Merchants find collections easy and buyers scarce. The markets, however, exhibit a stronger tone in some of the leading lines. Manufacturers are inclined to reduce production; a portion of this latter feeling is possibly due to the approaching close of the fiscal year, which closes here December 31. Money is plentiful, and is being distributed among county banks for produce, receipts of the latter showing a reasonable gain over last week.

From Columbus, Ohio: There is but little change to note in general condition of trade, and as a whole business can be classed fair. Dealers in holiday goods report a fair demand. Collections are fair in all lines.

From Toledo, Ohio: Trade keeps up well, notwithstanding the open weather. Sales of dry goods and boots and shoes are somewhat ahead of last year. Collections are a little slow.

From Louisville, Ky.: Trade is seasonably quiet. Money is fairly active and bank balances are decreasing.

From St. Louis, Mo.: General trade is about the same as usual in this month. Industries are mostly quiet, and some factories are closing for repairs and balancing accounts. Money has been active all the week and there has been no gain of reserve. New York exchange is par to 50c. premium, and prime commercial bills 50c. discount.

From Kansas City, Mo.: General trade remains quiet. The weather continues unfavorable for sales of winter goods. Money is firm and active. Clearing-house returns show 39 per cent. increase over the corresponding week last year.

From Chicago, Ill.: Money is active. Offerings of grain and provisions' paper are larger and there are urgent calls from interior banks for rediscounts. Collateral loans 6 per cent. on call and 7 per cent. on time. Collections are only moderate. The flow of money to the country is free and domestic exchange is 60c. discount.

From Peoria, Ill.: There are no new features in trade to report. The weather continues very mild and has a depressing effect on trade.

From Detroit, Mich.: General business has been very quiet. The weather warm and unseasonable. Collections are fair.

From Evansville, Ind.: The trade in holiday goods has been very good during the week, but sales in staples are very small. Collections are falling off, especially in Illinois, and in some parts of Indiana. The banks report money matters very close and the demands larger, especially among tobacco dealers.

From Milwaukee, Wis.: Mercantile business is decreasing owing to the mild weather and stagnation in the iron industry. Collections are moderate; money is in demand at 6@8 per cent.

From Lawrence, Kan.: General trade has been quiet the past week. In certain lines it has been dull. Money is in fair demand and collections are moderately good.

From Topeka, Kan.: General trade is dull and collections are only fair. Money is in quite active demand, but the banks are able to supply all legitimate requests. New York exchange is $1 premium.

From Omaha, Neb.: Collections are now reported slow. Sales are good in winter lines of dry goods, rubbers and clothing, while other lines are quoted fair. General trade has experienced somewhat of a backset, owing to the partial failure of the corn crop here.

From Baltimore, Md.: The holiday trade has imparted a more lively tone to certain branches of business, but the general movement is light and no improvement is looked for until after the new year.

From Norfolk, Va.: General trade is not brisk. Money is a little tight. Collections are only moderate.

From Wilmington, N. C.: General business is depressed, and collections are slow. Corn, provisions and breadstuffs have advanced.

From Savannah, Ga.: Trade continues variable, with no steadiness in any line outside of groceries and produce, which continue in fair volume. Country merchants are not yet filling in stocks for the holidays.

From New Orleans, La.: General trade is good. Money is in good demand and firm. Securities are quieter but well maintained. An advance is expected in premiums owing to the better financial condition of the city, and in Louisiana sevens after the meeting of the nominating convention.

From Galveston, Tex.: The weather continues warm, with heavy rains Thursday. The dry goods and general jobbing trade is dull. Collections are only moderate. New York exchange one-quarter discount.

From Memphis, Tenn.: Business in general is active, and especially in breadstuffs and plantation supplies. Money 8 per cent.; exchange par.

INDUSTRIAL.

The window-glass blowers and employers have had another ineffectual conference, and the former have issued an appeal for aid, while the latter are gaining ground by importing glass. Another meeting will be held at Pittsburgh on Monday to further arbitration measures for the settlement of wage disputes between miners and operators. Seven thousand miners along the Pittsburgh & Rochester road in Pennsylvania compromised a strike for an advance from 30c. to 50c. per ton at 40c. and resumed work. Three hundred miners struck at Mineral Ridge, Ohio, on Tuesday. New gas wells are being completed in the Pittsburgh district, and a number of factories will soon be run with natural gas as fuel, The nail works of the Pottstown Iron Company are idle, and the other departments will probably shut down. The boltmakers and colored wire cleaners at Pittsburgh have struck. The Knights of Labor are getting up petitions to present to Congress requesting legislative checks to imported contract labor. The rolling mill of the Trenton Iron Company shut down Wednesday evening. A reduction of 10 per cent. has been announced at the New Jersey Steel and Iron Works. The striking oilcloth printers at Philadelphia have returned to work. Several glass and paper mills are projected. Considering the talk of industrial depression there is an unexpected degree of activity and confidence displayed in extending capacity. The labor troubles in New York city have been generally adjusted.

INDUSTRIAL FEATURES

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Factories fairly prosperous.

From Norfolk, Va.: Mechanical industries are exceedingly active.

BREADSTUFFS ABROAD.

The winter-sown wheat in the United Kingdom during the past week has been doing well. Business in breadstuffs has been dull, and prices for wheat and flour, except for special grades, have been lower. Importations of food grains into the United Kingdom are smaller, and farmers' deliveries have declined. Harvest prospects in Australasia continue fine. The gross imports of wheat and flour (in equivalent bushels of wheat) into the United Kingdom from August 25 to November 10, 1883, were 36,866,082, against 41,318,116 bushels in the corresponding period in 1882, and 31,268,209 bushels in 1881. The London *Millers' Gazette* now estimates that the United States will have 92,000,000 bushels of wheat to export, including 28,000,000 bushels from stocks carried over, or only 64,000,000 bushels from the short crop of 1882–83. It notes that since July 1 this year the exports of wheat from this country have been 32,000,000 bushels less than in a corresponding period last year, which it takes to bear out the estimate referred to. The expected heavy demand for foreign wheat from France has thus far failed to show itself. This is attributed to holders of French wheat pressing their stuff on the market. Recently French farmers have had less to sell, and values are nearer those demanded for foreign. Late estimates of the French crop point to but 80,000,000 to 90,000,000 hectoliters, as against 100,000,000 previously reported. This intimates that a revival in the demand from France is a matter of a short time only. Shipments from north Russian ports are declining and have about stopped altogether. At the south, prices are low, and holders are disposed to carry over stocks. In the most important wheat-growing regions of India continued rains are injuring the growing crop so seriously that the attention of the government has been attracted thereto. There are said to be, however, considerable stocks on hand from last year. Correspondence regarding the Indian wheat trade has been published between the Great Indian Peninsula Railway Company and the Bombay Chamber of Commerce, representations having been officially made to the railway company that the outward movement of Indian wheat was restricted by the high rates of transport from the interior. In their letter the railway company point out the various reasons which compel them to maintain their present tariff. In reply the Bombay Chamber of Commerce publish a letter, October 17, 1883, pointing out that insufficient warehouse room at the various stations in the interior, and "a lamentable want of rolling stock," form one of the main reasons why the trade has been restricted. The Indian government, in a recent estimate of the area under wheat, came to the conclusion that the present area was 19,329,200 acres, yielding 8 to 13⅓ bushels per acre, while experiments on government farms have proved that with proper irrigation and improved manuring the yield per acre could be nearly trebled. It is also asserted that large tracts of land are awaiting cultivation in the Punjaub and central provinces, while in the eastern districts a large surplus produce cannot be moved for want of proper communication. The great increase in the export of Indian wheat is attested by the fact that in the year ending March 31, 1881, the total was 7,444,444 cwt.; in the year 1881–82, 19,863,520 cwt., and in 1882–83, 14,151,765 cwt., while in the five months ending July 31, 1883, the exports reached the large total of 13,720,917 cwt. The estimated cost of production of wheat in India is a subject of much concern, now that values are generally supposed to be below the actual cost. In Germany wheat is dull. Central Russian provinces continue to ship wheat to the ports. The highest prices abroad of late have been in Portugal, where it has paid to ship it from the United States.

The quantity of wheat on passage for Europe December 5, as reported by cable, was:

	Wheat. Bush.	*Maize. Bush.*
For the United Kingdom	16,000,000	1,680,000
For the continent	3,040,000	520,000
Total bushels	19,040,000	2,200,000
Compared with the previous week:		
For the United Kingdom	15,000,000	1,360,000
For the continent	3,040,000	480,000
Total bushels	18,040,000	1,840,000
Comparison:		
Increase for the United Kingdom	1,000,000	320,000
Increase for the continent	....	40,000
Total	1,000,000	360,000
On passage same week 1882:		
For the United Kingdom	17,400,000	480,000
For the continent	3,520,000	320,000
Total	20,920,000	800,000

AMERICAN WHEAT MARKETS.

From the closing price for No. 2 red at New York, on November 30, the fluctuations in the market were very limited down to Wednesday night, options closing at that date at from ¼c. to ⅜c. lower. Corn had been the leading feature in speculation in grain, and wheat suffered in consequence. The rumors of wars in the East had but little effect. The advance knowledge of the gain in the visible supply, backed by heavy receipts in the west early in the week, contributed to the weakness observable. The orders to buy and to sell were about evenly distributed, hence no advantage was gained from that method of affecting prices by either bull or bear. Exporters have been buying the cheaper grades of spring wheat with noticeable freedom, but this is believed to be for speculation and not for shipment.

Judging by the record of the quality of car-load lots of wheat arriving in New York thus far this year, as compared with their real grade, and taking this proportion of the yield of 1882–83 as a sample of the entire crop, the harvest promises to possess 10 per cent. less flour-making power than an average. The significance of this, if it finally proves to be true, will be found in its practically reducing a possible 420,000,000 bushel crop some 40,000,000 bushels in fact. This, in connection with the poor prospect in India, noted above, and the outlook for increased wants in France, as previously mentioned, goes far to explain the steady front maintained by those who favor materially reduced exports as compared with last year, and higher prices as well.

Wheat lost ⅛c. on Thursday and fluctuated with no particular loss or gain on Friday, closing at practically the same figures as those noted for Thursday evening.

The stock of No. 2, red winter, at New York, December 1, was 5,109,987 bushels, an increase of 81,943 bushels in the week. The stock of wheat at New York, December 1, was 5,264 bushels larger than on November 24; 1,668,989 bushels larger than December 1, 1882, and 2,495,780 bushels larger than December 1, 1881.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended December 1 amounted to 2,215,177 bushels, against 2,147,323 bushels in the preceding week, and the shipments to 686,554 bushels, against 882,259 bushels in the week previous.

The receipts of wheat at the seaboard ports for the week ended December 1, 1883, amounted to 844,872 and in the previous week to 957,394 bushels. The exports from the eastern seaboard ports during the week ended December 1 amounted to 481,867 bushels, as compared with 672,923 bushels in the preceding week.

The course of prices of wheat options at New York and at Chicago (at 1 P. M.) during the week has been:

	New York.					*Chicago.*	
	Dec.	*Jan.*	*Feb.*	*Apl.*	*May.*	*Jan.*	*Feb.*
Fri. Nov. 30	$1.11⅛	$1.13½	$1.15⅜	....	$1.20⅛	.98¾	.99¾
Sat. Dec. 1	1.10¾	1.12¾	1.15	1.19	1.20	.97⅝	.98⅞
Mon. Dec. 3	1.10¾	1.12⅝	1.14⅝	1.18½	1.19¾	.97¼	.98⅛
Tues. Dec. 4	1.10¾	1.12⅝	1.14⅜	1.18¾	1.19¾	.96⅞	.97¾
Wed. Dec. 5	1.10⅞	1.12⅝	1.14¾	....	1.19¾	.96⅞	.97¾
Thurs. Dec. 6	1.10½	1.12¼	1.14¼	....	1.19⅛	.95¾	.96⅜

Canal navigation in New York has been closed for the season.

INDIAN CORN.

On December 1 speculative prices of Indian corn at New York had advanced about 3c. per bushel on the week, and at Chicago 5@5¼c. per bushel. By Wednesday, December 5, the advance at New York from the prices of the 1st inst. was from ⅞c.

to 1½c. to 1⅜c. per bushel, according to option; at Chicago the gain in the five days noted amounted to 2⅜@2¼c. per bushel. From Saturday, October 20, corn options at New York have advanced (to December 5) 6¾c. on December, and 8¼c. on January. The past week has witnessed the advertisement of an intended corner in December corn. The fact of its wide publicity is an obstacle to the success of any such movement, even if one had been seriously contemplated. There has been a heavy short interest in this cereal, but its activity, speculatively, and inclination to advance during the latter part of the week may be due to coverings as well as to anything else. The receipts continue heavy. There is no renewed export demand. The report of a heretofore unsuspected short crop has been used with some effect to help prices. The trading in corn during the middle of the week was almost to the exclusion of that in wheat. Indian corn on Thursday showed a net gain of about ⅛c., owing in part to the decreased visible supply and in part to the brisk demand. On Friday corn gained a fraction, but without new features.

The quantity of corn in store at New York and vicinity on December 1 was 3,088,399 bushels, against 3,291,878 bushels a week previous.

The receipts of Indian corn at Chicago, Milwaukee, St. Louis, Detroit, Indianapolis, Toledo, and Peoria, for the week ending December 1, were 1,528,509 bushels, against 2,029,995 bushels in the preceding week, and the shipments were 1,296,281 bushels, against 2,012,415 bushels in the week ending November 24. The receipts at the seaboard ports in the week ending December 1 were 1,038,556 bushels, against 917,610 bushels in the preceding week, and the exports were 409,401 bushels, against 501,556 bushels in the preceding week.

The course of prices of Indian corn at New York and Chicago (at 1 P. M.) during the week has been:

	At New York.				At Chicago.	
	Dec.	Jan.	Feb.	May.	Jan.	Feb.
Friday, Nov. 30	.63¼	.64⅜	.64¾	.66⅛	.54⅝	.54⅝
Saturday, Dec. 1	.63	.63¾	.64¼	.65¾	.54⅜	.54½
Monday, Dec. 3	.63	.64	.64¼	.65⅞	.55⅜	.54⅞
Tuesday, Dec 4	.63½	.64½	.64⅞	.66⅜	.56½	.56¼
Wednesday, Dec. 5	.63⅞	.64¾	.65¾	.67⅛	.57	.56¾
Thursday, Dec. 6	.64	.64⅞	.65⅜	.67⅜	.57¼	.57

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Nov. 30.		Dec. 7.

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Flour has ruled quiet, but prices have been well maintained on all desirable brands. The export trade in grain has continued dull, and speculation has been only moderately active. Wheat is ½@1c. lower, and corn 1½@2c. higher, as compared with this time last week. The depression in wheat is due to the large stocks and apathy of shippers, while corn on the other hand is strengthened by speculative buying stimulated in part by light receipts and reports of the inferior condition of a large part of the new crop, as well as a growing belief among operators that the year's yield has been overestimated. Oats have ruled stronger with corn.

From Cincinnati, Ohio: The flour market has declined a shade, more particularly the higher grades, the movement of which has been satisfactory. The volume of business is slightly smaller, but stocks are ample. Wheat receipts have been heavy. The market is heavy and better qualities are scarce, upon which prices are well sustained. The corn market has advanced and old corn is exceedingly scarce. Distillers have been compelled to use new corn, which so far is too soft.

From Chicago, Ill.: Wheat is moderately active in a scalping way. The market is destitute of strength. Prices are supported by other articles. Receipts are liberal, but there is no shipping demand. Corn is feverish. It opened weak but recovered the loss later and then declined. At noon is at lowest prices. January options show most the strength. Inspection less than 20 per cent. of contract.

From Peoria, Ill.: The new corn coming in is of a very poor quality, though receipts are liberal.

From Evansville, Ind.: Wheat is quoted at $1, and very little is moving.

From St. Louis, Mo.: Wheat is unsettled and downward, with receipts much heavier than shipments.

From Topeka, Kan.: Flour is only moderately active.

From Milwaukee, Wis.: Wheat receipts are larger than before on this crop, reaching 522,000 bushels for the week ending Thursday. The increase is due partly to low water at Minneapolis, where the millers cannot run on full time. Stock here is increasing rapidly. Shipments being light, the market is irregular and weak on its statistical position, but is strengthened by the advance of corn. Receipts of flour for the week are 95,000 barrels. Production is light, averaging about 3,000 barrels daily, and chiefly on old contracts and local consumption. No sales of moment made since the advance in freights.

From Omaha, Neb.: The corn crop has not come up to expectations, while the yield has been very heavy the crop for the most part is soft and still unsafe to crib or ship. Most of the corn is said to be good for feeding and it is believed that what No. 2 there is in the state should be held for next year's seed. Wheat is said to be the best the state has ever produced and oats are also graded high. But this being a corn country the loss on that crop is felt particularly.

From Baltimore, Md.: The wheat market is firm with a better inquiry, mostly from millers. Flour is quiet and steady with a moderate demand.

From New Orleans, La.: Grain is nominal. The stock of corn is 250,000 bushels. Receipts and exports are small. Flour is quiet. Stocks ample.

PROVISIONS.

The early week was characterized by a marked depression in hog products at the west, Saturday and Monday showing a very weak feeling. Lard dropped 23 points and pork 25c. per barrel. It was noted at the time that there was no apparent cause for this. Its origin was in reality due to the operators who desired to shake out small and weak holders and create a better level from which to make an advance. The removal of the French prohibition of the importation of American hog products did not exercise any lasting effect on prices, as no gain has been felt in the export trade. On Tuesday an advance in prices was again begun, when preceding highest figures were touched. These were exceeded by the quotations of Wednesday, when western spot lard sold at New York at 8.8c. This advance, however, does not appear to be based on new or prospective new business now in sight. The bulls again had the best of it on Thursday, but on Friday the market fluctuated, and showed but little strength after any advance. There are no new statistical features.

The stocks of hog products at Chicago were reported as follows:

	December 1.		November 1.	
	1883.	1882.	1883.	1882.
Mess pork, bbls	60,360	24,199	58,536	5,173
Other pork, bbls	13,140	4,604	6,866	3,468
Lard, prime, tierces	19,322	10,312	33,012	18,450
Lard, other, tierces	6,769	6,947	3,617	6,324
Bacon, S. C., lbs	3,695,005	2,514,209	995,783	122,866
Bacon, L. C., lbs	4,790,767	4,418,788	1,851,350	4,134,037
Bacon, S. R., lbs	13,496,528	12,454,365	3,488,685	5,519,428
D. S. shoulders, lbs	4,834,339	4,535,465	1,181,350	1,315,416
S. P. shoulders, lbs	2,773,200	1,901,472	1,567,100	1,539,913
S. P. hams, lbs	11,244,362	12,104,315	5,810,900	6,945,393
Other meats, lbs	15,781,737	11,480,044	12,084,139	5,528,485

The export of provisions from the Atlantic ports for the week ending December 1 were as follows:

	Pork, barrels.	Bacon and hams, pounds.	Lard, pounds.
New York	2,262	7,835,103	5,704,249
Boston	697	1,623,539	104,410
Portland	38	986,824	192,800
Montreal	....	.....	.....
Philadelphia	....	3,000,000	264,000
Baltimore	....	.....	83,298
New Orleans	127	1,950	25,150
Totals	3,124	13,447,416	6,370,907
Previous week	5,933	7,087,731	5,021,519

Following is a comparative statement of exports from the seven Atlantic ports during the period from November 1 to December 1:

	1883, pounds.	1882, pounds.	1881, pounds.
Pork	5,450,600	3,738,000	6,020,800
Lard	39,826,750	22,521,764	42,695,740
Meats	25,743,724	23,329,362	24,802,873
Totals	71,021,074	49,589,126	73,519,413

The prices for leading hog products at New York on the days named were:

	Dec. 1.	Dec. 3.	Dec. 4.	Dec. 5.	Dec. 6.	Dec. 7.
Lard, west. spot	8.57½c.	8.55c.	8.75c.	8 80c.	8.90c.	8.82½c.
Lard, December	8.45	8.45	8.58	8.70	8.76	8.74
Lard, January	8.58	8.58	8.65	8.90	8.86	8.83
Pork, mess, spot	$14.00	$13.75	$14.00	$14.00	$14.25	$14.25

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: In provisions the consumptive demand has been good. Sales are in excess of last year. Prices are somewhat irregular though stronger. Stocks are larger.

From Chicago, Ill.: Pork active and unsettled, trading being mainly between brokers. It opened weak and declined 25c. It recovered the loss at noon and declined 10c. on free realizing and light demand. Lard is active. It opened firm, but weakened with pork. At noon it was 15 points below the highest prices. The shipping demand is light. Meats are moderately active on speculative account. The shipping demand and prices are steady.

From Louisville, Ky.: Pork packing active bu restricted by variable weather.

From St. Louis, Mo.: Provisions are quiet at steady values. Both cattle and hogs are active, with good supplies.

From Kansas City, Mo.: In provisions the demand is good, and values are somewhat higher. Cattle have been fairly steady. Receipts have fallen off 3,000 head. Prices are substantially unchanged. Hog receipts have increased over 5,000 head, and prices declined 10c. to 20c., closing steady. Packers have been the principal buyers. Prices are too high for shippers.

From Topeka, Kan.: Cattle are steady.

From New Orleans, La.: Provisions are very firm and the supply is small.

THE NEW YORK DRY GOODS MARKET.

There are no new features to report respecting the dry goods market this week other than that the comparative dullness of the past few weeks has been intensified. Out-of-town distributing points report this quite as generally as do New York jobbers and agents. Boston and Philadelphia accord in the general report elsewhere that the demand is piecemeal and for reassortment only. No special improvement is looked for until after the holidays. The unseasonable weather of the week has had a generally unfavorable effect on the clothing trade.

The imports of dry goods at the port of New York, for the week ended December 6, were as follows:

	For consumption.		Withdrawals from Warehouse.		Warch'sed.	
Manuf'res—	Pkgs.	Value.	Pkgs.	Value.	Pkgs.	Value.
Wool	664	$227,434	208	$75,606	336	$138,025
Cotton	754	257,479	49	10,367	256	92,688
Silk	654	348,087	80	44,142	253	141,587
Flax	887	146,277	107	25,595	408	51,669
Miscellan's.	1,029	108,571	833	24,410	958	23,001
Totals	3,988	$1,087,848	1,277	$180,120	2,211	$446,971

The imports of all classes of dry goods into the United States in September were valued at $11,541,940, as compared with $13,383,303 in September, 1882, a decrease of about $2,000,000. About one-fifth of the decrease was in cotton goods, one-seventh in wool, and about one-eighth in silk, the remainder being of flax.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Dry goods continue active for the season.

From Boston, Mass.: The tone of the market for dry goods is decidedly tame, and movements of both cotton and woolen fabrics have been confined to small lots. There has been an unusually light jobbing movement, owing mainly to the comparatively mild weather, and agents are not making any effort to force business in their line. Prices are on a fairly-steady basis, but where goods have accumulated concessions could be obtained if buyers were prepared to act.

From Providence, R. I.: The print cloth market is reported quiet; 64s are quoted at 3½c. less ½ of 1 per cent., and 56x60s at 3 3/16c. The demand is light.

From Philadelphia, Pa.: Trade has been dull with agents and jobbers alike except in a few specialties adapted to the holidays. The market shows no quotable change, but the general position is rather in buyers' favor, especially on off-grades and outside brands of staple cottons and undesirable lines of woolen goods.

From Pittsburgh, Pa.: The trade in dry goods is quite as good as at the same time last year, if not better. Collections are satisfactory.

From Cincinnati, Ohio: The volume of business in dry goods has been light and the immediate future promises no encouragement. The continued warm weather has a depressing effect on dealers in woolens and contributes no little to retard trade. The falling off in demand is beyond anticipations.

From Cleveland, Ohio: Orders for dry goods are very small and the fall season is rapidly drawing to a close. The retail trade is active.

From Columbus, Ohio: Dry goods sales continue steady and as large as anticipated at this season.

From Louisville, Ky.: Dry goods are quiet and easy, and collections are fair.

From St. Louis, Mo.: Dry goods sales are moderately good for the season, though the mild winter limits the demand for heavy fabrics. Prices continue steady.

From Kansas City, Mo.: Dry goods share the prevailing dullness, although the past year has been the best in the history of trade here.

From Chicago, Ill.: Dry goods, millinery, fancy and furnishing goods selling fairly in small bills to the country trade, which shows unusual conservatism in buying holiday goods, these being the only articles showing activity. Many lines of heavy goods are restricted by the soft weather, which restricts consumption.

From Peoria, Ill.: Dry Goods are doing as well as can be expected.

From Topeka, Kan.: Dry goods are in fair demand.

From Detroit, Mich.: The dry goods business is only of moderate volume, confined to small sorting orders.

From Baltimore, Md.: Trade in all departments of the dry goods market has been dull and there are no new features of importance to note.

From Norfolk, Va.: Dry goods jobbers are doing their usual business, mostly on orders. Retailers are preparing actively for the holidays.

From Wilmington, N. C.: Dry goods jobbers report more animation. The retail trade is quiet.

From Savannah, Ga.: Dry goods stocks are being reduced and merchants are offering inducements for a further reduction to make room for spring supply.

From Memphis, Tenn.: Wholesale jobbers of dry goods report the volume of sales as showing no decrease and good for this time of the year.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: No movement of importance is expected in the clothing trade this month. Manufacturers are still getting a few orders, but the weather is not cold enough for a brisk retail movement, and the sales of overcoats are not up to expectation. In other respects stocks in manufacturers' hands are well cleaned up.

From Chicago, Ill.: Clothing, hats, caps and furs are slow.

From Lawrence, Kan.: The clothing trade continues good.

From Savannah, Ga.: Clothing is still backward and unsatisfactory, owing to warm, dry weather.

COTTON.

The market for spot cotton has been dull and easy, with a very moderate demand, which was almost entirely on spinners account. Quotations have remained unchanged during the week, the closing price for spot middling-uplands last night being 10 9/16c. The sales for the week have been as follows: For consumption 1,362 bales, and for speculation 350, making a total of 1,712 bales against 1,280 last week. Included in the above are 200 bales to arrive. The deliveries on contract amount to 7,600 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year (quotations are based on the American standard of classification and on cotton in store, running in quality not more than half a grade above or below the grade quoted):

	This week.	Last week.	Last year
Ordinary	8 5-16c.	8 5-16c.	7 13-16c
Strict ordinary	8 13-16	8 13-16	8¼
Good ordinary	9⅜	9⅜	9 1-16
Strict good ordinary	9½	9½	9½
Low middling	10 3-16	10 3-16	9 15-16
Strict low middling	10⅜	10⅜	10 3-16
Middling	10 9-16	10 9-16	10⅜
Good middling	10 13-16	10 13-16	10⅝
Strict good middling	10 15-16	10 15-16	10 13-16
Middling fair	11 7-10	11 7-10	11 5-16
Fair	12 3-16	12 3-16	12 1-16

STAINS.

	This week.	Last week.	Last year
Good ordinary	7 7-16	7 7-16	7 7-16
Strictly good ordinary	8 11-16	8 11-16	8¼
Low middling	9 5-16	9 5 16	8 15-16
Middling	10 3-16	10 3-16	9⅞

The market for spot cotton closed very dull.

The market for futures has been quiet and easy. Sales have been moderate, aggregating 339,200 bales, against 274,100 last week, and 515,200 for

the corresponding week last year. Quotations show a decline of 12 points for near months and 13 for later ones.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
December	10.53	10.61	10.31
January	10 57	10.69	10.34
February	10.72	10.85	10.45
March	10.87	11.00	10.56
April	11.01	11.14	10 68
May	11.14	11.26	10.80
June	11.26	11.39	10.92
July	11.37	11.51	11.02
August	11.47	11.60	11.12

The market for futures closed dull but steady.

The total receipts of cotton at the ports since September 1 are 2,625,308 bales against 2,616,700 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	374,898	379,613
New Orleans	....	616,903
Mobile	151,356	164,015
Savannah	446,794	468,214
Charleston	286,590	334,589
Wilmington	66,999	67,967
Norfolk	336,096	393,922
Baltimore	13,151	8,897
New York	23,069	36,001
Boston	35,546	53,658
Philadelphia	5,423	20,578

The receipts at the twenty-four interior towns usually reported were about 118,141 bales, against 103,306 bales last week and 122,526 bales for the corresponding week last year. The shipments for the week were 113,674 bales, against 93,420 bales last week and 109,541 bales for the corresponding week last year. The stocks for the week were 347,956 bales, against 338,210 last week and 261,330 for the same week last year.

Below will be found the receipts at each of the ports for the week ending December 7, 1883, with comparisons for last week and the same week one year ago:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	4,617	8,986	2,655	7,295	5,884	1,862
New Orleans	7,383	14,075	23,831	21,097	8,054	....
Mobile	4,483	5,627	2,137	2,019	2,285	3,160
Savannah	4,915	6,865	5,356	4,518	4,521	4,742
Charleston	4,163	3,272	2,725	3,668	3,235	3,632
Wilmington	308	1,287	1,180	1,071	830	1,102
Norfolk	4,179	6,218	4,730	6,878	7,601	5,982
Baltimore	550	405	....	....	....	....
New York	1,728	1,556	1,945	2,351	2,052	636
Boston	1,522	1,370	2,084	1,254	897	2,102
Philadelphia	6	....	....	....	....	100
Totals	33,852	49,661	46,942	50,151	35,359	38,734
This day last week	29,419	44,616	33,916	29,941	31,923	.....
This day last year	31,581	50,947	41,048	42,818	27,872	40,495

The spot market at Liverpool has been dull and easier, with a very light demand. Quotations show 2 points decline for middling uplands, the closing price last night being 5⅞d. Futures have been quiet and easy—the closing quotations last evening showing an average decline of 5 points for near months.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
December	5 53-64d.	5 57-64d.	5 54-64d.
December-January	5 52-64	5 58-64	5 54-64
January-February	5 51-64	5 58-64	5 54-64
February-March	5 56-64	5 61-64	5 56 64
March-April	5 60-64	5 61-64	5 57-64
April-May	5 63-64	6 3-64	5 60-64
May-June	6 3-64	....	5 63-64

The market for futures closed weak.

The sales for the week at Liverpool were 49,000 bales (of which 35,000 were American), against 56,000 (of which 41,000 were American) last year. The sales for export were 4,200 bales, against 4,800 bales last year. The sales for speculation were 1,740 bales, against 400 bales last year. The amount forwarded was 13,500 bales, against 22,500 bales last year. The stock in port is 500,000 bales (of which 302,000 are American), against 515,000 bales (of which 267,000 were American) last year. The total imports for the week were 96,000 bales (of which 83,000 were American), against 97,000 bales (of which 77,000 were American) last year, and the amount afloat 291,000 bales (of which 247,000 are American), against 313,000 bales (of which 260,000 were American) last year.

The Manchester market closed dull and lower.

COTTON.

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The cotton market is quiet. Middling uplands are quoted at 10¾c., and middling gulfs at 11c.

From Philadelphia, Pa.: There is very little demand, but prices rule steady.

From Cincinnati, Ohio: Cotton receipts are light and stocks to date 20 per cent. less than last year. Stocks on hand are liberal. Prices are well sustained under a good spinning demand. The much talked of factory, it is likely, will be erected here, though Portsmouth is a strong competitor for the mill.

From Louisville, Ky.: Cotton is quiet and easy.

From St. Louis, Mo.: Cotton prices tend slightly downward, with a fair domestic demand, though foreign orders are declining.

From Baltimore, Md.: The inquiry for cotton is moderate, and the market is without animation.

From Norfolk, Va.: Receipts of cotton unusually large. The weather is fine.

From Savannah, Ga.: Cotton is ruling quiet and easy but a better feeling is prevailing than for some time past with some demand and stocks more freely offered.

From New Orleans, La.: Large receipts of cotton and increasing estimates are depressing prices. The local increase is attributed to the settlement of the railroad freight handlers strike and the fine weather letting in cotton from interior. The decline since Thursday, last week has been in futures, 13 to 18 points; ordinary and good ordinary 3/16c.; low middling 1/16c. Middling fair advanced 1/16c. Better grades are scarcer. The movement of spots is liberal; futures are fair.

From Memphis, Tenn.: The cotton market is firm. Middling is quoted 9⅞c. The stock on hand is 86,986 bales.

WOOL.

The general demand for wool has continued moderate, but there has been more inquiry for fine washed fleeces, and some large transactions have taken place in the Boston market within the week. The supply of this kind of wool is light in all markets, and particularly in Philadelphia, where a better business could have been done had the offerings been larger. Purchases of between 200,000 and 300,000 pounds in Boston are credited to Philadelphia manufacturers. Holders maintain a very confident attitude on all descriptions, but particularly on fine and medium clothing and combing and delaine fleeces. Efforts have been made to create a "tariff scare" out of the result of the speakership contest in Congress, but the effect has not been apparent in any weakening of values. The dullness of the goods trade and the nearness of the time for stock-taking and repairs of mills are the principal influences against any general activity in the market at present; but there is little doubt among dealers but that all available supplies will be wanted for consumption before they can be replaced from another clip, and there is consequently no anxiety to realize in any quarter.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The demand for wool has been steady and the sales have been a good average, amounting for the week to 2,319,600 pounds of all kinds. Fine fleeces have been in demand, and prices are firmer. Some 500,000 pounds choice XX Ohio and Pennsylvania have been sold at 37@42c., including XX at 40@42c. per pound. We quote X at 37@38c., XX at 40c., and XX and choice at 41@42c. per pound. Michigan fleeces are firm at 35c. per pound for X, with some inquiry and a reduced stock. Delaine and combing fleeces are quiet, but the stock is small and the sales have not been to any extent. We quote fine delaine at 39@42c., and fine and No. 1 combing at 43@45c. per pound. In unwashed fleeces there has been considerable doing at steady prices, including all grades. California wool has been quiet, and no sales of any importance. Pulled wools have been in moderate demand, and remain unchanged. The sales have been at 40@42c. for choice supers, and 20@38c. for common and good. In Australia wool there have been further sales at 40c. per pound.

From Philadelphia, Pa.: The general market has continued quiet but firm. The week's sales foot up 500,000 pounds at unchanged prices.

From Cincinnati, Ohio: The wool market has exhibited no unusual movement. Desirable qualities are decidedly scarce and dealers lethargic. Prices are unchanged.

From Louisville, Ky.: Wool is steady and the movement light.

IRON.

The market for American pig this week has shown no signs of improvement. Prices are practically unchanged, although sales of 3,000 tons Nos. 1 and 2 X have been reported made, at $20 and $19.50 per ton. Aggregate sales have been light. At some western points, as indicated in special dispatches given below, stocks of pig have become so reduced that a feeling of firmness is mentioned and an improvement in demand and prices is looked for. On the whole, however, there is no good reason to report any gain in the American (Eastern) pig market, aside from the fact that stocks are not increasing. Scotch pig iron importations at New York during the week will aggregate about 1,200 tons, mostly sold to arrive, although it is possible that some of this may be stored. Prices for Scotch are so low at present (as noticed in detail last week) that there is little inducement to import, except on special order. We learn of offers of $24.50 per ton for a small lot of Coltness, some $2 above nominal quotations, which have been refused owing to there being none in port. The makers of American bar iron are closing down mills to such an extent that some good must result within sixty days. The 15th inst. will mark the closing of a number of manufactured-iron mills, for the holiday season. There is little new respecting plates and sheets, both varieties of which are in little demand. Steel rail prices are steady at $35, and some 50,000 tons have been ordered. Improvements are being introduced in Bessemer steel rail mills by which a further economy in manufacture will be effected. It has been given out that steel rails will be sold next spring below present rates. The western rail makers have rescinded their resolution ordering a five weeks' suspension. One or two steel-rail mills are said to be closing down because of scarcity of early orders.

THE AMERICAN IRON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Pig is moving moderately, and there is a more confident feeling in the market. Muck bars are weak. Blooms are quiet. Merchant bar is fairly active, although January iron is slow of sale. Several mills will reduce their output on the 15th, and more later. Plate and structural iron are under fair inquiry. Steel rails are weak, only small lots moving.

From Pittsburgh, Pa.: The iron trade in general is reported duller than at any time for five years past.

From Cincinnati, Ohio: Iron shows a strong recuperative tendency by renewed inquiry for pig. The belief is that the closing of lake navigation will advance prices on better grades. Manufactured iron meets with fair demand and stocks of all kinds ample.

From Cleveland, Ohio: There is no change in prices of pig iron, but stocks are decreasing and some dealers anticipate a change for the better early next year. Trade in manufactured iron is somewhat duller, and bar and sheet are quoted lower.

From Chicago, Ill.: Pig iron sales are restricted to small parcels. Some agents of Lake Superior charcoal irons are not offering stock at current prices. Bar, plate and angle iron are in moderate order demand. Stocks are fair but not excessive, and there is no pressure to sell except for cash. Nails are easy and the demand is moderate. Stocks are ample.

From Detroit, Mich.: In iron the demand is light and the market is dull.

From St. Louis, Mo.: Iron is dull throughout, but quotations are unchanged and stocks are rather light.

THE HARDWARE MARKET.

[By Telegraph to BRADSTREET'S.]

From Cleveland, Ohio: The hardware business continues very satisfactory.

From Chicago, Ill.: The current wants of manufacturers of hardware are about the same as last year, but orders are small. The market is rather weak on many lines. Stocks are not excessive.

From Savannah, Ga.: Hardware is steady and shows less decline than other lines.

COAL.

The condition of the anthracite coal trade is duller than it has been before this year. The action of the Pennsylvania Company in cutting their nominal (schedule) rates for Pittston coal delivered at Weehawken an average of 30c. per ton, and thereby reducing them to about the rate at which coal has actually been delivered for some time past, is sufficient indication of this. The efforts for a restriction of the output at the mines during December appear to have been successful, and coal mining, as per the current report, will be omitted on December 13, 14, 15, 20, 21, 22, 24, 25 and 26. The changeable weather has restricted sales from wholesale dealers' hands some. Bituminous cannot be quoted above dull. Prices for the same are low. The total production of anthracite in Pennsylvania to December 1 amounts to 28,418,805 tons, as compared with 26,100,188 tons in eleven months of 1882, an increase over last year of 2,318,618 tons.

COAL MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The coal market has been unsettled, with a decline in prices. The local consumptive demand is good. Dealers are making an attempt to consolidate the entire retail trade of the city under one management. Friends of the scheme are sanguine of success.

PETROLEUM.

The speculative petroleum market was dull during the earlier days of the week, and prices Monday night closed about where they left off on Saturday. On Tuesday the shorts raided the market and forced quotations down about 1c. per barrel. This was continued on Wednesday when the drop was 1⅞c. more to $1.13⅝. These changes took place in the face of the loss of 140,000 barrels of oil from tanks in November, due to excess of consumption over supply. The gross loss in that month is more likely nearly 200,000 barrels, when the effect of the cold weather is considered. The monthly report of operations in the regions favored the bull side. It is possible, however, that natural stimulants of an advance are taken advantage of by some operators to disappoint the outside public who are patiently waiting the opportunity to make their everlasting fortunes in oil. The market scored an advance of 1¾c. on Friday and closed strong. This reaction appears natural after the heavy sales to depress prices during the week.

The monthly report of operations in different districts in the oil regions during November, as compared with October, is:

Districts.		*No. wells completed.*	*New prod'n, barrels.*	*No. dry holes.*	*No. wells drilling.*	*No. rigs up and bldg.*
Bradford	Nov.	88	938	3	101	50
	Oct.	87	852	2	94	64
Alleghany	Nov.	128	1,288	4	133	79
	Oct.	149	1,485	5	144	118
Lower Country	Nov.	40	433	4	40	22
	Oct.	24	407	7	37	23
Warren and Forrest	Nov.	73	1,538	11	47	31
	Oct.	61	1,827	8	66	42

This is bullish in cast, as it marks additions of new work and a slight reduction in the production daily in the region. The monthly report, in the aggregate, with comparisons from preceding months in the current year, is:

	Wells completed.	*Wells drilling.*	*Rigs up and building.*	*New product'n, barrels.*	*Average, per well, barrels.*
January	124	126	131	2,789	22½
February	131	150	153	1,994	15 1-5
March	146	211	205	4,113	28 1-6
April	215	206	212	4,581	21½
May	235	197	176	3,676	15⅝
June	231	230	145	3,415	14 1-3
July	260	262	232	3,842	14¾
August	309	315	261	4,267	13 4-5
September	325	328	202	4,700	14½
October	320	336	251	4,576	14 3-10
November	329	321	182	4,197	12¾

The following shows the fluctuations in prices of pipe-line certificates at New York during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, December 1	1.16½	1.17	1.16⅛	1.16¼
Monday, December 3	1.16½	1.17	1.16⅜	1.16½
Tuesday, December 4	1.16¾	1.16⅞	1.15½	1.15⅝
Wednesday, December 5	1.15¾	1.15⅜	1.14⅞	1.13⅞
Thursday, December 6	1.13	1.14½	1.13	1.13⅜
Friday, December 7	1.14⅜	1.15⅜	1.14¼	1.15⅜

Refined oil during the first half of the week was not in special demand for early loading. Refiners on the other hand were not offering liberally, and prices were steadily maintained. Case oil, crude and naphtha were moderately active and steady. On Wednesday naphtha was advanced ⅛c. to 6⅛c., where it continued quiet. The request for crude has been mainly from French ports.

Prices, with comparisons at the close of preceding weeks, were last evening:

	Nov. 9.	*Nov. 16.*	*Nov. 23.*	*Nov. 30.*	*Dec. 7.*
Certifi's, crude	1.12	1.17⅛	1.18¾	1.16⅝	1.15⅝
Refined, 110°	8¾	8⅞	8⅞	8⅞	8⅞
Refined, 70°	8½	9	9	9	9
Crude, in bbls	7½@8	7⅜@8¼	7¾@8¼	7¾@8¼	7⅝@8¼
Case, plain	10⅜	10⅜	10⅜	10¾	10¾
Naphtha	6	6	6	6	6⅛

The export of petroleum from the United States, crude equivalent, for the week ending December 1, was 10,945,688 gallons, against 10,299,536 in the preceding week. The total export from the United States since January 1 was 599,022,519 gallons, against 577,359,268 gallons in the corresponding portion of 1882, a gain in the current year of 21,663,251 as compared with the gain of 17,747,567 gallons reported last week. The exports from New York, for the week ended December 1, amounted to 8,866,836 gallons, and for the year from January 1 to 489,984,567 gallons, against 454,877,330 gallons in a corresponding portion of 1882, showing a net increase from New York alone of 35,107,237 gallons exported between January 1 and December 1, 1883, as compared with eleven months' shipments last year.

OCEAN FREIGHTS.

The feature of the week in this line has been the good demand for petroleum charters to arrive, and which have been engaged at spot rates. There has been less request for spot tonnage in this line, which has therefore been dull. The scarcity, however, of available room has led to good rates for that engaged. The export of grain has been light, and no new feature respecting that branch of the market is reported. In most lines other than those mentioned the demand has been so light that quiet and dullness have been the chief characteristics. A fair amount of shipments on the berth have taken place at moderate rates.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Few cha[rters] written this week either fo[r] ation is substanti[al]

dull and firm, with a limited amount of tonnage in port. Liverpool berth room is well-filled with miscellaneous freights.

From Savannah, Ga.: Ocean freights are dull and unsatisfactory. Tonnage is in excess of capacity of loading.

From New Orleans, La.: several steamers chartered 42s. 6d. to 45s. per net ton register, December and January loading.

GROCERIES.

[By Telegraph to BRADSTREET'S.]

From New Orleans, La.: Sugar is steady and sales fair. Rice is steady with more sales. Coffee is dull, ¼c. lower.

From Chicago, Ill.: Groceries are selling freely for the season; stocks well adjusted and trade is considered in good shape.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The boot and shoe trade is still backward, and all hands are moving cautiously. The number of buyers here is about as large as usual, but orders are smaller, and the factories, though all starting up, have not full forces employed. Prices are steady.

From Columbus, Ohio: Boots and shoes are a little dull. Groceries in fair demand. Collections in all lines fair.

From Chicago, Ill.: Boots and shoes in fair demand and stocks in good shape.

LEATHER.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Leather is quiet and stocks are less than at this time last year, but sufficient for the demand, which is restricted.

TOBACCO.

[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: Leaf tobacco is active and steady. Receipts are fair.

TRADE EMBARRASSMENTS.

There were 246 failures in the United States reported to BRADSTREET'S during the past week, 14 more than the preceding week, 1 less than the corresponding week of 1882, and 77 more than the same week of 1881. About 70 per cent. of the failures were those of small traders, whose capital was under $5,000. The important firms reported embarrassed were John Paret & Co., wholesale clothing, E. Langsdorf & Co., clothing, S. M. Meyenberg & Co., silk manufacturers, and John H. Morrell, storage, New York city; The Dover Silk Manufacturing Company of Paterson; George D. Emery, mahogany, Chelsea, Mass.; Coates & Brother, rolling mill, Baltimore, and the Bank of Pike County, Pittsfield, Ill. Compared with the preceding week the middle states had 59, an increase of 14; New England states 23, a decrease of 6; southern states 58, an increase of 16; western states 91, an increase of 1; Pacific states and territories 15, a decrease of 11; Canada and the Provinces 33, a decrease of 1. In the principal trades they were as follows: General stores 52; grocers 34; clothing 26; manufacturers 20; dry goods 15; liquors 11; shoes 10; fancy goods 7; drugs 7; hotels and restaurants 6; hardware 5; hats 5; jewelry 5; bakers and confectioners 4; furniture 4; grain, flour, etc., 4; millinery 4; produce and provisions 3; lumber 3; books and stationery 3; harness 3; silk 3; leather 2; men's furnishing goods 2; tobacco and cigars 2; bank 1.

ALABAMA.

COLLINSVILLE.—Newman & Smith, general store, have assigned.

EUFAULA.—Richards & Moore, general store, have failed. Liabilities $7,800; assets about $3,000.

FLORENCE.—S. Cohen & Co., grocers, have assigned.

GEORGIANA.—J. M. Sims, general store, has assigned to E. C. Milner. He claims exemptions.

MOBILE.—Sigmund Vogel, clothing, assigned on the 1st inst. to preferred local creditors, and died on the 3d inst.

REHOBOTH.—Edward Wills, general store, is reported to have failed, with liabilities about $7,000.

ARKANSAS.

JONESBORO.—J. M. McKenzie, general store, has been closed by attachment.

LAVACA.—Plunkett & Wright, general store, are reported to have failed.

LITTLE ROCK.—John Bolger, grocer, has assigned.

MADISON.—W. M. Koger, general store, has assigned.

MARIANNA.—Becker & Rosenbaum, general store, have assigned to Julius Lesser. Liabilities $8,000; assets $9,500; preferences $3,000.

CALIFORNIA.

LOS ANGELES.—Meyerfield & Neustadter, cigars and tobacco, have been closed by an attachment for $3,000.

MADERA.—E. Moore & Co., general store, have been attached and sold out.

MODESTO.—George Woods, merchant tailor, has filed a petition in insolvency.

OAKLAND.—C. H. Hammitt, drugs, has filed a petition in insolvency.

RIVERSIDE.—Motthew Gage, jeweler, has been attached and sold out.

SAN FRANCISCO.—A. Cassidy, groceries and liquors, has sold out and called a meeting of creditors.

SAN FRANCISCO.—John Crowey, saloon, has been closed by attachment.

SAN FRANCISCO.—J. T. Holloway, of Thomas & Holloway, has filed a petition in insolvency.

[illegible]bott, merchant tailor, has filed

SAN FRANCISCO.—Turner Brothers, sirup manufacturers, were attached for $3,000 and closed.

SANTA ROSA.—M. Jacobs, tailor, has failed and compromised.

WALNUT CREEK.—A. W. Hammitt, general store, has assigned.

COLORADO.

CANON CITY.—O. J. Hoffman, millinery, has been closed on a chattel mortgage.

COLORADO SPRINGS.—V. H. Rosenberg & Co., restaurant, have assigned to John B. Cochran.

DENVER.—George L. Aggers, grocer, is making an assignment to George C. Corning, a silent partner, who says all claims will be paid in full.

DENVER.—E. L. Ames, dairy restaurant, has been closed by the sheriff.

DENVER.—Lewis Harrison, merchant tailor, has assigned. Liabilities $2,200; assets $1,200.

SLAGHTS.—C. J. Morris, saw mill, has assigned. Liabilities $1,625.

CONNECTICUT.

DANBURY.—Julius Meyers, hats and gents' furnishing goods, has assigned.

DANBURY.—Samuel Meyers, clothing, has assigned.

DISTRICT OF COLUMBIA.

WASHINGTON.—E. J. McPherson, drugs, has assigned to J. S. Swormsteat.

FLORIDA.

JASPER.—James E. Sharp, saddlery, is reported to have failed.

LAKE CITY.—E. S. Snowden & Co., sewing machines, books, etc., have been protested, and it is thought the assets would pay about 50 cents.

GEORGIA.

ATLANTA.—Casper D. Cheshire, grocer, has assigned.

BAINBRIDGE.—J. R. Babbitt, general store, has assigned, with preferences for $4,500. Liabilities $6,000; assets $5,000.

CENTERVILLE.—C. G. Hannah, general store, has failed and closed out.

COLUMBUS.—J. McGough, trading as J. McGough & Co., dry goods, has assigned, with large preferences. Liabilities $55,000; nominal assets $30,000. The business has been established since 1839.

COVINGTON.—Thomas Camp, foundry and machine shop, has suspended. He was thought to have done too much business for his capital, and collections being slow cramped him. His property is heavily mortgaged, principally to Frick & Co. to secure notes for engines he sold for that firm, for which he gave guarantee paper.

HALCYONDALE.—Blitch & Newton offer 33 1-3 cents cash or 25 cents cash and 25 cents in one year.

MACON.—J. O. McMillan, general store, has failed, and a receiver has been appointed.

THOMSON.—Walter S. Curtis, miller, did not assign, as previously reported, but sold out to Joseph T. Kendrick.

ILLINOIS.

ANNA.—S. M. (Mrs. W. S.) Meisenheimer, grocer, has failed.

CHICAGO.—Beek Brothers, produce commission, have assigned.

CHICAGO.—Cameron & Mareau, dry goods, confessed judgment for $22,000, and were closed by the sheriff on the 4th inst.

CHICAGO.—C. M. Gooderich & Co., grain, have suspended.

CHICAGO.—Ingram, Kitchen & Williams, government goods, have been closed by the sheriff.

CHICAGO.—Mattson & Appli, tanners and manufacturers of gloves, assigned on the 4th inst.

CHICAGO.—Miller & Umbdenstock, printers, have confessed judgment for $6,224.

CHICAGO.—Proctor, Cook & Co., fish brokers, have assigned.

CHICAGO.—L. A. Rivet & Co., wholesale jewelry, confessed judgment and gave a bill of sale for $6,025 to Charles Marcotte, of Kansas City. Liabilities $12,025; assets $9,200.

CHIGAGO.—Radzinsky Brothers, shirt manufacturers, have been closed by the sheriff on confessed judgments for $3,246.

CHICAGO.—George Ryall, trading as George Ryall & Co., perfumery, had judgment for $12,210 entered against him, and he sold out to George Catlin.

CHICAGO.—Charles G. Wertzler, tanner, has assigned to Aaron Waterbury.

KANKAKEE.—The Kankakee Coal Company has confessed judgment for $12,083, and conveyed real estate $1,990.

LITCHFIELD.—William B. Schoen, dry goods, has assigned to Jacob Levy, of St. Louis, to whom he claims he is indebted $12,000; other liabilities $8,000, unsecured.

MATTOON.—M. Hammer, dry goods and clothing, has confessed judgment for $9,000.

MATTOON.—Samuel Isaac, clothing, has confessed judgment for $15,000.

MATTOON.—Jacob Kohn, dry goods, confessed judgment for $800 and assigned.

PEKIN.—J. E. Jewett, grocer, has turned over his stock, etc., to J. & G. Herget, leaving no provision for the other creditors.

PITTSFIELD.—The Bank of Pike County has assigned. Liabilities unknown; assets $30,000. It has been established since 1870, had a paid in capital of $50,000, and average deposits of about $65,000.

RICHMOND.—A. P. Gray, agricultural implements, has assigned.

SECOR.—Meine Aul, grain, has failed. He gave a realty mortgage of $10,000 to secure a Peoria creditor.

SPRINGFIELD.—Salter & Carnochan, dry goods, have assigned.

VERMONT.—T. H. Bradley, general store, has failed.

INDIANA.

BRAZIL.—A. W. Turner, dry goods and woolen mill, has failed. Liabilities about $25,000; preferences to home creditors about $10,000. It is said there is nothing left for unsecured creditors.

DEERFIELD.—D. M. Pierce, general store, has assigned.

FORT WAYNE.—H. F. A. Gherke, grocer, has been closed by the sheriff.

FRANKFORT.—Samuel P. Fisher, grocer, has failed.

HYMENIA.—J. W. Manwarring, general store, has failed.

INDIANAPOLIS.—F. Hayes, clothing, has been closed by the sheriff.

LAFAYETTE.—John Sullivan, grocer, has been closed by the sheriff on confessed judgment for $2,700.

MITCHELL.—W. L. Boyd, grocer, has assigned to J. W. Burton.

MORRIS.—Joseph Bierbusse, manufacturer of buckets, has assigned.

MUNCIE.—B. Smith & Son, dry goods, have failed.

PERU.—A receiver has been appointed for B. F. Dow & Co., manufacturers of agricultural implements.

ROCHESTER.—Pfeiffer & Co., groceries and dry goods, have been closed on confessed judgment for $4,100.

SULLIVAN.—Louis Koltinsky & Co., confectioners, have failed.

IOWA.

ANITA.—Terbrush & Turner, general store, have assigned.

DOWS.—T. E. Cornish, drugs, has failed.

GUTHRIE CENTRE.—F. P. Wood, grocer, has been attached.

OTTUMWA.—George P. Daum, shoes, has assigoed. He previously gave chattel mortgages for $4,000.

OTTUMWA.—H. N. McCoy, contractor, has assigned.

KANSAS.

ATCHISON.—G. L. Florence & Co., wholesale notions, have assigned. Liabilities $11,600; assets small.

WATERVILLE.—Mrs. S. E. Woodford, general store, has been closed under a chattel mortgage.

KENTUCKY.

BOWLING GREEN.—R. L. McClure, saloon, has assigned.

LOUISVILLE.—Klass & Blitz, clothing, gave a realty mortgage for $1,200 and assigned.

LOUISIANA.

NEW ORLEANS.—R. A. Chiapella, dry goods, has failed and filed a petition for respite. Liabilities $9,624; assets $14,578.

NEW ORLEANS.—The liabilities of E. L. Ranlett & Co., cordage, etc., are $227,208; assets, $236,520.

NEW ORLEANS.—P. E. Voorhis, restaurant, asks an extension.

MAINE.

ATKINSON.—G. W. Doone, general store, has called a meeting of creditors.

BANGOR.—H. E. Marr, grocer, owes $13,910; actual assets $1,000. He offers 10 cents.

BANGOR.—F. S. Prescott, confectioner, offers 20 cents.

BATH.—Nathaniel Baker, shoes, has been sold out by the sheriff.

EASTON.—Kimball & Delarte, general store, have failed, and offer 40 cents. Liabilities about $8,000; assets $6,000.

LEWISTON.—Thomas Murray, grocer, has failed and offers 25 cents. Liabilities $1,643; actual assets about $500.

MILO.—W. T. Livemore, general store, has failed; liabilities $1,500, nominal assets $1,100.

PORTLAND.—Jefferson Chase, of Chase & Son, machinery, is in insolvency.

PORTLAND.—F. E. Haggett, grocer, has been attached.

PORTLAND.—Henry Maher, grocer, owes $10,000. His property is all mortgaged and he has made over his stock, accounts, etc.

PORTLAND.—A. Webb & Co., flour and grain, have assigned.

RAYMOND.—E. D. Harmon, general store, has failed.

SOLON.—A. M. Maynard, confectioner, is in insolvency. Liabilities $3,100; assets $2,500.

MARYLAND.

BALTIMORE.—Coates & Brother, rolling mill, assigned on the 4th inst. to John S. Tyson and Henry V. D. Johns, who filed a bond for $40,000. The liabilities are reported at about $75,000. Their mills were shut down on the 1st inst., the 200 men paid off and discharged.

MASSACHUSETTS.

ASHLAND.—Charles H. Tilton, shoe manufacturer, offers 33 1-3 cents.

BOSTON.—Arrington Brothers, wholesale boots and shoes have failed.

BOSTON.—The Bay State Iron Company, which failed some time ago, now advertises to pay a dividend of 40 cents on unsecured claims.

BOSTON.—J. R. Sanborn & Co., dry goods, are in insolvency

BOSTON.—George W. Townsend, submarine contractor, owes $14,000; unsecured assets nominal.

BOSTON.—Young, Thayer & Co., tanners' extracts, offer 30 cents, 10 cents cash, and 10 cents each in thirty and sixty days.

BRADFORD.—A. H. Atwood, grocer, offers 20 cents.

CHELSEA.—The liabilities of the Chelsea Iron Foundry Company are about $3,000. The assets are covered by chattel mortgage.

CHELSEA.—George D. Emery, mahogany lumber, has assigned. He began in Indianapolis, Ind., in 1869, was very successful, and opened in Boston in 1879, and two years later purchased the Gerrish wharf property at Chelsea, on which, together with the mill, it is said he expended about $150,000. The business was an experiment, it being the first and largest of its kind in that part of the country. In August he claimed to have a capital of $300,000 in the business, but admitted that he had not made much during the past year.

EVERETT.—Henderson Brothers, carpenters, are reported in insolvency. Liabilities about $8,000; assets small.

HAVERHILL.—Bernard Pizanski, peddler, has failed, and offers 50 cents. Creditors want 75 cents. Liabilities $2,000; nominal assets over $2,000 in accounts, small stock, and a house worth $2,000, mortgaged for $700.

LAWRENCE.—W. E. Seed, clothing, owes $4,400; nominal assets $1,300. Creditors have accepted 45 cents, 25 cents cash and the balance in 60 and 90 days.

LYNN.—S. H. Sawtell, livery, has filed a petition in insolvency. Liabilities $1,114.

NEW BEDFORD.—Theodore E. Lamton, grocer, is reported to have failed; liabilities about $3,000, nominal assets about $600.

NORTH BILLERICA.—H. H. Faulkner, general store, owes about $4,000.

SPRINGFIELD.—Newton & Fuller, flour, owe $28,882. The assets consist of book accouts $8,500, and stock which is mostly pledged to banks.

TAUNTON.—The liabilities of the Union Furnace Company are about $20,000. The property is all mortgaged, and unsecured creditors it is thought will receive but little.

WINCHESTER.—William Beaman, pail manufacturer, has assigned.

WORCESTER.—W. F. Prichard, drugs, has been attached. Liabilities $1,200; no assets.

MICHIGAN.

BIG RAPIDS.—A. Sachen & Son, clothing, have assigned to L. S. Baker.

BENTON HARBOR.—R. F. Shultz, harness, has failed.

DEXTER.—W. I. Keal, drugs, has failed.

EDMORE.—C. S. Knight, drugs, is reported to have failed.

FIFE LAKE.—F. D. Caulkins, drugs, has assigned.

MORENCI.—H. B. Brown, notions, has failed.

PAW PAW.—W. F. Cook, harness, has assigned; assets estimated at $2,800.

PORT HURON.—R. B. Raymond, hats and caps, has assigned to A. E. Stevenson.

SAGINAW.—A. K. Stevens, dry goods, has been closed on a chattel mortgage.

MINNESOTA.

BARNESVILLE.—F. N. Woolever, saloon, is reported to have left town.

DULUTH.—The Duluth Coffee & Spice Mills have assigned.

DULUTH.—Geisler & Hafeman, furniture, have been closed by the sheriff. Liabilities $4,000; assets about the same.

MISSISSIPPI.

CARTHAGE.—D. S. Hall, general store, has been attached for $838.

CLINTON.—Caston & Stubb, general store, have failed.

KOSCIUSKO.—N. A. Gaston, general store, has been attached for $6,000. Liabilities $14,000; nominal assets $8,000.

MISSOURI.

KANSAS CITY.—Frederick L. Crampton, grocer, has been closed by attachment.

ST. LOUIS.—The H. S. Falter Manufacturing Company, sash, doors, etc., was attached, and assigned on the 6th inst. to J. B. Greenfelder. About ten days ago it gave a trust deed and chattel mortgage for $25,000. The assets are valued at about $25,000. The company became embarrassed in September, 1882, and obtained an extension.

ST. LOUIS.—J. L. Peters, music, has compromised with a majority of his creditors at 40 to 50 cents. He now claims assets $55,000; liabilities $25,000.

MONTANA.

CLENDENNIN.—P. J. McDermott, saloon, has assigned.

NEBRASKA.

OMAHA.—R. Hirschbreng, jewelry, has been attached.

WEST POINT.—The West Point Paper Mill is advertised to be sold out by the sheriff.

NEW HAMPSHIRE.

CLAREMONT.—F. B. Danforth, grocer, owes about $4,000; nominal assets $3,000.

CONCORD.—George H. Moore, shoes, has assigned; liabilities about $3,000; assets nominally the same.

NEW JERSEY.

ELIZABETH.—R. W. Elliott & Co., rolling mill, are reported embarrassed and have closed up.

MILLVILLE.—T. B. Stratton, Jr., shirt maker, is reported to have failed.

NEWARK.—J. H. Hahn, market, is reported to have left town, and his wife is trying to compromise.

NEWARK.—Ludwig Schiff, dry goods, has sold out to H. B. Claflin & Co., who are creditors for $10,000. Liabilities $18,000; assets nominally the same.

PATERSON.—The Dover Silk Manufacturing Company has been placed in the hands of James Jackson as receiver. The company was incorporated December 28, 1881, with an authorized capital of $40,000, of which $26,000 was paid in. It has another mill at Dover. The liabilities are reported at $102,000; assets $70,000.

PLAINFIELD.—Evan Jones, hotel, has been sold out by the sheriff.

TRENTON.—R. C. White, grocer, has assigned.

WOODSTOWN.—Lippincott & Hollinshead, general store, have assigned.

NEW MEXICO.

SAN HILARIO.—The liabilities of J. M. Gallegos, Brothers & Co., general store, who have assigned, are about $50,000. They claim assets $100,000.

SILVER CITY.—Graham & Bohan, grocers, have turned stock over to creditors.

SILVER CITY.—J. S. Lyons, plumber, has assigned to J. O. Campbell. Liabilities $2,000; assets $3,000.

NEW YORK.

AMSTERDAM.—Clark & Kline, manufacturers of knit goods, assigned on the 3d inst. to N. P. Hinman, of Albany. The liabilities are estimated at about $200,000, of which $126,967 is preferred. The real estate was mortgaged for $60,000 and machinery chattel mortgaged for $16,000. The firm had a large amount of manufactured goods left on their hands since last year, which they were unable to dispose of, causing much financial inconvenience.

BROOKLYN.—Morris Davis, fancy goods, has assigned to Max Feuerstein, with preferences for $450.

BROOKLYN.—John McGrandle, shoes, has assigned to J. W. Shepard.

BUFFALO.—H. Campbell, saloon, is reported to have left town.

COOPERSTOWN.—Moses Maschke, clothing, has assigned.

CORNING.—The schedules of F. F. Freeman, shoes, show iabilities $7,255; assets $2,267.

GLOVERSVILLE.—F. W. Helwig, glove manufacturer, has assigned.

GLOVERSVILLE.—M. E. Owens, grocer, has assigned.

GLOVERSVILLE.—Willoughby & Co., grocers, have assigned.

LOCKPORT.—Louis Kayser, millinery and fancy goods, has been closed by the sheriff on a judgment for $5,087 in favor of Emanuel Dentsch, of New York.

MEDINA.—Patrick Horan, stone dealer, has assigned to Michael Cooper. Liabilities reported at $40,000.

MEDINA.—L. D. Robinson, shoes, has assigned to W. R. Delano.

MONTEREY.—The schedules of S. F. Kress, wagons, show iabilities $9,881; assets $3,338.

NEW YORK CITY.—Thomas Adelson (Adelson Brothers) artificial flowers, assigned on the 7th inst. to Isidore S. Beaumache, with preferences for $1,600.

NEW YORK CITY.—The schedules of Jacob Ash, clothing, show liabilities $9,401; nominal assets $3,052; actual assets $2,399.

NEW YORK CITY.—Alfred Brodek, clothing, assigned on the 4th inst. to Siegfried Freudenthal, giving prefereances to Louisa Brodek $3,500; S. Brodek & Co. $2,423; Henry R. Mount $125; total $6,048.

NEW YORK CITY.—Thomas Cunningham, manufacturer of skirts, assigned on the 4th inst. to Charles H. Reilly, giving preferences for $6,814. The liabilities are $18,000 for merchan-

disc and $10,000 contingent on a law suit for the alleged infringement of a patent.

NEW YORK CITY.—Ludolph Friedman, jewelry and auctioneer, assigned on the 4th inst. to George H. Benner, giving preferences for $2,936.

NEW YORK CITY.—Abraham H. Garrick, wholesale notions and millinery, assigned on the 7th inst. to George H. Carrick, giving preferences for $5,835.

NEW YORK CITY.—The schedules of Emil Hirsch, laces, show liabilities $45,764; nominal assets $37,265; actual assets $21,945.

NEW YORK CITY.—The schedule of Charles B. Jaburek, furs, show liabilities $10,400; nominal assets $10,708; actual assets $7,555.

NEW YORK CITY.—Seaman Jones, Jr. & Co., paper hangings, assigned on the 6th inst. to Joseph Hardcastle, giving preferences for $6,726. Seaman Jones, Sr., who started the business over thirty years ago, retired from the firm in September and his son took his place. Mr. Jones, Sr., was engaged in manufacturing fertilizers at Barren Island, where his establishment was burned in September.

NEW YORK CITY.—Frederick Klenen, grocer, assigned on the 1st inst. to William A. Denman, giving preferences to Austin, Nichols & Co. $588; Henry Klenen $3,000. He began in March.

NEW YORK CITY.—E. Langsdorf & Co., clothing, assigned on the 3d inst. to Edward Sallinger without preference. They began August 1, 1879, claiming $25,000 capital. The failure is attributed to poor business and losses by other failures. The liabilities are reported between $70,000 and $80,000, of which $33,000 is for borrowed money and the balance for merchandise; the assets are nominally about the same as the liabilities.

NEW YORK CITY.—Leeman & Dennis, manufacturers of cottage furniture, assigned on the 4th inst. to John Chadwick, giving preferences for $335. Liabilities $8,540; nominal assets $4,213; actual assets $3,084.

NEW YORK CITY.—The schedules of Levy Brothers & Co., wholesale clothing, show total liabilities $2,470,639, of which $739,855 is contingent and $1,037 individual. The contingent debts are mainly indorsements for F. Mayer & Co., Frankel & Butler, and other firms which have failed. The total nominal assets are $1,940,942; actual assets $1,712,242. The actual assets consist of stock $173,844; fixtures and samples $6,133; real estate $46,673; 375 shares Mutual Real Estate Company (hypothecated) $375,000; 112 shares Bronner Clothing Company (hypothecated) $157,920; other stocks and bonds $28,982; cash $1,221; book accounts $404,988 (nominal $465,019); promissory notes partly hypothecated $144,478; debts due $261,091; notes partly secured $111,009 (nominal $128,425). In the nominal assets is a claim against F. Mayer & Co. for $192,512, the value of which is unknown. This is exclusive of another claim for $132,062 on accommodation paper.

NEW YORK CITY.—Thomas L. McCanlis, awnings and rubber clothing, assigned on the 7th inst. to Thomas Starr, giving preferences for $3,482.

NEW YORK CITY.—S. M. Meyenberg & Co., silk manufacturers, assigned on the 4th inst. to Nathaniel Myers, without preference. Their factory at Hoboken, where they employ 400 hands, in included is the assignment. The liabilities are about $75,000 for merchandise, $75,000 to banks, etc., $75,000 to commission merchants for advances secured by goods valued at $100,000, and $77,000 mortgages on the factory property, which is valued at $175,000. They have $50,000 merchandise at the mill. The nominal assets show, it is said, a surplus of about $50,000. Their balance sheet for January 1, 1883, showed assets $477,741; liabilities $295,812. Since then the line of fancy goods in which they made their money went out of fashion, and they had to change their machinery to make a more staple class of goods. This, together with the decline in prices, expenses of running the establishment, interest account, and depreciation in value of goods still on hand, and the cutting off of accommodations, are ascribed as the causes of the failure. It is said the firm have been steadily reducing their liabilities without making corresponding purchases, and that they paid out over $125,000 in the past four months in this way.

NEW YORK CITY.—Morgan Morgan, Jr., silverwere manufacturer, assigned on the 5th inst. to William Hoyt, giving preferences to Morgan Morgans, Sr., $13,725; Samuel Jackson $500.

NEW YORK CITY.—John H. Morrell, warehouse, assigned on the 3d inst. to Edmund Stephenson, preferring Jennie Morrell $10,000; Mary C. Morrell $6,000. The failure is attributed to the effect of the fire which destroyed one of his warehouses in October, 1881, in which he claimed to have lost about $36,000 over the insurance he received of $64,000. He partly rebuilt, but his debts increased, while the income was not sufficient to meet them. His property is mortgaged for $150,000. In January he sold three houses and lots on Fourth avenue, near Thirty-second street, for $105,000, mortgaged for about half their value.

NEW YORK CITY.—Russell Murray, wholesale silk yarns, has suspended, and creditors have agreed to hold maturing obligations until the 20th inst. He was a creditor of the Dover Silk Manufacturing Company for $37,000, which is the cause of his suspension. Liabilities $102,000; assets $77,000.

NEW YORK CITY.—The New Jersey Cloth Converting Company offers to settle at 100 cents to all creditors holding paper indorsed by F. Mayer & Co., and 50 cents cash to other creditors. It is said most of the creditors have accepted these terms.

NEW YORK CITY.—Louis Novt, laces and fancy goods, assigned on the 7th inst. to Hugo Kanzler. He began here in September, claiming assets $26,766; liabilities $12,534. He hired the building No. 18 West 23d street for ten years at an annual rental of $9,500.

NEW YORK CITY.—John Paret & Co., wholesale clothing, assigned on the 5th inst. without preference to Charles L. Lord. The previous firm of the same name also made an assignment to Mr. Lord, giving Abraham Gray a preference for $8,000 on an indorsed note. Judgments were entered against the firm on the 4th inst. aggregating $51,505 as follows: Thomas D. Paret $3,955; H. B. Claflin & Co. $8,306; The Tannite Company $6,176; Anna E. Paret $5,565; Mary E. Paret $5,109; Caroline Paret $4,975; Catharine E. Schmidt $1,042; Wm. Paret $1,054; Abraham Gray $9,903; John A. Hulskemper $1,813; Jehial Parmly $3,600; on the 5th inst. a judgment for $45,955 in favor of S. W. Fay was entered against Mr. Paret individually. The firm have been regarded weak for some time past; their June statement showed liabilities $296,153; assets $425,366; surplus $129,219, from which it appeared that they owed more than twice the amount of their capital. The business has been established many years, the present firm succeeding Henry & John Paret in November, 1876. The liabilities are reported at from $250,000 to $275,000.

NEW YORK CITY.—The schedules of James S. Porteous, lumber, show liabilities $20,316; nominal assets $7,073; actual assets $5,513.

NEW YORK CITY.—The schedules of Rosenberg & Co., manufacturers of pants, show liabilities $101,747; nominal assets $80,826; actual assets $56,476.

NEW YORK CITY.—Maurice Seidenstock, hotel, assigned on the 1st inst. to John W. Kuhlenkamp, giving preferences for $1,051.

NEW YORK CITY.—The schedules of Vanderbilt Brothers, seeds, show liabilities $65,386; nominal assets $30,098; actual assets $19,010.

OGDENSBURG.—N. M. Curtis, flour mill, has assigned. He bought the mill six months ago at a high figure, and being unused to the business was unable to succeed. He has placed a mortgage of $9,000 on his farm.

ROCHESTER.—Wolff & Henricus, wholesale jewelry, owe $13,206; assets $4,792.

ROME.—Frank F. Pillmore, confectioner, has assigned to L. E. Elmer.

SALAMANCA.—S. B. Robbins, undertaker, has assigned.

SYRACUSE.—J. S. Atwell & Co., wholesale notions, have assigned to George B. Leonard.

SYRACUSE.—Benjamin Bronner, millinery, assigned on the 1st inst. to David Danziger. Liabilities estimated at $53,000, of which $23,000 is preferred; asssets in stock $22,000; accounts $20,000, of which $10,000 are considered good. His interest in real estate is said to be mortgaged heavily, leaving scarcely any equity. The failure is attributed to great falling off in trade, large expenses and loss by indorsement.

SYRACUSE.—F. A. Peso, spring beds, has assigned.

SYRACUSE.—D. M. Tompkins & Co., grocers, have assigned.

TROY.—J. LeRoy Pine, manufacturers' supplies, has been closed by the sheriff on judgment for $14,226.

TROY.—Louis White, furniture, carpets, etc., has assigned to Ellis Ellis, with preferences for $12,765.

UTICA.—The liabilities of S. W. Sherman, lumber, etc., are about $47,000; nominal assets $35,000.

NORTH CAROLINA.

NEWPORT.—D. McCain & Co., grocers, have assigned. Liabilities $1,300; assets $1,000.

OLD SPARTA.—Edwards & Mathews have assigned to W. G. Webb.

WILMINGTON.—J. W. Taylor, lumber, has assigned.

OHIO.

AKRON.—C. M. Ahlquist, merchant tailor, has assigned.

ARCANUM.—J. E. Koch, agricultural implements, has assigned to Samuel Kennerd.

ASHLAND.—H. Berkman, millinery, has assigned.

BELLE VERNON.—Henry Stubs, blacksmith, has assigned.

CINCINNATI.—B. Cohn, clothing, has assigned to Robert S. Fulton.

CINCINNATI.—Theo. Geverts, shoes, has assigned.

CLEVELAND.—G. Herber, shoes, has assigned to Frank Barker.

GALLIPOLIS.—A. Moch, clothing, has assigned to George House.

GREENVILLE.—M. Reutschler, grocer, has assigned.

GREENVILLE.—Russell & Jobes, grocers, have assigned.

HELENA.—Metzger & Cookson, general store, have assigned to Chauncy Senuel. Liabilities about $10,000; assets $14,000.

MANSFIELD.—J. Spandau, clothing, has assigned.

MARSEILLES.—Frank Williams, general store, was closed by the sheriff, but it is said he will probably resume, his father having executed a mortgage upon his property for $3,400 to meet his son's liabilities and to give him a chance to work out.

OTTAWA.—E. W. Hatton, jeweler, has assigned to O. B. Ramsey.

SHREVE.—G. W. Steuer, general store, has assigned. Liabilities $8,000; assets $3,000.

UPPER SANDUSKY.—B. F. Allen, restaurant, has assigned to E. D. Bare. Liabilities $3,000; assets $1,000.

WELLINGTON.—George A. Schroeder, grocer, has failed.

WEST SALEM.—Steuer & Weil, general store, have assigned to E. W. McFadden. Assets about $6,000.

OREGON.

EAST PORTLAND.—A. D. Pierce, well-borer, has been attached.

PENNSYLVANIA.

BETHLEHEM.—J. F. Walp, painter, has been attached.

BRADDOCK.—Execution for $2,990 has been issued against J. F. Frank, trading as J. F. Frank & Co., men's furnishing goods.

DAWSON'S.—Henry Hoop, baker and confectioner, has been closed by the sheriff.

EASTON.—The liabilities of Thomas J. Kay, grocer, are estimated at over $20,000.

LEWISBURG.—William Koehler, cigars and tobacco, was closed by the sheriff.

PHILADELPHIA.—Harry C. Barrett, hardware, was advertised to be sold out by the sheriff.

PHILADELPHIA.—Black Brothers, canned goods, have failed, caused, it is said, by the failure of a London firm. George F. Black is the only partner, and on the 1st inst. judgment in favor of E. Putnam, his mother, for $13,000 was entered up against him. This was for borrowed money, and he has since paid $3,000 on account. On the 3d another judgment was entered for $13,580 in favor of Charles W. Sparhawk, trustee for a number of creditors.

PHILADELPHIA.—Paul H. Born, dyer, has been granted an extension.

PHILADELPHIA.—Caldwell & Mason, manufacturers' supplies, wool, yarns, etc., who failed last August, are paying about 30 per cent. of their debts, and have sold out nearly all their stock.

PHILADELPHIA.—Clabby & Mehlmann, carpet manufacturers, are in the hands of the sheriff. Liabilities are thought light. Judgment to the amount of $650 was entered against Clabby and $299 against the firm.

PHILADELPHIA.—Edward Gamble, hosiery manufacturer, was recently sold out by order of the assignee, and it is said his effects brought good prices, and creditors may realize 15 or 20 cents.

PHILADELPHIA.—The interest of Cyrus Horne, of Cyrus Horne & Son, undertakers, was sold out by the sheriff on judgment execution for $610 in favor of the People's Bank. A judgment for $966 in favor of C. H. Horne, was entered the same day, and execution issued.

PHILADELPHIA.—Patrick Hughes, saloon, 2009 Market street, is advertised to be sold out by the sheriff on the 12th inst.

PHILADELPHIA.—George W. McFarland, stoves, tin roofer, etc., has been sold out by the constable.

PHILADELPHIA.—Charles O. Merbitz, hats, has failed, and offers 20 cents, payable on the 15th inst. Liabilities $3,000.

PHILADELPHIA.—Richardson, Anderson & Co., worsted spinners, are financially embarrased. Liabilities about $16,000; assets—stock $2,000, and machinery which cost $10,000 encumbered for $4,000.

PHILADELPHIA.—F. Sheetz, cattle drover, has compromised at 25 cents. Liabilities about $8,000.

PHILADELPHIA.—George W. Stead, manufacturer of cotton and woolen yarns, who recently confessed judgments in favor of his father, Isaac Stead, for $13,734, was sold out by the sheriff on the 5th inst. Liabilities were estimated at $25,000, including judgments, and the assets, as far as learned, were about $13,000.

PHILADELPHIA.—Frederick F. Speilisy, hat manufacturer, was sold out by the sheriff, and is now doing business as agent.

PHILADELPHIA.—John E. Uhler, shoes, was advertised to be sold out by the sheriff.

PHILADELPHIA (Frankford).—Borie & Mackie, manufacturers of umbrella sticks, have assigned to Charles Snyder. Liabilities $37,500; nominal assets $52,000 in real estate, machinery, stock, etc.

PITTSBURGH.—Execution for $3,900 has been issued against Joseph Levy, clothing. Liabilities are reported at $15,000; assets $9,000.

TROUT RUN.—Morlett Maxwell, lumber, has been closed by the sheriff. Judgments for $9,689 have been entered against him. His saw mill was destroyed by a boiler explosion November 16.

YORK SULPHUR SPRINGS.—The liabilities of Albert S. Hartman, general store, are about $20,000; nominal assets $12,000; actual assets $8,000.

SOUTH CAROLINA.

BENNETTSVILLE.—P. B. Emanuel & Brother, general store, have been closed by the sheriff.

CAMDEN.—B. M. Smith, general store, has failed, and confessed judgment to relatives for $9,000, and creditors it is said will not realize anything.

GREENVILLE.—Drennan & Brother, grocers, are reported to have failed.

GREENVILLE.—J. A. Garrison & Brother, grocers, have failed and sold out. Liabilities $3,000; nominal assets $1,500; preferences $600.

LANCASTER.—Hasseltine, Sons & Co., general store, have failed.

LANCASTER.—Twitty & Conners, general store, have faile

LANCASTER.—T. J. Welsh, general store, has failed.

SPARTANBURGH.—W. N. Pool, grocer, has failed.

TENNESSEE.

CLEVELAND.—B. Smith, grocer, has failed.

DYERSBURG.—J. A. Johnson, general store and saloon, has assigned. Liabilities $1,500; assets about $1,200.

FOWLKES STATION.—E. M. McCoy, general store, is reported to have failed.

JACKSON.—Withers & Pearson, dry goods, have assigned. Liabilities $12,000; assets said to be nearly as large.

KNOXVILLE.—P. M. Williams, wholesale grocer, has failed, and sold out.

MEDINA.—S. L. Hemphill, general store, is reported to have failed.

PULASKI.—H. G. Brown, dry goods, has assigned. Liabilities $4,600; assets $2,100.

ROGERSVILLE.—J. W. Grissey & Brother, general store, have assigned and gone out of business.

WAVERLY.—The creditors of Harris, Rogers & Co., general store, who were recently burnt out with a loss of $20,000 and no insurance, have agreed to an extension of one, two and three years.

TEXAS.

AUSTIN.—B. J. Kopperl, books and stationery, has assigned.

AUSTIN.—Frank McKay, clothing, has assigned.

NOTICE.

OFFICE OF THE NORTH RIVER CONSTRUCTION CO., MILLS BUILDING, NEW YORK, Dec. 1, 1883.

NOTICE is hereby given that the North River Construction Company offers to the subscribers to its original and increased capital stock, of record at the closing of the books on December 8, 1883, whose subscriptions are full paid, the right to subscribe for First Mortgage Bonds of the New York, West Shore and Buffalo Railway Company, belonging to the Construction Company, on the terms and conditions of an agreement of subscription, of which copies can be had at this office.

Each recorded holder of a full paid certificate representing shares of the Construction Company's stock will have the right to subscribe for one bond of $1,000 for every twenty shares of stock represented by such certificate, at the price of $900, receiving also ten shares of the capital stock of the Railway Company, belonging to the Construction Company, for each bond taken.

All rights to subscribe will cease Dec. 14, 1883, at 4 p.m. For purposes of this subscription the transfer books will close Dec. 8, 1883, at 3 p. m., to be reopened on the morning of Dec. 15, 1883.

By order of the Directors,

F. E. WORCESTER,
Secretary.

NATIONAL CABLE RAILWAY CO.

CAPITAL, $2,500,000.

OFFICE, UNITED BANK BUILDING,

No. 2 WALL STREET, NEW YORK.

OFFICERS.

WM. P. SHINN, President.
CONSTANT A. ANDREWS, Vice-President.
JOHN C. LEWIS, Secretary.
THOS. W. EVANS, Treasurer.
JAMES GAMBLE, General Manager.
Gen. EGBERT L. VIELE, Consulting Engineer.

JAMES GAMBLE, S. F. PIERSON,
JOHN W. MACKEY, J. B. SHAW,
W. S. WILLIAMS, GEORGE H. VILAS,
JOSEPH C. WALCOTT, THOMAS F. RYAN,
WM. P. SHINN.

The Company is the owner of all the Hallidie and other patents which have been so successfully operated on the street railway cable system, and is now prepared to negotiate for rights to use said patents in all cities and towns east of the Rocky Mountains.

The Hallidie is the only system which has been successfully worked upon the street railways in Chicago and San Francisco.

A fund of ONE HUNDRED THOUSAND DOLLARS, amply secured, is pledged to the Company to uphold its exclusive right to the system of street cable railways under the patents owned by it. These patents have been twice broadly sustained in the United States Circuit Court as commanding the cable system by decisions in contested cases, on both the law and equity side of the court, and the company and its counsel have an undoubted confidence in their validity.

The charter of the Company, which is organized under the laws of New York, confers all the powers and privileges of a Railroad Rolling-stock and Coostruction Company, by which it can cable and equip existing street railroads as well as to build new lines, and the exclusive right to grant licenses under these patents.

The promoters in the syndicate for carrying out the objects of the Company, in addition to the Trustees, include the following parties:

C. C. BALDWIN, Hon. ANSON G. McCOOK,
N. Y. STEAM CO., Hon. WM. DORSHEIMER,
WILLIAM R. TRAVERS, JOHN J. O'BRIEN,
E. L. OPPENHEIM, MARTIN B. BROWN,
EDWARD ANNAN, W. J. SYMS,
A. C. MOSS, Hon. J. J. ADAMS,
JOSEPHUS COLLETT, Hon. WM. J. SEWELL,
JOSEPH F. BOYD, W. L. MALCOM,
Dr. J. A. SHERMAN.

BRADSTREET'S:

A Journal of Trade, Finance, and Public Economy.

PUBLISHED BY THE BRADSTREET COMPANY,
279, 281, 283 BROADWAY, NEW YORK.

Terms, $5.00 per year in advance, including postage.
SINGLE COPIES, TEN CENTS.
SPECIMEN COPIES WILL BE SENT FREE UPON APPLICATION.

As a financial and commercial newspaper the foremost purpose of BRADSTREET'S is to be of practical service to business men.

Its special trade and industrial reports; its weekly epitome of bankruptcies throughout the United States and Canada, and the summaries of assets and liabilities, are alone worth the subscription price.

The synopses of recent legal decisions constitute an exceedingly valuable feature.

As commercial transactions, in the wider sense, are coming to be more and more conducted on a statistical basis, the information contained in BRADSTREET'S is of the first importance both to producers and middle-men.

THE TRADE AND AGRICULTURAL SITUATION THROUGHOUT THE UNITED STATES AND CANADA IS REPORTED BY TELEGRAPH TO BRADSTREET'S UP TO THE HOUR OF PUBLICATION.

MAVERICK NATIONAL BANK

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 15, 1883.

NOTES OF THE WEEK.

The grand jury of New York city, the Board of Apportionment thereof and Mayor Edson are engaged in a triangular difference as to the wisdom of appropriating $20,000 to meet the expenses of investigating the city's finances. The Mayor had suggested that the grand jury should make use of the clerical force of the Commissioners of Accounts. To this the secretary of the grand jury replies that no accountants should be employed who have had official connection with the administration of the city. The general point involved is chiefly of interest as showing the deplorable condition of New York city's government when the local grand jury has to take up the work. Let us see how such things are done in the neighboring city of Philadelphia. There all investigations are usually conducted by a committee of the city councils. Last winter a law was passed at Harrisburg giving to the investigating committees of the local legislature the power to subpœna witnesses. Thorough investigations are now conducted by said committees and all the testimony taken by them is given to the public day by day through the newspapers.

Thus the taxpayers, as a whole, are able themselves to be the real investigating committee. In Philadelphia a local investigation is political as well as judicial. It should be so in New York, but there is no political body clothed with adequate power. The nearest approach to a representative body is the Board of Apportionment, which is in reality no more than a committee of executive officers. It is our belief, based on an extended study of city administration, that the New York Board of Aldermen should be intrusted, provided other reformatory legislation be added at the same time, with the power of taxation and appropriation. This implies full authority to inquire into modes of disbursement on the part of executive officers. Ultimately the general sentiment of the community will coincide with this view if things are to grow better rather than worse. If they grow worse it will be by drifting toward a more complete confusion of responsibility. An investigation by the grand jury will be unsatisfactory at best. A valuable judgment may, possibly, be given out, but this is not enough. The public should have detailed information. Under the circumstances, however, the grand jury should have the appropriation asked for. It remains to be seen whether its labors will get at the proximate causes of abuses, or merely bring to the surface a few more isolated facts.

The retirement of Mr. Carl Schurz from the *Evening Post* has, not unnaturally, attracted the attention of the press, and comments thereupon have been numerous. Some of these seem to be framed rather with a view to popular effect than with a sincere desire to reflect accurately the exact condition of affairs in the *Post* editorial rooms, so far as that has been revealed. It is understood, of course, that Mr. Schurz resigned in consequence of differences of opinion between himself and his former colleagues regarding the relations of corporations to their employés and to the public. The journals referred to, however, are not content with simply stating the matter thus, but go further and declare that the *Post* is a "corporation newspaper," meaning thereby that it is at all times prejudiced in favor of corporations. It is difficult to see how such a view can be entertained. The truth of the matter probably is that Mr. Schurz's colleagues, Mr. White and Mr. Godkin, are conservative men, who shrink from going the extreme lengths against corporations that certain opinions now fashionable demand. Such men will naturally be found, if not actively opposing, at least passively resisting new and ill-considered if not unconsidered changes, in the interest of existing relations and conditions. And this they doubtless do in all sincerity; at least all that is known regarding them justifies that view. The charge that their ably-conducted journal is run as a corporation newspaper is, we believe, in a high degree unjust to the gentlemen referred to.

According to recent accounts the available assets of the Shaws are being frittered away, partly in consequence of the inharmonious relations between the committee of the creditors and the assignee, and partly because of the absence of any control by the assignee of the property in New York. For instance, it is said that much damage will result from the freezing up of vats in the tanneries, and that a great deal of valuable bark will be lost unless it is hauled to the tanneries and used. The assignee, it appears, is hampered in every direction, and is unable to take the necessary measures for the protection of the property. As a result a constant depreciation of the property is going on. It is further said that the sheriffs in New York are running the tanneries in their respective counties for the benefit of attaching creditors there, and, of course, to the detriment of the whole body of creditors outside of that state. This state of affairs furnishes another illustration, if one were needed, of the necessity of a uniform bankrupt law for the whole country, under which no set of creditors could derive any undue advantages from local circumstances. It brings into relief also the necessity of securing to some officer, acting under the authority of the court, an efficient control over properties of such a nature as those which composes the bulk of the Shaw's assets, and which require to be administered, at least temporarily, in order to prevent a depreciation in value.

In Washington underground telegraph and telephone cables connecting the capitol with other public buildings are now being tested on an extensive scale. Extra cables have been laid, and the fire and police wires have been attached so as to connect fire headquarters with one of the engine-houses. It is said that the superintendent of the fire alarm telegraph has made such tests as have convinced him that telegraph wires need not be strung on poles. It is gratifying to learn that so much progress has been made at Washington. The other great cities of the country should follow its example and rid their streets of the unsightly, inconvenient and dangerous telegraph wires and poles. Indeed, as recent terrible accidents indicate, the municipal authorities will before long be obliged to remove the wires on grounds of public safety alone. The wonder is that they have been allowed to cumber and disfigure the streets so long.

The committee appointed by the New York Chamber of Commerce last week to take action in regard to the preservation of the Adirondack forests, listened on Wednesday last to an address by Professor C. S. Sargent, of Harvard College, who said that no doubt could possibly exist as to the necessity of putting an end to the work of destruction now going on in the Adirondacks. He said that there was abundant testimony at hand as to the steady decrease in the flow of water from the Adirondack region. No more railroads, he said, should be permitted to run into the region under discussion, for the reason that certain destruction of the forests inevitably followed the construction of railroads. Being asked whether he thought a State Forestry Commission would be practicable, Professor Sargent said that there would be no trouble in organizing such a commission. In reply to the question whether it would be possible for a state commission to manage the Adirondack region so that the state might derive an income therefrom, Professor Sargent said that if railroads were kept out of the territory, and fires prevented, a sufficient quantity of lumber might be cut, from time to time, to yield the state an income without jeopardizing the water supply. The primary cause of the undue destruction of timber land was traced by the speaker to the desire of the owners of the property to sell their timber, and he suggested that perhaps this motive for cutting down the trees might be removed if the tariff on lumber were abolished. The committe will ask Governor Cleveland to call the attention of the Legislature in his forthcoming message to the necessity of preserving the Adirondack region.

It seems that Boston also is developing a distinctively municipal spirit. After a close contest (the majority being about 1,500) Gen. A. P. Martin, the candidate of the Citizens and Republicans, has been elected mayor over Alderman O'Brien, the candidate of the regular Democrats. The struggle was fought out on municipal, not party, grounds, the candidate elected by the Citizens being himself a Democrat. The significance of the election receives further illustration from the circumstance that at the November election Butler carried the city by over 6,000 majority over Robinson. The total vote was the largest ever cast in a municipal contest in Boston. The Citizens and Republicans have also secured a majority in both branches of the city council. There can scarcely be any doubt that this result was largely influenced by the fact that a special day was set apart for the municipal election. This system, which prevails also in Philadelphia, should be adopted in all cities of considerable size, to the end that municipal contests may not be complicated with issues entirely foreign to them. The Boston *Herald*, in an article expressing satisfaction with the result, says that Gen. Martin's strong Democratic antecedents furnish a sufficient guarantee that he will make no changes which are dictated by partisan considerations, the present administration being Democratic, and further expresses the hope that he will allow no false scruples to prevent the removal of unfit appointees.

COMMERCIAL RELATIONS WITH THE WEST INDIES.

The President's annual message contains the following passages on the subject of retaliatory legislation:

It is understood that measures for the removal of the restrictions which now burden our trade with Cuba and Porto Rico are under consideration by the Spanish government. The proximity of Cuba to the United States and the peculiar methods of administration which there prevail necessitates constant discussion and appeal on our part from the proceedings of the insular authorities. I regret to say that the just protests of this government have not as yet produced satisfactory results.

* * * * * * * * *

I have alluded in my previous messages to the injurious and vexatious restrictions suffered by our trade in the Spanish West Indies. Brazil, whose natural outlet for its great national staple, coffee, is in and through the United States, imposes a heavy export duty upon that product; our petroleum exports are hampered in Turkey and in other eastern ports by restrictions as to storage and by onerous taxation. For these mischiefs adequate relief is not always afforded by reciprocity treaties, like that with Hawaii or that lately negotiated with Mexico, and now awaiting the action of the Senate. Is it not advisable to provide some measure of equitable retaliation in our relations with governments which discriminate against our own? If, for example, the executive were empowered to apply to Spanish vessels and cargoes from Cuba and Porto Rico the same rules of treatment and scale of penalties for technical faults which are applied to our vessels and cargoes in the Antilles, a resort to that course might not be barren of good results.

The new Spanish minister, who is now on his way to this country, is reported to be charged with the special mission of endeavoring to improve the commercial relations between the United States and the Spanish West Indies. The suggestion of retaliation in the President's message ought to give the Spanish government a substantial hint as to some of the obstacles to commerce which have been interposed by that government between the United States and Cuba. The marvel is that the United States government has for so long submitted to unjust discrimination in our commercial relations. The Cuban customs regulations are so fluctuating and the laws are administered with so uneven a hand that it is not always possible to state what the exact nature of the commercial restrictions are; but it is always safe to assume that vessels of the United States at the ports of Cuba, under most circumstances, are charged $1.30 or $1.35 tonnage tax, a very notable discrimination against the United States, notwithstanding the slight increase in our tonnage dues in 1877, and there are many other respects in which the Cuban customs regulations are oppressive. The Spanish government has always pursued a discriminating and proscriptive policy with regard to the trade between the United States and Cuba and Porto Rico. Her West India possessions have always been relied upon by Spain as a principal source of revenue. It has been to the Spanish West Indies that the home government has looked for the means to defray the expenses of her foreign wars, of her civil contests, and of her extravagant home administration. Spanish greed with respect to Cuba has been notorious. Her discriminations against the United States were so marked that, prior to 1862, most of the flour shipped from the United States to Cuba was compelled to reach its destination by the way of Spain. The progress of events, to which the Spanish government even could not always be blind, forced some modification of these commercial restrictions, but export and import duties are still enormous, and their discriminating effect upon the United States is well set forth in the suggestion for retaliation contained in the President's message. Cuba is the natural market for many of the products of the United States; yet American grain products, meats, agricultural implements and clothing are in some cases almost trebly taxed by Spain before they are permitted entrance in Cuba, while the export tax levied by the Spanish government upon all products of Cuba destined for the United States is most oppressive, and, in some instances, of an almost prohibitory character. Yet it has been estimated that 75 per cent. of Cuban products finds a market in the United States. The result of such a policy is that the United States is deprived of its natural market in Cuba, and that the imports from that island to this country are generally five times what the exports are from the United States to the Spanish West Indies.

Our government submitted to this unjust discrimination during the civil war. There was no desire to invite any complications with European powers at that time or to afford Spain an excuse to give to the confederate cruisers the protection of her harbors. Our navy, what there was of it, was then too much engaged in the blockade of our own coast to be diverted to any movement against Spain. The first indication of our recovery from our weakness or irresolution was the determination to do something to offset the differential rates of duties by the increase, under certain conditions, of the tonnage tax upon Spanish bottoms from thirty to fifty cents in 1877. But this increase does very little to offset the enormous discriminations against United States commerce in Cuba. The Spanish government cannot carry its discriminations against the United States further without practically excluding itself from its chief basis of supplies, and if by any process of retaliation the United States should exclude Cuban products from her ports, the Spanish government would be deprived of the principal source from which its revenue for its home administration is derived. The Spanish government is, therefore, in no position to reduce its own revenues by making its present policy more restrictive, and the firm declarations of the President's message in favor of some retaliatory policy, unless Spain shall be more just, will, undoubtedly, meet the hearty approval of the American commercial world.

STATISTICS ABROAD AND AT HOME.

It seems at first sight not a little surprising that England, where economic science has been prosecuted with vigor and success for more than a century, and where so much practical use has been made of the results arrived at through statistical investigations, should have done as little as it has towards the establishment of a theory of statistical method. An explanation of this neglect is, however, forthcoming. In England the general opinion among economists has been that it is impossible to vindicate for statistics the character of a science, and that at best it constitutes only one of the auxiliaries of science. On the continent of Europe a different view of the matter is taken. It is there maintained that there is a science of statistics, and something has there been done towards establishing this view. In Germany, France and Italy elaborate treatises have been written developing the province and the method of statistics and giving a systematic treatment of the problems of statistical inquiry. It will thus be seen that the view taken by the continental thinkers has been more fruitful than that held by the English economists, even conceding, as is claimed by these, that the continental view is indefensible on philosophical grounds. In England, indeed, the abstract side of statistics has not been entirely neglected. The labors of the Statistical Society have done something to disseminate clear notions about the province and utility of statistics, but of the papers read before the society the number of those dealing with the theory of statistics has been very small. Perhaps no better illustration could be found of the state of the English mind upon this subject and of the slenderness of its equipment in the department of theoretical statistics than the fact that the last issue of the *Journal of the Statistical Society* contains an abridged translation of the well known German work of Dr. George Mayr on the "Conformity to Law in Social Life." The paper is a very practical one, especially in the part treating of the graphic representation of statistical results, where many useful hints are given. Nevertheless, one must account it not a little singular that it has been thought fit or necessary to present an abridged translation of such a book as that of Dr. Mayr before a society professedly devoted to statistical research.

It need scarcely be said that the United States is no better off than England as far as theoretical statistics are concerned. Those who have followed the discussions here upon the tariff question during the last two years must have become convinced that a wide and promising field awaits the labors of the theoretical statistician here. The press of the country has been teeming with undigested and unrelated masses of figures which the supporters of one doctrine or the other have dignified with the name of statistics. Such an indiscriminate use of figures must tend, in the long run, to bring the name of statistics into disrepute. The truth is that statistical science is in a primary stage in this country as yet. One result has been that the reputation of a statistician has not been a very difficult thing to acquire. A mastery of the simple arithmetical processes and a propensity for striking general averages have been the chief requisites for success. The public who have no time to devote to the laborious analysis of tables of figures and who have an interest in getting at the meanings of those tables are usually disappointed. There is room for a considerable improvement in the mode of employing statistics and in the method of presenting the results of statistical inquiry. The importance of this will be seen on a moment's reflection. Modern business, in the wider sense, is, as we have heretofore pointed out, coming to be conducted on a basis of statistics. It is through the aid of the statistics now furnished from the great centers of commercial activity that the merchant discovers the state of the world's trade at any given time, and the variations in demand and supply as they occur. A recognition of this fact has gone into the language of commerce in the phrase "statistical position" used with reference to this, that or the other commodity of crops. Statistics are not alone attractive to the student and the economist; they are, as we have always insisted, of immediate and vital interest to the man of business. The importance of an improved treatment of statistics being conceded, the question remains, how are better methods to be arrived at? The question seems to us to admit of but one answer. The only hope for such an improvement in statistical methods as is desired will be found to lie in the substitution of a systematic treatment of the subject for the unsystematic way of dealing with the elements of statistics which has too long prevailed. The facts and details to be arranged, analyzed and explained in a single department of statistics alone, such as that of trade, for instance, are so numerous that confusion can only be escaped through the aid of a well considered body of principles, and in the effort to attain to these we should look for inspiration and suggestion to the work already done by the statisticians of continental Europe, who have made the most important contributions to the theory of statistics.

NEW YORK'S SHARE OF EXPORTS AND IMPORTS.

The commercial preëminence of New York city as compared with all other domestic ports of entry and export is well shown by statistical tables published in the twenty-sixth annual report of the New York Chamber of Commerce. For ten years past New York city has continued to do more than than one-half of the entire foreign trade (exports and imports) of the country. In 1874 its proportion was 56.6 per cent., and in 1879, at the close of a long period of commercial depression, it still did 55.3 per cent. of the total. In the fiscal year ending June 30, 1881, when the renewed expansion of trade was at the full, the share of the metropolis in the foreign trade of the United States was 56.5 per cent. It was slow to feel the waning exports and imports in 1881–82, which decreased in the aggregate, as compared with those of 1880–81, $46,552,441, for in the twelve months first named its share in the trade of this country with others was the largest with one exception that it has been, 57.9, nearly 58 per cent. In the fiscal year concluded June 30 last the proportion was back to 55.5 per cent. as compared with 55.3 four years before—at the beginning of the late period of commercial expansion. An examination of the fluctuations in the foreign trade of the United States for ten years, together with the fluctuations of that of New York city, reveals a very apparent and curious tenacity on the part of the foreign trade of this city not to share at once to its full proportion in a decline in the country's foreign trade and in exhibiting greater recuperative power in periods of increasing foreign trade. This is best illustrated by an abstract as follows:

TOTAL VALUE OF EXPORTS AND IMPORTS (000's OMITTED).

Fiscal years.	United States.	Port New York.	—Increases.— United States.	—Increases.— New York.	—Decreases.— United States.	—Decreases.— New York.
1883.....	$1,607,330	$892,438	$40,258	.....	.....	$15,497
1882.....	1,567,071	907,936	.....	.....	$107,952	46,552
1881.....	1,675,024	954,488	61,253	$10,269	.....	.....
1880.....	1,613,770	944,229	411,062	278,886	.....	.....
1879.....	1,202,708	665,342	.....	346	7,810	.....
1878.....	1,210,519	663,996	3,421	16,724	.....	.....
1877.....	1,207,097	648,271	53,685	27,984	.....	.....
1876.....	1,153,411	620,287	.....	.....	81,619	93,054
1875.....	1,235,031	713,341	.....	.....	89,073	36,785
1874.....	1,324,104	750,127	.....	.....	16,794	8,296

During the total period noted the average annual proportion of the foreign trade of the United States held by New York city has been nearly 56 per cent., in detail 55.95 per cent. The smallest share was held by this city in 1877, when it amounted to but 53.6 per cent. of the whole. The largest proportion maintained was in the fiscal year 1880, when it was 58.5. The trade of New York with foreign lands in the last fiscal year was, therefore, .4 of 1 per cent. below the average for ten years. The

table printed clearly bears out the generalization made above respecting the pre-eminent vitality of commerce at the port of New York. In the fiscal year 1874 New York city's share of the total foreign trade of the country amounted to 56.6 per cent. In that year the aggregate value of total exports and imports declined, as compared with the preceding year, nearly 16.8 million dollars, New York's proportion of which loss was but 8.3 millions, or 49.3 per cent., 5.3 per cent. less than its proportion warranted. In the year 1875 New York's share of the total foreign trade was 57.7 per cent., but her interest in our net decline in exports and imports was but 41.3. In 1876 New York discounted its prospective decline in foreign trade for some years to come by a net loss, which, when the gain in shipments from other ports is considered, showed 93 millions loss for this port, as compared with but 81.6 millions loss for the country at large. It will be recalled how the gain in grain shipments from Baltimore, causing a loss to this port, were at one time feared as a presage of a much greater and very serious crippling of New York's prominence in this respect. By this city's discounting its possible losses in foreign trade for some years to come, reference is had to the fact that from 1876 to 1882 (fiscal years) inclusive, the aggregate of exports and imports at this city steadily increased, while the corresponding records for all ports (New York inclusive) showed a decline, in total, from $1,207,000,000 in 1877, to $1,202,000,000 in 1879. This exceptional record at New York naturally increases abnormally the proportion of losses for the years 1874–76 inclusive, when considered in the aggregate, to 75 per cent.

In 1877 the tide of trade from abroad and to foreign shores turned, and while New York's share of the whole was but 53.6, or but 1-5 of 1 per cent. less than in 1876, its share of the gains in commerce amounted to 52.2. In 1878 the total increase of exports and imports for the country had dropped to 3.4 millions, against 53.6 millions in the preceding year. New York's increase was 16.7 millions in 1878, against 27.9 millions in 1877. For the two years New York's share of the increases amounted to nearly 80 per cent., or about $44,000,000 out of $56,000,000. The momentum of the movement at New York left that city with a net increase in 1879 as compared with 1878, while the total foreign trade of the country fell behind that of the preceding year $8,710,000. In the fiscal years 1879–80 and 1880–81 New York's increased foreign trade represented 61.2 per cent. of the whole. In the former year its proportion of the aggregate foreign commerce was 58.5 per cent., and in 1880–81 it was 56.5 per cent. In the fiscal year 1881–82 the decline in exports of grain and provisions greatly reduced the total of foreign trade, but while New York's share of the whole was 57.9 per cent., its proportion of the loss sustained was 43 per cent. This being the chief port of entry to even a greater extent than it is one of export, the contractions in receipts of merchandise from foreign countries, as well as in our exports thereto, are reflected in the exhibit for the fiscal year ended June 30 last, in which the total for the city shows a decline of nearly $15,500,000 as compared with a gain for the United States of over $40,250,000.

The foreign trade of the port of New York and of all United States ports for the fiscal year ending June 30, 1883, was as follows:

	Port of New York.	Total all ports U. S.
Foreign merchandise, including coin and bullion, imported	$508,700,476	$751,670,305
Foreign merchandise, including coin and bullion, exported	21,166,859	29,812,922
Consumed and on hand	$487,533,617	$721,857,383
Domestic merchandise, including coin and bullion, exported	362,571,653	825,846,813
Excess of foreign imports over domestic exports at the port of New York	$124,961,964	.....
Excess of domestic exports over foreign imports at all ports of the U. S.	.....	$103,989,420
Total foreign commerce, 1882–83	892,438,988	1,607,330,040
Total foreign commerce, 1881–82	907,936,465	1,567,071,700
Decrease at the port of New York	$15,497,477	.....
Increase at all ports of the U. S.	.....	$40,258,340

This shows that New York secured nearly 68 per cent. of the total imports, and almost 44 per cent. of the aggregate of shipments abroad. New York's proportion of importations and exportations of leading articles are given as follows:

IMPORTED AT NEW YORK.

	P. c. total imports.		P. c. total imports.
Sugar and molasses	59.5	Leather and manuf'es	96
Wool manufactures	83	Tobacco and manuf'es	93.5
Silk manufactures	92	Wines and spirits, etc.	75
Cotton manufactures	87.7	Fancy goods	Nearly all
Flax manufactures	80.2	Precious stones	Nearly all
Coffee	75	Earthen and china	65.1
Hides and skins (not furs)	66	Furs and skins	94.6
Fruits and nuts	79	Jute, raw	Nearly all
Tin	62.9	Silk, raw	27.7
India rubber, etc.	Nearly all	Hemp, raw	72.1
Iron and steel	56.2	Rags	71.1
Tea	65.1	Wool	43

EXPORTED FROM NEW YORK.

	P. c. total exports.		P. c. total exports.
Provisions	70.5	Leather	66
Cotton, raw	16	Fur and fur skins	Nearly all
Oils, mineral	81.1	Oil cake	61.7
Tobacco leaf	63	Horned cattle	35.7
Cotton manufactures	66	Tallows	63.3
Breadstuffs	40.8		

From the few leading products which this country is enabled at present to export, the importance of holding such proportions of commerce as are already possessed may be easily perceived. The small proportion of the surplus cotton shipped abroad through this port can hardly be materially increased. It should be possible, however, to increase this city's share of exports of horned cattle and tallow. The vital point, however, is in the export of breadstuffs, of which New York exports but two-fifths of the total sent out of the country. It is likewise plain, in view of the table last shown, that New York's prominence as a port of export must depend much more than has heretofore been fully recognized on such economies and efficiencies in the handling of breadstuffs for export as will draw grain here in the face of special concessions offered by rival domestic ports.

LOCAL GOVERNMENT AT PHILADELPHIA.

I.

The Committee of One Hundred at Philadelphia have gone to work with renewed energy to bring about further reforms in the government of that city. Their efforts have already been successful both as to getting rid of bad men and the adoption of correct principles. The point to be dwelt upon now is that the true safeguard against a return of bad men is to pursue to the full the correction of systems. The questions pending solution in Philadelphia are of paramount interest to the entire country. If beneficent results obtain there through well understood causes the way will have been marked out for other cities. The general interest attaching to the situation in Philadelphia induces us to call up more closely than BRADSTREET'S has heretofore done the course of that city's treasury—the index of its official life. The facts in this and the articles to follow are taken from two lectures given last April before the Political Science Department of the University of Michigan by Mr. William F. Ford, of New York.

In considering the financial history of Philadelphia it will be necessary to keep in mind the neglected truth that the principles relating to the conduct of public business are in no whit different from those having to do with the money-drawer of the individual. The salient feature in the history of Philadelphia's treasury has been the use made of the funding or borrowing system and the effect of such use, as the years came and went, upon the direction of the city's affairs. As regards the extent to which the funding system has obtained in the government of American cities, Philadelphia is not alone, save as its history brings clearly into relief the effect of a distinct attempt to regulate the use of the borrowing power by statutory devices. Besides, from an early date until now the affairs of Philadelphia have been directed by a local legislature or city council. Before outlining the course of Philadelphia's treasury and the lessons to be drawn therefrom a brief reference to the origin of the funding system is of value. In ancient times the kings of Europe were wont to accumulate treasure to meet the extraordinary expenditure necessary in time of war. With the growth of industry and commerce the ordinary outgo of the state became fully equal to its ordinary income, so that to carry on war the kings were obliged to anticipate the revenues of several successive years. In other words, having stopped the practice of saving, they were forced to borrow from the hoards of individuals. Loans were at first made for a definite term of years on the pledge of particular taxes. The ease with which funds were in this way procured for carrying on war led prodigal ministers to rapidly extend the system of anticipation. And thus the taxes or funds, which were at first adequate for the payment of both interest and principal, were scarcely sufficient to meet the interest charges. It was then that the return of the principal sums borrowed came to be deferred indefinitely, and national borrowing, which was once dependent on the pledge of particular funds, by a strange transposition came to be known as the funding system. At this juncture, when kings and ministers became alarmed at the insidious character of the mode of borrowing they themselves had instituted, it was sought to devise and introduce checks against their own prodigality. To this end the bookkeeping contrivance known as the compound interest sinking fund was introduced. As outsiders grew rich through dealing in the funds, the ministers of finance conceived it to be possible for the government to facilitate the reduction of debts by becoming an investor and speculator in its own promises. The money-changer's vocation as a distinct calling was comparatively new. The potency of compounding the interest on a given sum first came at that time to be appreciated. Naturally, its effect was exaggerated, and came to be regarded as in some degree magical—so much so, indeed, that the necessity of maintaining a surplus revenue for the reduction of debt came to be overlooked, as it was thought that debt could be reduced through the government's lending money to itself at compound interest. As is well known, the scheme consisted in the purchase by the state of parts of its outstanding obligations at regularly recurring periods in the open market. The interest on said purchases was, so to speak, to be paid by the state to itself to swell the fund for additional purchases of stock. In this way an enormous fund was to accumulate through the compounding of interest—the fund itself to consist entirely of redeemed portions of the nation's obligations. The extent to which the absurdity of supposing that a nation could facilitate the reduction of debt by lending money to itself was carried is perhaps best illustrated by the following extract from one of Dr. Price's later pamphlets: "The truth is that by borrowing only any amount of debts (including the sums borrowed) may in time be discharged by a sinking fund never diverted. It is, therefore, of little consequence what interest the sums thus borrowed carry. The higher the interest the shorter is the time of redemption, and the greater the efficiency of a sinking fund." It is unnecessary to dwell upon the extent to which the English public was deluded through the adoption of the sinking fund jugglery. Regarding the part which the borrowing system has played in the financial history of Philadelphia, it should be noted that its history in this respect is fairly typical of that of cities in the United States generally.

A transcript of the yearly balance-sheet of the Quaker City bearing date June 1, 1792, being for the fiscal year ending on the date given, shows that the year was entered upon with a balance in hand of £70 2s. 3½d.; that the receipts from taxes during the year were £8,650 odd; that the receipts from markets, wharves, street-sweeping, etc., were some £2,671. Among other items were two years' rent of the President's house "to reimburse the corporation for certain advances," and a payment of cash from the Pennsylvania treasury "to repay the expenses of accommodating Congress." After uniting the expenditures of the year there remained a balance in hand of £973 3s. 7½d. As Philadelphia had then a population of some 45,000, this balance-sheet may fairly be regarded as that of a full-fledged city. The suggestive feature about it is that at the date given the borrowing system had no place in the city's finances. The outgo of the year did not contain a penny on account of interest on money borrowed to meet the expenses of previous years. The city did an exclusively cash business in 1792. Its accounts were easily understood, and its affairs were conducted in a business-like manner. But even at this early date the seductive nature of the funding system had begun to have its effect in Pennsylvania. Philadelphia did a cash business and was happy, but there were those who argued against the folly of paying as you go. The following from a writer of the time illustrates the sophistry which had begun to obtain: "In free governments public credit is not only necessary in a higher degree, but more dependent on a strict adherence to system in matters of finance than in those that are more despotic. * * * Public credit, therefore," concludes this writer, who frowned upon the cash method of Philadelphia, "is public wealth. Again, it is not only the surest, but, prudently managed, the least burdensome resource the government can rely upon." Borrowing was always to be prudently managed. As regards the debt of the United States then existing, this writer advised that a sinking fund "might easily be raised without additional burdens on the people which in a few years would redeem the whole capital." This superficial and delusive philosophy speedily took root. Soon afterwards the city of Philadelphia found the construction of public water works a necessity, and the corporate authorities proceeded to raise

the money therefor by loan. The first considerable loan made by Philadelphia was in 1799. Water was first thrown into the city from the Schuylkill in 1801. Other loans followed, and by 1807 the city fathers were advising together regarding the best means of reducing debt. It should be noted that up to this period, or up to the resorting to the loan market for funds, the business of the city was conducted in a straightforward manner, and the mode of accounting to the taxpayers for money expended was easily understood. The tax levy of a particular year was practically collected within the year of its imposition, and as the city only got goods in exchange for cash, and only got cash in exchange for tax receipts, it was necessary to make ends meet. The management of a city's affairs in this business-like manner was only possible when in the hands of sagacious men of business, and for the most part such men only were at the front. From 1800 the borrowing business gradually obtained a stronger and stronger hold. The striking fact about the origin of the loan business as the distinctive feature of Philadelphia's finances is that the possession of a general credit in the money market was assumed as something inherent in the nature of a municipality. This, while so dangerous a power, has not been held to be inherent in a municipal corporation by the courts of England to this day. In view of the loose construction of the powers of Philadelphia's corporation in 1800, it is interesting to note that William Penn, when granting the original charter of the city in 1701, recorded therein the following words: "And I do grant that this present charter shall in all courts of law and equity be construed and taken most favorably and beneficially for the said corporation." The effect of the Revolution was to entirely supersede this colonial charter, but it may be asked whether the philosophy laid down by Penn did not continue to have its influence. So generally was borrowing assumed to be a rightful inherent function of a municipality that in 1799 a Philadelphia taxpayer, in vainly seeking protection from the courts against the collection of a tax to meet the interest on the water loans, neglected to point out to the court that the city had no such inherent power, and that therefore both bond and tax were *ultra vires*. Indeed, he merely rested his case on the point that the city authorities had no power to go beyond pumps and wells in supplying the city with water, and "were not authorized to try experiments with steam engines." Such was the law of municipal bonds in Pennsylvania in 1800. The law to-day, as laid down by Justice Bradley, of the United States Supreme Court, is as follows: (Mayor vs. Ray, 19 Wallace) "The power to borrow money does not belong to a municipal corporation as an incident of its creation. To be possessed it must be conferred by legislation."

The philosophy which quickly obtained in the minds of the authorities of Philadelphia is well illustrated by a set of resolutions laid before the common council in 1806 by a member of the majority party, of which Matthew Carey was a leading spirit, declaring, among other things, as follows:

Resolved, That a moderate funded debt of small transferrable shares in a commercial and manufacturing city is a public advantage to a greater amount than the interest payable on such debt, inasmuch as it brings into activity and use small sums of money which, without such funds, would lie idle; that it adds so much as the amount of such debt to the circulating property of the city, thereby contributing to the life, prosperity and advantage of it; and that it gives great convenience to many citizens who cannot follow business and may have small sums to spare to put the same to profitable use.

Resolved, That if the interest of the funded debt of the city continues to be—as it always ought to be—faithfully and punctually paid it will enable the city in the future to command any object which it may be for the interest and advantage of the city to possess without resorting to an increased rate of taxation.

It is not learned whether this declaration of opinion actually passed the common council. It is certain, however, that the resolutions represented the controlling opinion of the time in Philadelphia. From the records it is probable that Matthew Carey was their author. As stated in the following year, the city fathers set about formulating a scheme of debt reduction. The scheme was the compound interest sinking fund. The ordinance of the Philadelphia councils instituting the fund had as a preamble this judicious statement: It is desirable that the reduction and payment of the debt due from this city shall be affected as speedily as circumstances permit. Pitt's famous fund was to prevent the inconvenient and dangerous accumulation of debt. Recall for a moment that it was in 1807 that checks were provided by the British Parliament against a dangerous accumulation of Pitt's fund, and consider that the Philadelphia councils decided in the same year to appropriate $5,000 annually to secure a reduction of debt, and this without seeking to discover whether any surplus revenue existed for such a purpose. It is significant that on the very day of the approval of the sinking fund ordinance there appeared in *Poulson's Daily Advertiser*, a Philadelphia newspaper, an article from a Liverpool journal giving an account of the parliamentary system of checks referred to above. The article was entitled "A New Plan of Finance." It is plain that the Philadelphia councils had caught the infection of the English scheme, as, almost immediately after $5,000 had been appropriated to the fund for the reduction of debt, a new loan was authorized for $50,000.

OCCASIONAL NOTES.

There appear to be some differences of opinion among glass manufacturers in regard to the effect of the tariff upon their particular industry. The Philadelphia *Press* recently published interviews in which these differences were brought into relief. One of the prominent manufacturers interviewed, Mr. Thomas B. Atterbury, at Pittsburgh, was quoted as being in favor of free trade in glass, believing it to be for the interests of the manufacturers to have no tariff at all. He said that when production was light and freights high the protective tariff was a real benefit, but that by this time fast freights and the cheap labor of Europe have taken away so much of the trade of the western manufacturers as to cause the gravest alarm. He gave it as his opinion that as matters now stand protection does not protect, and that there will be no revival in the iron and glass trades until they are rid of tariff restriction altogether. With no tariff, he said, equitable rates of pay for labor can be obtained, and American manufacturers will have an opportunity to regain and develop their trade with South America, the West Indies, Australia, China and Japan. The *Press* submitted Mr. Atterbury's opinions to other glass manufacturers in New Jersey and elsewhere, and has published the comments of some of these. They concur in the belief that a tariff is necessary for the protection of the glass-making industry and that the present schedule of rates is not high enough. These latter manufacturers represent the eastern (*i. e.*, east of the Alleghanies) section of the trade, where business is good, while Mr. Atterbury is from the western section, where the state of the industry is unsatisfactory. The interviews afford no means of judging as to the merits of the varying opinions, but the fact that so fundamental a difference exists is noteworthy.

The British Board of Trade has issued a report of its proceedings under the Weights and Measures act of 1878 for the past year. One of the most interesting points in the report is that relative to the comparison recently made of the English standard of length (yard No. 1) with the United States standard (yard No. 57). The examination was made by Prof. C. S. Peirce, of the United States Coast and Geodetic Survey, who went to London for that purpose, in June last, on behalf of Prof. F. E. Hilgard, who has charge of the Bureau of Weights and Measures at Washington. The result is curious as showing the extreme degree of accuracy attained in mechanical instruments in modern times. After a large number of comparisons made with all possible care it was found that at 62° F. the United States standard was longer than the one deposited at the office of the Standard's Department by .000022 of an inch. The accuracy of the standard kilogram in the British office was also tested by comparison with the French standard and was found to be 2.0178 milligrams or .03047 of a grain avoirdupois too light. Among the new measures referred to in the report those for the measurement of mechanical and electrical energy are deserving of particular mention, though it appears that no practical meter capable of use in commerce and daily life has as yet received official sanction.

The Western Linseed Oil Crushers' Association has just held its annual session at Chicago, some fifty mills being represented. The seed production of the west is over a million bushels short this season, and the east will therefore have to get a larger proportion of its supply than usual from India. An attempt was made to raise the price of crude oil from 53 to 55c., but it failed, the association taking the ground that regulating prices was no part of its functions. A bureau of statistics was, however, established and the standing committee were instructed to have an eye on tariff legislation. It was reported that the oil on hand was about 23,000 gallons to each mill. There are 52 mills west of Buffalo, the plants of which are worth $5,000,000 to $6,000,000. The demand for oilcake as food for cattle is rapidly growing. The sales of the Kankakee mills the past fall amounted to about 20 tons per day. The flaxseed crop is one of the most profitable, the product selling from to 25c. to 30c. a bushel higher than wheat, and the harvest can be got out of the way early enough to give place to wheat. It is one of the chief reliances of those settling on new lands.

The Iowa railroad commissioners in their annual report say that the earnings of the past year per mile are smaller than in former years, and express the opinion that in the thickly settled portions of the state the maximum of tonnage has been reached since freight is taking the condensed form of cattle and hogs. The small crops of the past two years have also contributed to the shrinkage. The carrying capacity of the roads is much in excess of the demand. The commissioners are strongly in favor of a national board to supply Congress with information. They think that pooling has caused a reduction of rates, but condemn high tariffs between noncompetitive points on the ground that industries are driven by them to the cheaper localities. They recommend the repeal of the law permitting towns to tax themselves for the aid of new roads. One member of the board in a minority report declares that pools have failed to accomplish their objects—steadiness in rates and security to railway properties. He urges the passage of laws prohibiting charging one person more than another for the same service or charging more for a short haul than for a long one. The mileage has increased from 4,157 in 1878 to 7,015 in 1883, and the capital and debt from $153,601,784 to $262,094,348. The net earnings this year were $1,654 per mile. The operating expenses were $2,315,057 greater than last year and the earnings $2,409,388 greater. Fifty per cent. of the rails, exclusive of sidings, are steel, against 22 per cent. in 1878.

The progress of the working classes in the last half century formed the subject of a recent interesting address by Mr. Robert Giffen, the president of the Statistical Society, before the Royal School of Mines in London. According to Mr. Giffen the material condition of the working classes has greatly improved during the last fifty years. By reference to the record of wages for that period the learned statistician discovered that in all cases where he had found it possible to make a comparison from the apparent similarity of the work there was an enormous apparent rise in money wages, ranging from 33 to 85 per cent., but even this he thought underestimated the real extent of the change. While the money wages of the working classes had thus increased their hours of labor had diminished. He was inclined to say that this diminution was very nearly 20 per cent. The workman of to-day receives from 30 to 100 per cent. more money for 20 per cent. less work—in round figures he has gained from 50 to 100 per cent. in money return in fifty years. In regard to changes in prices of commodities, the lecturer said that his researches led him to believe that prices were very much the same as they were forty or fifty years ago. On the whole he said the sovereign goes as far now as it did fifty years ago, while on the other hand there are many new things in existence now at a low price which could not then have been bought at all. The prices of special articles were found to be lower instead of higher than they were a half century ago. This was the case with wheat especially. Sugar and such articles had largely declined in price, and clothing was cheaper now than formerly. The increase in the price of meat, however, was considerable. The same was true with regard to house rents, these being now on the average one and a half times what they were fifty years ago. Mr. Giffen said that the increased price in one or two articles—particularly meat and house rent—was insufficient to neutralize the general advantages which the workman had gained.

The question still remained, said the lecturer, whether the condition of the masses had in fact improved. It was certain at least the people now lived longer than they did formerly. Mortality statistics conclusively established the fact that within the half century the average duration of life had increased two years. These statistics showed also that there was less suffering from sickness than formerly. The improvement was doubtless in great part due to better and more abundant food. A comparison of the statistical abstract from 1840 and 1881 showed a remarkable increase in the principal imported and excisable articles retained for home consumption. As an instance, the consumption of tea and sugar is now four times what it was forty years ago. Educational facilities had greatly increased within the half century. The number of children in average attendance at school has multiplied more than tenfold in thirty years, the figures being 239,000 in 1851 and 2,863,000 in 1881. Crime has largely decreased, if the records may be trusted. Since 1849, too, pauperism has shown an absolute decline in the face of an increasing population. A similar comparison applied to savings banks and provident coöperative societies yielded like results.

Mr. Giffen said that a further point had been raised which deserved attention. The question was asked whether the working classes had gained in proportion with others by the development of material wealth during the last fifty years. Upon this point he said there was much misconception. He found that, allowing for the increase of population, the growth of capital and income were really not greater than the growth of the money income of the working classes. There had been an enormous increase of property as a whole during the period under review, though there had been no sensible increase in the amount of property per estate. The capitalist classes had increased in number, the increase in the number of estates being far more than double. The increase of capital per head of the capitalist classes had been only 18 per cent. in England and 14 per cent. in the United Kingdom. The lecturer arrived at the conclusion in short that the working class had not been losing in the last fifty years through the fruits of their labor being increasingly appropriated to capital. On the contrary he thought it would not be far short of the mark to say that about the whole of the great material improvement of the last fifty years had gone to the masses. Mr. Giffen's paper is likely to give rise to a considerable amount of discussion in view of the general discontent of the working classes in England notwithstanding the increase in their material prosperity which Mr. Giffen declares to have taken place.

The San Francisco branch mint is coining $1,000,000 in silver for the Hawaiian government from dies manufactured in this country to its order. This is the first coin ever struck for the Hawaiian government. The coinage of standard money at the San Francisco mint during November aggregated $2,832,500, of which $2,220,000 were in double eagles, $212,500 in eagles and $400,000 in silver dollars. The specie imports for November aggregated $1,499,444; exports, $949,843, of which $865,395 went to China and $58,000 to Japan. But

for the importation of gold from Australia, amounting to $600,000, the balance would be in favor of export.

The wholesale importation of Chinese coolies continues at San Francisco, where apparently the Restriction act is of no effect. Fraudulent certificates are issued by Chinese officials in Canton, and when the holders of these certificates admit the truth and are thereby prevented landing, affidavits are manufactured in the Chinese consulate setting forth that Ah Sin, or Chang Hi, as the case may be, is a relative of deponent, who intends setting him up as a trader or merchant. Writs of habeas corpus are then sued out, and the district judge railroads them all ashore. In this way the law of Congress is nullified by the district court, and a feeling of disloyalty and discontent is fostered on the Pacific slope. It does seem strange that the United States is the only country in the world which fails in everything it touches in which the Chinese are interested. As there are now between 7,000 and 10,000 unemployed Chinese laborers in British Columbia, we may expect to learn that the bulk of them have safely crossed the border in the early winter and are engaged in the congenial task of degrading free American labor.

The clearing-house returns of San Francisco for November exhibit an increase in exchanges of $5,110,334 compared with November, 1882. The total fell short of November, 1881, by $3,809,890. There was no speculation whatever last month except in grain futures. The trade has been conservative for some time past. The internal revenue collections for November exhibit a considerable decline contrasted with the same month in the two previous years, owing to the remission of taxes. The merchandise exports for November from San Francisco aggregated $4,929,043, of which $3,372,911 is credited to Great Britain, $299,942 to Hong Kong and China, $253,619 to Hawaii, $187,607 to Mexico, $112,980 to New York, $185,312 to Belgium, $100,912 to Australia and New Zealand. Germany stands lower on the list than Apia, a village in the Samoan group. Central America and Panama took rather over $100,000 in domestic products from San Francisco last month. France bought less than Australia or British Columbia. The great consumers of American products are men of the Anglo-Saxon race wherever located.

SPECIAL CORRESPONDENCE.

THE GRAIN TRADE AT ST. LOUIS.

St Louis, December 7.—Grain receipts at this market, from January 1 to December 1, this year, and for the corresponding period last year, have been and were as follows:

	1883—*Bushels.*	1882—*Bushels.*
Wheat	12,904,709	18,275,106
Corn	17,421,658	12,181,905
Oats	5,805,306	7,414,775
Rye	428,551	348,501
Barley	2,689,627	1,433,100
Totals	39,249,851	39,653,387

Here appears a remarkably close equality in the aggregate receipts of all grains during the two periods, a large decrease of wheat receipts and an almost equally large increase of corn receipts.

The receipts of wheat and corn for five previous years were as follows:

	Wheat, bushels.	*Corn, bushels.*
1878	14,326,431	9,009,723
1879	17,093,362	13,360,630
1880	21,022,275	22,298,077
1881	13,243,571	21,259,310
1882	20,774,987	14,541,555

This shows that the wheat receipts for 1883 are sure to fall considerably below the average of the six years, and that our corn receipts are already a good deal above that average.

There is no way of determining what percentage of the St. Louis grain which goes eastward by rail is exported from the Atlantic coast. It is believed that about all the wheat which has this year gone eastward from here has been taken by the mills of several eastern states. The facts that normal railway rates are about 18c. per bushel on grain shipments from here to New York, while barge rates to New Orleans are only about 6c. per bushel, and that normal ocean rates are an average of nearly 25 per cent. higher from New York to Liverpool than from New Orleans to the same port, would seem to give sufficient assurance that St. Louis grain exports have gone down our river.

What our grain exports by New Orleans have been is shown by the following statement, which compares eleven months of 1883 with all last year:

	11 *months*, 1883. *bushels.*	*Sacks.*	1882, *bushels.*
Wheat	1,276,673	.....	5,637,391
Corn	7,855,765	98,253	2,529,712
Oats	358,126	306,525	150,320
Rye	167,432	80	15,994
Totals	9,657,996	404,808	8,333,417

Our river shipments of grain for export via New Orleans in the five previous years were:

	Wheat, bushels.	*Corn, bushels.*	*Total, all grains.*
1882	5,637,391	2,529,712	8,333,417
1881	4,197,981	8,640,720	12,993,947
1880	5,913,272	9,804,392	15,762,664
1879	2,390,897	3,585,589	6,164,838
1878	1,876,639	2,857,056	5,451,603

The two last tables make it apparent that, though the more valuable wheat exports have badly diminished and are far below the average, our corn exports for 1883 are already largely above the average for the six years, and the aggregate of all grains exported is also well above the average.

It needs no special sharpness to see that our barge lines must be having a better than average season. What they have failed to make by the decline of the wheat movement they have doubtless more than made up by the increased shipment of other grains. Just so it must be with all other branches of our export trade in grain, if the speculative element be excepted. Those most interested here in grain carriage by barge do not regard this as a discouraging year by any means.

Expert opinion in this city attributes the decline of our wheat movement down the river solely to the overstocking of foreign markets and to our farmers having held back for higher prices than would justify exporting. None attribute it to faults in the barge system nor to objections to the New Orleans route.

The stocks of grain on hand here December 1, last, were as follows:

	Bushels.
Wheat	1,892,158
Corn	300,029
Oats	76,822
Barley	122,817
Rye	96,425
Total	2,488,251

The stock of wheat is constantly increasing, and the year will probably close with a larger stock than ever before at the same date. The close of 1880 saw but about 70,000 bushels more wheat in our elevators than they contained the first of this month.

THE NEW NORTHWESTERN RAILWAY SYSTEMS.

St. Paul, Minn., December 10.—The best-informed minds conversant with the true inwardness of the railway situation of the northwest regard it as menacing to the present railway centers in this territory. Chicago's greatness is to be very largely attributed to her position as the terminal exchange point of the great system known as the eastern and western trunk lines. The lines east of Chicago have not dared to invade a mile of the territory of the west, nor have the lines to the west of Chicago dared to build a mile of road eastward. Had there been such invasion the equilibrium would have been destroyed, and a grand rush to the western seat of supplies by the eastern lines would have been the inevitable result, for any such bold move by one of the number would have forced all to like action in self-defence. The even balance of power between the two systems centering in the Lake City has made Chicago the marvel in city-building of the nineteenth century. In much more limited proportion St. Paul and Minneapolis have been feeling in the past few years the impulse of such a terminal exchange system here. With the Chicago, Milwaukee & St. Paul, the Chicago & Northwestern (or Omaha line) making this the terminal exchange points for the Northern Pacific westward and the Manitoba northward, the growth of the dual cities has been phenomenal in the past three years. The Chicago, Milwaukee & St. Paul, exceedingly aggressive and regardless of what is accepted as apportioned territory, has by its Hastings & Dakota division and by its southern Minnesota extensions been gradually creeping northwestward, greatly to the discomfiture of the two northern powers. As its movements north Dakotaward by its Allandale branch have given rise to much apprehension, suddenly a new Richmond appears in the field, presumably of Fargo capital and headed by Mr. H. B. Sargent, late general manager of the Northern Pacific. The Fargo Southern Company, with celerity of movement indicating a bank account imported for the occasion, is crowding with might and main from Fargo toward Ortonville in Minnesota. Immediately President J. J. Hill, of the Manitoba Railroad, calls on General Manager Merrill to know if the St. Paul line has any interest with the Fargo Southern. A most unqualified negative response from the St. Paul Company quiets for a time the fears of the northern line (the Manitoba), but later it is discovered that General Superintendent Pryor, of the Northwestern Division of the St. Paul, has staked out a side track at Ortonville for connection with this sphinx route. General Manager Merrill comes to St. Paul, and, when driven closely to an explanation of his peculiar movements, is forced to confess that several stockholders of his company furnished the bank account for the sphinx route. A great flurry ensues. Suddenly Manitoba stock drops 10 points despite limited transactions, and to the merchants of St. Paul and Minneapolis a painful rumor is floated that President Hill is busy arranging terms of sale of the Manitoba line to the St. Paul Company. The painfulness of the rumor consists of the self-evident fact that if such sale should be perfected the Chicago & Northwestern will be compelled in defense to invade the Red River valley, and then the two cities will be left as way stations, and Chicago would feed on their lost fatness. It is difficult to see, even granting that the rumor is untrue, how this bone of contention can be removed. The chief hope lies in a line to Sault Ste. Marie, connecting there with the Canadian Pacific, and giving this section an outlet to northeastern points 300 miles shorter than via Chicago and 600 miles nearer to Europe. If the Manitoba & Northern Pacific should take this horn of the dilemma and act promptly on it, then there will be witnessed a reverse of the present system, and an invasion of southern Minnesota and southern Dakota by these northern lines, making the Sault Ste. Marie route a rival of the Chicago systems. Aside from what is charged as perfidy by the St. Paul in building on the sly the Fargo Southern is the threatened invasion to the west of us of this same northern territory by the cable systems, practically the Rock Island and the Minneapolis & St. Louis, that are preparing for northwestward extensions. The Minnesota Central is crowding up the Chippewa valley in Wisconsin, and the Burlington, Cedar Rapids & Northern is advancing north from Worthington in Nobles county—all of these fostered if not owned by the Rock Island. Still farther to the west a branch of the Wabash, known as the Des Moines Narrow Gauge, is at once to be widened to standard gauge, and now resting at Fonda, on the Illinois Central, is looking northward with evident interest for next year. Nothing short of a financial spasm to withdraw many from the support of these invading lines can avert a great change in the general railroad situation in this northwestern country in the coming twelve months. Whatever the issue may be, the present is not prophetic of good to the dual cities as trade centers, and the shrewdest far-seeing minds are strongly of conviction that the eventual outcome will be the establishment of giant rival systems, the Chicago lines on the one part, and the Sault Ste. Marie line on the other, with an unquestionable future for Duluth or some other similarly well situated city at the head of northern water navigation, and the gateway to what is fast becoming the wonder-land of the United States—inexhaustible in its resources, and being developed in rapidity without a parallel. The present visit of Mr. Hill to New York is regarded with great interest, especially as it has been prolonged by an alleged "gunning" expedition into North Carolina. The question is, is Mr. Hill Napoleon enough to help build the Sault Ste. Marie line and take upon himself the burden of one of the greatest fights in railroad history, or will he succumb to the St. Paul and sell out the Manitoba? Indications point to the latter.

NEW ZEALAND AFFAIRS.

San Francisco, December 4.—The City of New York arrived late on the 29th ult. from Sydney and Auckland via Honolulu, and will be taken permanently off the Australian service, which hereafter will be performed by the two Scotch boats on the line and the City of Sydney, belonging to the Pacific Mail Company. It is regrettable that this company has not ships of its own to perform the contract mail service with Australia. The company's ships are faulty in construction, being too short for the beam, and are nearly always breaking some part of their machinery. This is attributed by those who are disloyal to the tariff to the fact that the practical monopoly in iron ship-building for long enjoyed by Roach induced him to make money at the expense of the national reputation in ship-building, and that neither honest iron nor honest work were put into his ships. The history and cost of the City of Peking and City of Tokio, in the China trade, and of the two ships in the Australian trade, are pointed to in support of this charge. Be this as it may, the fact remains that the greatest of American steamship companies is unable to fulfill its own contract with foreign governments, and must charter foreign ships; and furthermore, were it not practically guaranteed a monopoly of the Panama and San Francisco trade, it would soon be run off the high seas through the expensive inutility of its entire fleet. This by way of preliminary. It is not the fault of the Pacific Mail Company, but of the law, which compels it to pay two prices for an inferior article or go out of business.

A Dunedin correspondent writes: "I never knew things looking so quiet and depressed as they have been during the past six months. The principal causes, I think, are overimportation, overspeculation, and the stringency of the money market, owing to the banks having lent out large sums of money for long periods in flush times, more especially in Queensland runs. The one bright spot has been the extraordinary success that has attended New Zealand mutton. We have beaten all competitors now in that line. Australian mutton is nowhere, because Australia cannot grow turnips, and without turnips you cannot raise the 75-pound half-breeds which seem to take the English fancy." The writer is a gentleman of large property engaged in monetary and pastoral pursuits, and understands all that is going on in Australian and New Zealand business centers.

Referring to the frozen-meat trade, which has such a direct bearing upon American food production, it should be stated that it is not two years since it was first mooted. Already 147,133 carcasses of sheep have been exported, while 15,000 additional carcasses are under process awaiting shipment, and engagements have been made for the conveyance of at least 200,000 carcasses during the season of 1884. This, then, is the measure of opposition to America which New Zealand will give next year in this line; but it will also export butter, cheese, fish and fresh vegetables in refrigerators in large quantity, the enterprise of the colonists having practically bridged over the 13,000 odd miles between New Zealand and England. The shipment of beef and mutton from Australia must also be added, for although inferior to New Zealand meat, it is still equal to anything America sends. And this leads me to note the opening of a new and extensive market to the Queensland stock raisers. The Queensland Frozen Meat Company has established refrigerator warehouses at Batavia, in the island of Java, which are supplied by steamer from the colony. The demand is very brisk, especially among natives, Arabs and Chinese, who daily throng the neighborhood of the storehouses in their eagerness to buy Queensland beef. The company is making arrangements to open depots in Batavia, and supply customers at their houses by means of meat carts.

If these facts point to anything they point to an ultimate displacement of American canned meats in the Orient, and it should be noted that the Auckland (New Zealand) Frozen Meat Company, to which I referred in a late letter, is going into the canned meat business on an extensive scale, having bought all the appliances in Chicago. It has also ordered the duplicate of an ice machine in use in San Francisco to be built here by the Risden Iron Works as part of its general outfit. This will be the second machine of the kind in use. It is by far the most efficient, and makes artificial ice quite as good and a great deal cheaper than natural ice can be delivered for. It is an American patent. Mr. Lloyd Tevis controls the ice company here which operates the machine. It is manifest, however, that when fresh carcasses can be marketed they will displace the more expensive and less satisfactory canned meats.

The New Zealand frozen meat trade is stimulated by direct steam communication between the colony and London. The New Zealand Shipping Company has a fleet of new steel steamships on the line fitted up with refrigerators, and Shaw, Laville & Co., of London, are building powerful fifteen-knot steamships for the same trade. These vessels bring out nominated government immigrants, saloon and second-class passengers. Population is pouring into New Zealand in larger numbers than to all Australia combined. The Dunedin correspondent above referred to writes: "Our direct steam service is doing wonders. The Ionic went home crowded in forty-three days via the Straits of Magellan, and the British King in forty-one days. These two steamers took over 24,000 carcasses of sheep. You had better stir up the Pacific Mail Company to make better time. The Orient Company has secured the Sydney mail subsidy for a fortnightly service—contract time thirty-nine days. If the Pacific mail service is to be continued with a subsidy the contractors must do something to earn it. This direct service costs nothing by way of subsidy, and the time noted by me will be reduced." These facts are pregnant, and should be considered by Congress, which will be in session before this appears in print.

New Zealand has about reached the limit of borrowing, and is going in for civil service retrenchment. The trouble is that all Australian governments have duplicated the British system, and are carrying on machinery fitted for an empire, instead

of what in the United States would be administered by a territorial government.

A small band of pure Australian merino sheep came up by the City of New York. The gold import amounted to $600,000.

POINTS OF INTEREST FROM THE SOUTH PACIFIC.

Sydney, November 1.—Business has been depressed for the past month, as, indeed, it has been almost everywhere throughout the colonies for the past half-year. But mercantile and industrial interests are slowly recovering from the inflation of credit caused by the banks encouraging overtrading and land speculation. The pinch has been, perhaps, more severely felt in Queensland and South Australia than in New South Wales and Victoria, but the last named have also been in a tight enough place. Discounts remain unchanged, the banks pursuing a strictly conservative policy now the mischief has been done.

Breadstuffs are lower, owing to the promise of an abundant harvest in all the colonies. Imports have fallen off, and stocks are being slowly reduced. Wool has not maintained its elasticity, concessions being made to buyers. This remark applies to the Melbourne and Sydney series of wool sales. Wool from the Riverina district is burry, and does not compare favorably with last year's clip. There is a good demand for scoured fleece; best quality, 18d. to 19½d.; medium, 13d. to 16d.; best greasy, 10d. to 12½d. The Queensland sugar crop will be large. There have been heavy exports of sheep and cattle products, copper, tin and mother-o'-pearl to England. The steamship Teviotdale takes 9,163 carcasses of sheep, and the John Elder has cleared with 1,840 additional carcasses. This fresh meat export promises to be important, although Australian mutton does not fetch as much as New Zealand carcasses in London.

South Australia has added £3,000,000 to its indebtedness, and while its expenditure on public works lasts there will be a business boom in Adelaide, but the inevitable tax collector will follow, and those who revel to-night must sober off in the morning. It would be a blessing were the borrowing power of all the Australian colonies at an end. They might then stop to consider ways and means, and settle down to sober business.

Extensive harbor improvements are in progress at Melbourne. A deep-water channel is being dredged at heavy cost, by which vessels of the deepest draft may go up to the city. The new graving dock is also to be lengthened 150 feet. These are great and enduring public works, which are called for by the exigencies of commerce. Railroad construction is also in progress in all the colonies.

The land bill before the New South Wales legislature is creating a good deal of discussion among the pastoral tenants, who have had it all their own way under the old law. The evils of "dummying" became unbearable, the law being systematically violated by capitalists and speculators, who suborned perjury to perfect their titles. It is surprising that so much rascality should go unpunished.

Despite the refusal of Earl Derby, the Secretary of State for the Colonies, the annexation movement has assumed proportions which the Imperial government cannot check. Instead of being awed by Imperial opposition the colonies have convened a conference at Sydney, composed of delegates from the various governments, who will consider among other things the question of Australasian federation and the annexation of New Guinea and other islands in the Pacific ocean between it and Samoa.

Before this letter can appear in BRADSTREET'S this colonial federal conference will have assembled. It will be the first step toward independent national existence, and in some respects will occupy in history a similar place to that of the first Continental Congress of America, of which the Congress of the United States is the legitimate successor. But the advisers of the crown are wiser in their generation to-day, and will not alienate the affections of the Australian colonists. This is evident from the fact that Lord Derby has reluctantly sanctioned the representation, in the Australian conference, of the two crown colonies, Fiji and Western Australia. Fiji is in favor of federal union, and the governor of that colony, Sir William De Vœux, High Commissioner of the Western Pacific, has declared that in his opinion the colonies will succeed in their aims, as he thinks they certainly should. The Dutch Indies favors our annexation of the unclaimed part of New Guinea, when the Netherland's government would hold the northern and England the southern part.

The Melbourne *Argus* sent an exploring expedition to New Guinea. It has returned owing to the prevalence of fever. The explorers report the discovery of a very fertile country not far from the coast, occupied by people who have made considerable progress in civilization, but who had never before seen the face of a white man. They cultivate the soil, which is very productive. The country is well watered, extremely picturesque and eminently fitted for industrial occupation by Europeans. It also opens an interesting field for botanical research, many new plants having been discovered. The inhabitants have a well-defined land system. The Melbourne *Age* also sent an expedition to New Guinea, which pushed into the interior and has not been heard from.

As the French Chambers have passed the Recidivist bill, it is now clear that France intends to send all its hardened criminals to New Guinea, New Hebrides, New Ireland, and other Melanasian islands. This the Australian colonies will not only not consent to, but will forcibly resist, and Great Britain must do its duty in the premises or permit the colonists to do the work themselves. France will soon discover that Australia is not Madagascar by long odds. The scheme of the French government is to make a clearance of all its criminals, male and female, and establish them in the South Seas. If there are not sufficient female criminals as consorts for the males, the number is to be made up from the ranks of prostitution. This policy would prevent the industrial settlement of those islands, and would lead to a criminal overflow upon the opulent British colonies. Annexation is therefore a measure of self defense. Queensland now suffers greatly from its proximity to New Caledonia, the governor of which never applies for the extradition of any of the numerous escapes from the Isle of Pines.

AFFAIRS IN CANADA.

Ottawa, Canada, December 11.—The reference made in the President's message to the desirability of creating a commission to consider the general question of opening to the citizens of the United States, under just and enduring conditions, the fishing waters and sealing grounds of British North America has already started the Canadian press into speculating on the value of the fisheries and the concessions they will demand of the United States government before any proposal to keep them open to American fishermen would be entertained.

Not a few see in it an opportunity for negotiating a reciprocity treaty. Others, a little more ambitious, hope to use it as a lever to change the international boundary line, moving it far enough south to take a large slice off the New England States, which they claim geographically belong to the Dominion.

On the other hand there is an element, long since grown out of its infancy, which would prefer to see the 49th parallel extended to the Atlantic ocean as the international boundary.

What the United States would gain in opening its markets to Canadian natural products and manufactures it is difficult to realize. Such a treaty a few years ago might have been arranged on a fairly equitable basis. Now, however, that in almost every line of manufacture Canada is burdened with a surplus stock that it is impossible to get rid of, such a treaty would throw into the United States the residue of Canadian products to compete with home manufacture.

It has been proved beyond all doubt that manufacturing can be carried on in Canada cheaper than in the United States. Rents are lower; the cost of living is fully 25 per cent. under what the United States operative pays, and consequently he is able to work for smaller wages. All efforts, so far, to secure a slaughter market for Canadian goods have failed, although for some time past negotiations have been carried on with a view of securing commercial treaties with Brazil, Cuba, Jamaica and France. There is not a week passes by without recording the failure of some large manufacturing industry, or the discharge of operatives on account of overproduction, without a market in which the surplus may be disposed of. It is a well-admitted fact by protectionists, the manufacturers themselves, that the present capacity of many Canadian factories is large enough to meet the home demand and supply a country with a population of twenty millions of people in addition.

One does not require to look far for evidence in proof of these assertions. A newspaper of yesterday's date, in speaking of the Brantford factories running on short time, says: "The labor market in this city is at present in a far from satisfactory condition, and hard times are experienced on all hands. A few days back a meeting was held of the leading manufacturers, when it was decided, in view of the existing state of business affairs, to run short time in all the factories, commencing this week." In several of the factories wages have been cut down 10 per cent. A number of the discharged have left for the United States. The same contains the following dispatch from Belleville: "The new woolen factory at Campbellford is closing down and throwing 300 operatives out. The ladies of that place are organizing relief."

Turning to the labor market generally, there has been a large reduction in wages as compared with prices paid last year. Owing to the large amount of lumber to be carried over this winter, estimated at 40 per cent. over that held last year, there will be comparatively little done in the woods.

The number of men sent into the timber limits this winter is 30 per cent. less than last year, while wages have likewise been reduced. Timber makers this year receive only from $30 to $40 per month and board against from $40 to $50 last year. The business outlook gives no indication of better times. In fact, everything points to a year or two of commercial depression. The revenue statement for the last five months shows a falling off equal to 8.5 per cent. as compared with the corresponding period of last year, while the expenditure increased over 6.6 per cent.

The following shows the revenue and expenditure of the Dominion during the months of November, 1882 and 1883, as well as for the five months ending November 30:

	Nov., 1882.	*Nov., 1883.*
Customs	$1,820,316.16	$1,612,870.44
Excise	651,898.84	508,722.74
Post office	107,048.82	149,081.04
Public works and railroads	318,481.79	324,801.15
Miscellaneous	166,326 51	169,319.81
Total for November	$3,097,072 08	$2,765,695.18
Collected from July 1 to Oct. 31	12,487,761.14	11,490,387.09
Total	$15,584,833 22	$14,256,082.27
Expenditure from July 1 to Nov. 30	11,004,522.94	11,738,411.12
Surplus revenue	$4,580,310.28	$2,517,671.15

While the country was in a fairly prosperous condition the effect of excessive taxation was not so keenly felt. Now, however, that the trade has turned the demand for tariff reform comes from every direction.

The following table shows the amount of revenue collected and the expenditure during each fiscal year since confederation:

	Revenue.	*Expenditure.*
1867-68	$13,687,928	$13,485,092
1868-69	14,379,174	14,038,084
1869-70	15,512,225	14,345,509
1870-71	19,335,560	15,623,081
1871-72	20,714,813	17,589,468
1872-73	20,813,409	19,174,647
1873-74	24,205,091	23,316,315
1874-75	24,648,715	23,713,671
1875-76	22,587,587	24,488,372
1876-77	22,059,274	23,549,301
1877-78	22,375,011	23,503,158
1878-79	22,517,382	24,455,381
1879-80	23,307,406	24,850,634
1880-81	29,635,297	25,502,554
1881-82	33,383,455	27,067,103
1882-83	35,888,334	28,805,229

The startling rate at which Canada is building up a national debt is already beginning to influence the credit of the country in the money markets of the world.

It is not long since that the Minister of Finance advertised for tenders for a loan of $4,000,000, bearing 4 per cent. Believing that he would experience no difficulty in floating his Dominion stock after $1,000,000 had been taken up at par, the balance was held at a premium of 2½ per cent. The bait was not tempting enough to find takers, and the greater part of the stock yet remains to be issued. This is rather discouraging to the Minister of Finance, who but a short time since stated that he would be able to negotiate a heavy loan, which will be required during the coming spring, at 3½ per cent.

The following statement shows the public debt of the Dominion on July 1 of each year since confederation in 1867, up to July 1, 1882; also the assets of the Dominion on the same dates:

Year.	*Amount of debt.*	*Assets of the Dominion.*
1867	$93,046,051	$17,317,410
1868	96,896,666	21,139,531
1869	112,361,998	36,502,679
1870	115,993,706	37,783,964
1871	115,492,682	37,786,165
1872	122,400,179	40,213,107
1873	130,778,098	30,929,636
1874	141,163,551	32,838,586
1875	151,663,401	35,055,023
1876	161,204,687	36,653,173
1877	174,675,834	41,440,525
1878	174,957,268	34,595,199
1879	179,483,871	36,493,683
1880	194,634,440	42,182,852
1881	199,801,537	44,405,757
1882	205,365,251	51,703,601

What is the result of the foregoing statements compiled from government returns? It is that within the past five years $30,407,983 have been added to the debt of the Dominion, an increase of over 17.3 per cent.; it is that within the past five years taxation levied by the federal government alone has increased $13,370,932, or over 59.3 per cent. This has no reference to direct taxation for municipal purposes. Is it then surprising, in view of these indisputable facts, that Canadian stocks and securities of every character should suffer depreciation when placed in the market, or that the tide of emigration should be turned from a country that a few years more may see hopelessly bankrupt through bungling and extravagant administration.

LETTERS TO THE EDITOR.

CORPORATE MONOPOLY AGAIN.

To the Editor of BRADSTREET'S.

SIR—Since the date of my last letter a correction has been made in the report first published regarding the arrangement for the division of earnings between the Northern Pacific Railroad Company and the other corporations interested in the traffic between the east and the Pacific coast. As at first telegraphed, it was the payment of a round sum of $500,000 a year to the Northern Pacific for withdrawing from the California business. The press of the coast having protested against this arrangement an explanation has been made by the Northern Pacific people, which only places the matter in a worse light. In substance the Northern Pacific is to receive 6 per cent. of the gross earnings upon all traffic to and from eastern points—*i. e.*, points east of the Missouri river—and California, except such merchandise as may be addressed to and received by the Occident & Orient Steamship Company (owned by the Central Pacific), it being also understood that the Oregon Railway & Navigation Company shall receive a share of the subsidy paid to the Pacific Mail Company, which is part of the Central Pacific Railroad Company. It need not be added that the Oregon Railroad & Navigation Company is also a part of the Northern Pacific combination. The aggregate subsidy, therefore, which the Northern Pacific receives for doing nothing in return cannot fall under half a million dollars yearly, and, as traffic increases, it will largely exceed that sum.

Now, this money is paid by the land-grant and subsidized railroads as a bribe to another land-grant railroad not to perform those public functions as a common carrier for which it was created by charter and richly endowed by the people. I will not characterize this transaction as a conspiracy against the public, but I do say that it is one which should void the charters of all concerned. Faith has not been kept with the people. A combination is formed which imposes a tax of 6 per cent. on the gross traffic of the Pacific coast to buy off legitimate opposition, and this is done by corporations created by charter and endowed by the people to provide the utmost possible facilities for transportation. It amounts to a partial embargo upon interstate trade, and it is an absolute embargo, through the Central Pacific special contract system which it has perpetrated, of direct ocean transportation between eastern ports and California. Such an abuse would be impossible in any other country under heaven. C.

San Francisco, December 5.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

A note negotiable in form, but whose payment is conditional upon the nonpayment of another note referred to, is not a negotiable note according to the decision of the Supreme Court of Nebraska in the recent case of Grimison vs. Russell.

Upon a negotiable promissory note made by an agent in his own name, and not disclosing on its face the name of the principal, no action lies against the principal, according to the decision of the Supreme Court of the United States in the recent case of Cragin vs. Lovell.

A check is not a bill of exchange within the first section of the Removal act of 1875, where the maker and payee are citizens of the same state, according to the decision of the United States Circuit Court for the Eastern District of Missouri, in the recent case of Levy vs. Laclede Bank.

A contract by which a quarryman for a valuable consideration agreed not to bid for public work upon the streets of the city in which he resided and carried on business as a quarryman and contractor, was recently held invalid by the St. Louis Court of Appeals as being against public policy. Engelman vs. Krainka, decided December 1.

In a recent case in the St. Louis Court of Appeals in which the construction of a chattel mortgage was involved, it was held to be a fair inference that the ordinary shelving, counters and furniture of a dram-shop were meant to pass under the general terms "fixtures worth $625." State to use of Von der Ahe vs. Cabanne, decided on the 1st inst.

The Supreme Court of Texas held, in the recent case of Kauffmann et al. vs. Rabey et al., that the transfer of a negotiable note as a collateral security for a preëxisting debt was in due course of trade, and for a valuable consideration. The court said that the case was much stronger for holding one a

bona fide purchaser when, in addition to the pre-existing debt, money was advanced by the assignee for the benefit of the apparent holder of the note.

In Ohio, according to a recent decision of the Supreme Court of that state, a married woman, having a separate estate, who signs a promissory note as surety for her husband, is presumed, without further proof, to intend thereby to charge her separate estate, and that presumption can only be overcome by proof of facts or circumstances surrounding the execution and delivery of the note which show that such was not her intention. Hershizer et al. vs. Florence et al., decided December 4.

An invention which consisted merely in packing articles in small bundles for the convenience of retail dealers, and uniting the bundles in a larger package, was recently held invalid for want of novelty by the Supreme Court of the United States. King vs. Trostel, decided at the present term. The court said that the subdivision and packing of articles of commerce into small parcels for convenience of handling and retail sale, and the packing of these small parcels into boxes or sacks, or tying them together in bundles for convenience of storage or transportation, was as common and well known as any fact connected with trade.

Damages resulting from the particular character of the business of a traveler on a railroad, unknown to the company, are too remote to be recovered in an action against the company for negligence, according to the decision of the Georgia Supreme Court in the case of the Georgia Railroad vs. Hayden, decided on the 6th inst. The case was one brought by a theatrical manager, who, together with his troupe, had been delayed and prevented from giving a performance at a certain place in consequence of an accident on the road. The first notification of the plaintiff's arrangements, it appeared, was not received by the company until after the accident occurred.

In the case of a partnership composed of only two members, a valid disposition of the partnership property cannot be made by one member of the firm, against the protest of the other, to a purchaser who has notice of the facts, according to the decision of the Kentucky Superior Court in the case of Babcock et al. vs. The Deposit Bank, decided December 3. The court further held in this case that in a contract to manufacture and ship goods to a certain amount, the title did not pass to the purchaser until the act of shipping contemplated by the contract had been commenced, and that the manufacture, marking and setting apart of the goods was not sufficient to pass the title.

The Albany *Law Journal* has a note of the case of Trussell vs. Scarlett, decided by the United States Circuit Court, Maryland, in which it was held that when a mercantile agency makes a communication to one of its subscribers, who has an interest in knowing it, concerning the financial condition of another person, in good faith and under circumstances of reasonable caution as to its being confidential, it is a privileged communication, and an action for libel cannot be founded upon it, even though the information given thereby was not true in fact, and though the words themselves are libelous. This decision is in line with the most recent and best considered authorities.

In the case of Guice et al. vs. Henshaw, recently decided by the Texas Supreme Court, it appeared that the plaintiff contracted to furnish the defendant with saw stocks at a certain price at the mill, which price the defendant was to pay the plaintiff in lumber, the defendant agreeing to furnish to plaintiff the materials from which the saw stocks were to be made. The plaintiff performed his part of the contract as far as he was able, but was unable to complete it because of B.'s failure to perform on his part. In this action, brought by the plaintiff to recover for breach of contract, it was held that the measure of damages was the difference between the cost of the delivery of the saw stocks at the mill and the market value of the lumber the plaintiff was to receive at the time when the defendant refused to allow him to proceed with his contract.

Where compensation is to be paid to a broker or real estate agent by way of commissions, the whole service or duty must be performed before any right to commissions arises, unless the act of the principal has prevented the performance of it, according to the opinion of the Supreme Court of Georgia in the case of Hyams vs. Miller, decided on the 6th inst. This was a case where a property owner contracted with a real estate agent that the latter should not only find a purchaser for his property, but also make actual sale of the same upon terms stated. The court held that it was necessary for the agent, before claiming commissions, to find a purchaser in a situation and ready and willing to complete the sale; but that upon doing this he would be entitled to his commission, although the vendor should refuse to perfect the sale.

Prior to 1873 bonds of the Macon & Brunswick Railroad Company, amounting in the aggregate to $600,000, were indorsed by the governor of Georgia under the authority of the state legislature. In the year mentioned the railroad company failed, and the governor, in order to secure the interest of the state, created by its indorsement of these and other similar bonds, seized the road. Two years later the state, by act of its legislature, repudiated its indorsement of the bonds in controversy, but confirmed by purchase its right to the road, and made provision for the payment of another earlier series of bonds which also bore its indorsement. Suit was brought by one of the holders of the $600,000 series of bonds against the governor and treasurer of the state and others to test the question of the state's liability and to obtain relief. The United States Circuit Court for the Southern District of Georgia dismissed the bill on the ground that it was virtually a suit against the state, and that the state was not and could not be made a party to it. This decision was affirmed on appeal by the Supreme Court of the United States on the 3d inst. in the case of Cunningham vs. The Macon & Brunswick Railroad Company et al.

The predecessors in business of an existing English firm in 1842 invented and began to use a trade mark on a perfume called Florida water. This trade mark consisted of an elaborate combination of a fountain surrounded by figures and foliage, the name of the perfume and the name of the manufacturers. This trade mark was registered by the English firm in 1880 as their property in connection with perfume. Recently a German subject residing in Hamburg applied for the registration of a trade mark almost identical with that of the English firm, the only difference being that the names of the manufacturer was changed and that Hamburg was substituted for London. This mark, the applicant alleged, had been used by him since 1869 in Germany and elsewhere. Judge Chitty, sitting in the Chancery Division of the High Court of Justice, remarked upon the close resemblance between the trade marks, and said that it might fairly be inferred that the later was a copy of the earlier. He held that alleged foreign user without any user in England could not entitle the applicants for registration and he refused their application. In re München's application, decided November 14.

A contract between a company engaged in the manufacture of cotton gins and certain agents thereof provided that all sales should "be for cash or notes with lawful interest from December 1st until paid; drafts made payable to the order of and guaranteed by the party of the second part (the agents); all cash drafts or securities so received for such sale to be as special trusts for account of said cotton gin company, and remitted, with such other securities as may be taken, to said company." The agents transmitted to the company an account of their sales to date, and after deducting commissions claimed by them, remitted a portion of the balance by check, and sent them two notes for the remainder. The receipt of these was acknowledged by the company, who stated in reply, "we place same at your credit with thanks." Before the second note fell due the agents made an assignment. In an action between the company and the agent's assignee the Supreme Court of Georgia held that the transaction between the agents and their principal was not a new contract, but merely a remittance in the ordinary course of business on the one part and an acknowledgment thereof on the other, and the taking of the notes was not payment until they were themselves paid. Hall's Self-feeding Cotton Gin Co. vs. Black, assignee, decided November 27th.

BUSINESS NOTES.

The New Orleans *Times-Democrat* says that its expedition sent to explore the Everglades in Florida has successfully accomplished its task. The expedition has been gone nearly two months.

The First National Bank of Brookings, Dak., has been organized; capital $50,000; Thomas L. Fishback president; Horace Fishback cashier. John P. Terry is president of the First National Bank of Portsmouth, Ohio, in place of J. Y. Gordon.

The Produce Bank went into liquidation on the 10th inst., the Attorney-General having previously begun an application for a receiver, on an alleged impairment of capital. The depositors, whose claims aggregated $164,000, were paid in full. It is proposed to reorganize the bank under a new name.

The total number of failures in the United Kingdom reported to *Kemp's Mercantile Gazette* (London) for the week ended November 28 was 221, against 223 and 271 in like weeks in 1882 and 1881. Of these England and Wales had 197, against 203 and 257; Scotland 20, against 19 and 12, and Ireland 4, against 1 and 2.

Iron (London) says that underground telegraph cables in France are inserted in cast-iron pipes laid at a depth of more than 1½ meters, chambers for repairs being inserted every 500 meters. Every 100 meters the pipes are united by cast-iron couplings, permitting inspection and repairs. Joints between pipes are made with an india-rubber washer or lead collar.

The number of cattle in Montana in October, 1883, is reported to have been 475,000, valued at $30 per head, $14,250,000; number of sheep, 700,000, value $3 per head, $21,000,000; number of horses 90,400, at $75 per head, value $687,500. Twenty-five thousand head of imported breeds of cattle have been brought into the territory this year, also some of the finest racing and trotting stock.

The building operations in St. Louis during the past year have increased steadily. The total number of permits for brick buildings issued during the year 1883 was 2,973; total value of brick buildings $8,996,941; total number of frame permits issued 789; total value of frame buildings $470,583; total value of alterations, brick and frame, $956,345; total improvement, all classes $10,423,869. The prospects are good for continued activity during the coming year.

Bismarck, the metropolis of Dakota, a city of 4,000 inhabitants, has grown quite rapidly during the past year. The *Dakota Daily Capital* says the increase in building operations over last year is about 300 per cent. The number of buildings and cost were:

Public buildings, brick, 3	$380,000
Public buildings, wood, 1	1,000
Business blocks and store, brick, 4	138,000
Business blocks, wood, 32	76,100
Residences, brick, 2	15,500
Residences, wood, 163	189,330
Barns, 15	5,860
Additions to buildings	21,120
Average cost of 165 residences	1,835

The St. Paul *Pioneer Press* says of the Canadian oil regions owned by the Winnipeg & Northwest Petroleum Company, that the petroleum is of superior quality. The new fields are situated on the Lesser Slave river, in the old Hudson Bay Company's territory, about four miles above the river's junction with the Athabaska, a tract of country fully 320 acres in extent. No wells have been dug as yet, and none will probably be begun before spring. The discovery of these fields is expected to bring petroleum within reach of the whole region.

The tendency to increased efficiency in business methods and hence to the formation of trade exchanges has its latest exemplification in the newly incorporated New York Naval Stores and Tobacco Exchange. Several prominent business men and firms identified with the lines of trade represented have united with this exchange. It is understood that the New York Petroleum Exchange and the New York Mining and Petroleum Exchange, which have for some time been discussing a proposition to consolidate, will ballot for a decision on the 22d inst.

The London *Labour News* of December 1 reports the labor market still unsettled. Interest centered in the impending strike in the colliery districts, in which forty thousand miners were expected to participate. Agitation was reported again among the iron-workers in the north. There was a small strike at Birmingham. Greenock boiler-makers were resisting a proposed 5 per cent. reduction in wages, and some of the ship-builders at Barrow-in-Furness had struck for like reasons. Building was active. Workmen were in demand for railway construction and public works, and the principal textile manufacturing centers were offering plenty of work. In London the smaller industries were fairly active.

In an address delivered before a convention of the National Cotton Planters' Association at Vicksburg, November 22, Mr. T. M. Barna, of Atlanta, gave some figures on the relative cost of planting 50 acres of land with cotton by hand and machinery. "Say it takes by each method seven days to do the work. By the first method you use two mules and four hands. They are worth 75c. each, or $4.50 per day, not counting their board—seven days, $31.50. The cottonseed is worth 15c. per bushel, and you use at least 5 bushels per acre. This would require 250 bushels, or $37.50. Total, $69.50. By the second method you use one hand and one mule at 75c. each, seven days, $10.50; seed used, 1½ bushels per acre (liberal allowance), or 75 bushels, at 15c., $11.25; total, $21.75." This shows a saving of $47.75 in favor of the latter method.

A Scotch report issued on the subject of building societies shows that there are 1,687 such organizations in England, with a membership of 493,271. Total receipts during last financial year amounted to £20,919,473, and the balance of unappropriated profit was £1,567,942. The assets amounted to £44,587,718. In Scotland the total membership was only 5,386. The receipts were £413,609, the liabilities to holders of shares amounted to £674,990, and to depositors and other creditors £263,511. The assets consisted of balance due on mortgage securities £987,987, and a sum of £67,618 invested in other securities and cash. Ireland had 9,714 members of building societies. The receipts were £778,889; liabilities to holders of shares £684,396; to depositors and others £432,050. The assets included balance due on mortgage securities £1,051,423, and amount invested in other securities £79,802.

The St. Paul *Pioneer Press*, in reviewing the building operations in that city for 1883, says that the increase in number of buildings erected and in the amount of money expended is as far ahead of like figures in 1882 as were those of 1882 in excess of the record for 1881. Local architects expect that building operations next year will exceed those of 1883. The following table shows the number of buildings, classification and cost:

	No. stores.	*Amount expended.*
Business blocks	290	$2,341,700
Frame business buildings	104	241,900
Public buildings	49	779,300
Total	443	$3,362,900
Residences, No	3,037	4,741,050
Grand total	3,480	$8,103,950

The following is the number of buildings and cost of same for 1883, as compared with 1882:

	1882		1883	
	No.	*Expenditure.*	*No.*	*Expenditure.*
Buildings	333	$2,000,000	443	$3,362,900
Residences	2,178	3,546,000	3,037	4,741,050
Totals	2,511	$5,546,000	3,480	$8,103,950

The Illinois Bureau of Labor Statistics has completed a report on the coal fields of that state. A summary of the chief points is as follows:

Number of counties producing coal	49
Number of mines	639
Number of acres of land owned or controlled by proprietors of mines	110,803
Number of acres worked out	12,329
Number of men employed	23,939
Number of tons produced	10,508,791
Increase over 1882	1,393,148
Value of the product at the mines	$15,310,521
Amount of capital employed	$10,396,540
Estimated capacity of annual production (tons)	21,035,435
Number of casualties of all kinds	360
Number of lives lost	134

The total number of men engaged about the mines is 23,939, or 3,649 more than were reported last year. The total output of all the mines this year amounts to 10,508,791 tons; about 1,400,000 tons more than last year, valued at an average of $1.45 per ton. This represents an increase in value of $2,000,000. The average value per ton in 1870 was $2.32; the average price for 1880 was $1.44; for 1882 $1.46, and for 1883 $1.45. Local prices of coal at the mines vary in different parts of the state from 90c. to $2.50 a ton. Wages in the central portion of the state are 75c. a ton for mining.

The Cincinnati Chamber of Commerce report for the current year shows that the trade in dry goods in Cincinnati, on the whole, has been favorable. It is thought that more goods were sold to the south than in the preceding year. The retail business, in aggregate value, has doubtless exceeded any preceding year. Facilities for the transaction of business have been enlarged. In some cases foreign fabrics have been practically supplanted by American. The aggregate sales of wholesale dry goods and notions, embracing the sales of such houses as do a wholesale and retail business, and not including cloths sold by wholesale clothing houses, reached in the past year $27,381,258, in comparison with $25,327,[illegible] in 1881–82, $24,203,101 in 1880–81, and $23,6[illegible],531 in 1879–80. The sales in midsummer [illegible]e for the coming season were the largest on record. Prices were lower than in the preceding year, and were probably at the close as low as they have ever been. The cost of making has not varied much. In fabrics and clothing there was a marked decline, that in the latter ranging from 5 to 10 per cent. The sales of clothing at wholesale, including sales of clothing by houses that manufacture clothing, aggregated $18,024,101, compared with $17,099,434 in 1881–82, $17,605,133 in 1880–81, and $15,334,030 in 1879–80.

FINANCIAL.

THE LOAN AND INVESTMENT MARKETS.

The general movement of the stock market during the past week has been downward. To this the coal stocks have proved an exception, some having held steady and others had a sharp advance. The rise in Reading would have sufficed in more propitious times to have stimulated the whole list, but in a market where the Villard stocks were being unloaded with a steady decline in price, while Union Pacific declined almost as much, and the Granger stocks now made heavy by the troubles in the west, the influence of the rise in Reading was almost imperceptible. Some thought it was part of the manipulation on which to unload other stocks. The Northern Pacific pool continues to sell out its heavy holdings, and the whole market is weighed down by it.

The hopes founded on the spurt of activity in the bond market, to which reference was made two weeks ago, if any hopes really were founded on it, have proved delusive. It is hardly probable that any leading operator really did build much upon it, but it was a good thing to talk about, and some of the rank and file of the street, who are naturally bulls, may have believed that things were changing for the better, and acted on their belief. If they did they are probably sorry enough. It was said then, in these columns, that taking the demand for bonds for all it was worth, conceding that the return of the public to the street is always shown first in the bond market, yet there was little in the call for bonds at this particular time to justify an expectation that the stock market would show improvement, because "it is simply impossible that Wall street can revive before the rest of the country; it never did, and it never will. The conditions of business forbid it." So far as the stock market has moved since that time it has moved downward, one or two stocks only being the exception. It has experienced a decided decline during the past week, though the coal stocks have shown exceptional strength under the lead of Reading, which has had a smart advance. The cause of this advance it is not easy to fathom, though it is averred that the company has been doing so well, and earning so largely, that a continuance of such favorable conditions would lift it out of all its difficulties, while a dividend of 3 per cent. on the stock is already spoken of as a sure thing for the 1st of January. This, however, is certainly not enough to make Wall street believe very heartily in Reading under Mr. Gowen's management. Personally, he is a man whose hands are clean, whose personal integrity has never been questioned; but his ability in the manipulation of figures, his mania for borrowing money, and his skill in giving a fictitious appearance of prosperity to a company are too well known in Wall Street not to cause any statements he may make now of the prosperity of the Reading Company to be received with profound distrust. He has, for example, been telling the public for months past that the Jersey Central under its lease to the Reading was earning all charges and a surplus over the dividend; yet the other day, having made an arrangement to change two millions of income bonds into debenture bonds at a different rate of interest, he siezed the favorable opportunity to issue of these new debenture bonds five millions—thus adding three more millions to the already enormous debt of that road. Such facts as these cause people to receive with some allowance the statements of the large earnings of the property.

The sharpest advance in Reading occurred on Thursday, but it failed to arrest the downward course of the market that day, giving it merely a ragged look. The weak stocks have been preeminently the Villards, which, under constant feeding out from some source, are sinking slowly in price. The Northern Pacifics are now lower in price than they were at the lowest level of the great fall in October, just previous to the famous "corner" in the preferred, and lower than they have been at any time before since the advent of the Villard regimé. The rumors are again repeated, and this time apparently from bull quarters, that Mr. Villard will soon resign, and Mr. Frederick Billings, the former president, take his place. Oregon Transcontinental did not till yesterday reach the lowest point it struck in the October break. It seems to be steadily working down, and unless the bears get to selling it too much, and so open the way for another sharp twist, it will not be long before it is lower than it was in October. The company formally passed the January quarterly dividend this week, and the stock rose a little on the announcement, as is customary in Wall street. This was due, probably, to the covering of shorts put out on previous knowledge that there would and could be no dividend. The depressing effect of the public declaration of the condition of the company would naturally offer the best chance to cover. The manipulation of the stock, credited to Mr. Keene, has been very skillful; but the decline has been none the less sure. Oregon Railway & Navigation stock, another of the Villards, is on the way down, but it goes slowly—for being a comparatively small stock, and a good deal tied up, it is dangerous to sell it short, and the general run of traders, not knowing much about it, prudently let it alone.

Union Pacific has been very roughly treated. There is little danger of a corner in that stock, for there is altogether too much of it, and the various pools that from time to time have been formed to put up the price, as it has been working down for the past eighteen months, have one and all been severely bitten. The last one, formed about two months ago, and whose buying put the stock up about 6 per cent., is thought to have made as losing a speculation as their predecessors. It is not often that Wall street is so thoroughly deceived about a property as it has been with Union Pacific. It was considered to be a good investment stock only a year ago; its steady tendency to decline was a puzzle. New England appeared to have the most profound belief in it, and even now we are constantly treated by the Boston papers after every fall in the price to homilies on the daily increase in the number of New England and Boston holders. Nevertheless the stock keeps going down and none exhibits less elasticity on the reactions of the general market. It has been the chief sufferer in the depression which has taken place this week in all the roads affected by the Iowa pool troubles. Its earnings show the most alarming falling off, and the delays in publishing them increase the general distrust. It was only a few days ago that the October report was published, while rumors were already about the street that the earnings for November would show up worse than those for October. Such rumors in the past have usually turned out marvelously correct, showing that some one has means of getting information. The truth seems to be that the Union Pacific road could only maintain its prosperity as a monopoly when it was able to make and maintain frightfully extortionate charges for both freight and passengers. Its charges and its methods of doing business made it probably the most cordially hated railroad company in the country by the great body of shippers, and when the Burlington road built to Denver, and there established connection with the Denver & Rio Grande, carrying it on to Ogden, thus competing with the Union Pacific its whole length, the day for high charges and abundant business passed forever.

It now appears that it is the Burlington extension to Denver which has caused the break up of the Iowa pool and actually forced the alliance, thought before to be incredible, between the Rock Island and St. Paul roads with the Union Pacific. This extraordinary triple alliance is aimed at the Burlington road, which, by the terms of the agreement, is said to be excluded absolutely from any possible union with it, while the way is left open to the Northwest, the Wabash and Missouri Pacific (which both run to Omaha) to come in if they like. If they do it must be on such terms as the allies dictate. This, it will be seen, is a very threatening state of affairs; but it is said that the Northwest will join the Burlington road in a like alliance, thus making two continuous lines from Chicago to Ogden. In this there is the element of a peaceful solution of the difficulties, for instead of half a dozen conflicting interests to be consulted, there will be two powerful alliances, each power represented by one agency, and the interests of both will be promoted by agreement to do business without cutting each other's throats. Before agreement is reached there may be a desperate war, but it is considered that what at first sight seemed so formidable is, in fact, the way of final peace and harmony. It may be added that the Gould interests seem left out in cold entirely, and in all the discussions of the matter they have cut no figure whatever. It remains to be seen what Mr. Gould will do. He is not a man easy to leave out in calculations where his interests are affected, but it is also true that the managers of these Western roads have always shown themselves inimical to him, and in this last grand reorganization of the relations of their several systems they do not appear to have consulted him at all.

There is nothing to say of the loan market, except that it continues in its usual condition of ease, with call loans at 2@2½ per cent., and all the money any one has good collaterals for obtainable at those figures. Exchange rates have shown a rising tendency in the latter part of the week, as in the first part they showed the opposite. The posted rates now are $4.83 and $4.85½. Government bonds are steady at the advanced quotations. The following were the closing prices yesterday:

	Dec. 7, bid.	Dec. 14, bid.	Dec. 14, asked.
U. S. 4½s 1891, registered	114⅛	114¼	114⅜
U. S. coupon	114	114¼	114⅜
U. S. 4s 1907, registered	122½	123	123⅛
U. S. 4s 1907, coupon	123½	124	124⅛

The bank statement of Saturday showed a large expansion in loans and a decrease in the surplus reserve of $1,528,225, bringing it down to $4,670,750, which is slightly below its figure at the corresponding date last year. The following are the comparative totals of the statements of December 1 and December 8:

	Dec. 1.	Dec. 8.	Differences.
Loans	$325,746,700	$327,866,100	Inc. $2,119,400
Specie	58,131,600	57,825,100	Dec. 306,500
Legal-tenders	27,326,400	26,582,700	Dec. 743,700
Deposits	317,936,100	318,948,200	Inc. 1,912,100
Circulation	15,396,600	15,412,400	Inc. 15,800

COMMERCIAL.

SUMMARY.

The general movement of merchandise throughout the country this week, as reported in special dispatches to BRADSTREET'S, has been quite as moderate as in the preceding week. There has been some activity in bleached cotton fabrics, owing to a reduction in price, but, aside from the rather freer shipments by agents, for summer requirements, no special movement has resulted thus far. Woolens are dull and have been so for some time, largely owing to the unseasonable weather. For a like cause the clothing trade at retail has not enjoyed its customary activity. At Chicago, Kansas City, and at various points in Iowa, the dry goods trade has been maintained in proportions rather in excess of those enjoyed at other interior points of distribution. The industrial situation has not changed much. Some 3,000 bituminous coal miners near Pittsburgh have gone out for an indefinite period. The reduction in wages at the steel-rail mills will probably be very generally acceded to. It has been, in a majority of instances, already. In this way it is probable that more rail mills will not have to shut down. The number of bar-iron mills which have closed for the holiday season is in excess of the number which usually close at this period, due to the excessive competition and lack of business. There is no change to note in the condition of the iron and steel industry. At the east there are as yet no signs of improvement, although stocks of pig are not gaining. At a few western points a better feeling is apparent, owing to reduced stocks of pig iron. Petroleum is dull and apparently indifferent to the bullish cast of its statistical position. Refined has advanced ¼c., and holders are naturally very independent. Coal is in moderately active request. Production of anthracite thus far has caught up with the total for 1882, and now promises about 31,000,000 for 1883, as against 29,120,000 tons last year. Indian corn has enjoyed the most activity, having advanced 5c. per bushel. It has since lost about one-half of this amount. Wheat in sympathy advanced 3c., but dropped one-half of the way back. Provisions sympathized with corn, and declined on free selling by packers and speculators. The shortage in the corn crop and its alleged poor condition are responsible for the advance, aside from manipulative influences. The wool trade has ruled quiet, but the market is very firm, and supplies of desirable grades are under exceptionally good control. There were 249 failures in the United States reported to BRADSTREET'S during the past week, 3 more than the preceding week, 19 more than the corresponding week of 1882, and 84 more than the same week of 1881. About 73 per cent. were those of small traders whose capital was under $5,000. Canada had 32, a decrease of 1.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: All branches of trade are dull and business is demoralized. The outlook for the winter business is discouraging.

From Boston, Mass.: The holiday trade shows some improvement over last week, and the retail stores have been well patronized since Monday, but dealers still say that the volume of business is not near as large as last year at this time. The break in the prices of plain cottons has led to some large sales from first hands, but in other respects the whole dry goods market is very quiet. The boot and shoe trade has increased, and the factories are better supplied with orders. In wool there has been a fair business at steady prices. Hides continue to hold a strong position. Leather is selling a little more freely. Metals, lumber and other raw materials are without important movements. Money continues in abundant supply, and bank rates are easy at 5@6 per cent. for prime business paper.

From Providence, R. I.: General business continues dull, except in holiday goods at retail. The year is closing with small gains, and some of the wholesale dealers in such lines as groceries are in doubt if they have made any money, owing to the restricted takings manifested by consumers and the sharp competition of trade.

From Philadelphia, Pa.: The general distributive movement continues on a moderate scale, and there are no indications of any immediate improvement. Merchants are getting affairs in shape for the closing of accounts, and generally show a disposition to defer new ventures until after the turn of the year. Retail trade has been quickened by the approach of the holidays, and there is greater activity in all lines.

From Cincinnati, Ohio: As the year draws to a close the usual dullness marks the trade movement, and the holiday interval of inactivity has apparently set in early.

From Cleveland, Ohio: General wholesale trade has been moderate during the past week.

From Chicago, Ill.: Money active 6@7 per cent.; supply fair; exchange is 25c. discount. Shipments of money to the country are liberal and the absorption by pork packers is large. Collections from the interior are rather better.

From Peoria, Ill.: No change in general trade. It is quiet and unsatisfactory, with unseasonable weather.

From Detroit, Mich.: General business for the past week is quiet, but collections have averaged good, much better than anticipated. Dealers in holiday specialties report trade lighter than last year. The money market is easy.

From Evansville, Ind.: Business is fairly active, especially in fancy and holiday goods. Money close, with a good demand at 7 and 8 per cent.

From Indianapolis, Ind.: Trade for the past week has not been very brisk, and quietness prevails in the jobbing trade. The weather is warm and unseasonable. Dealers in holiday goods are having a fair trade. Money is easier.

From Louisville, Ky.: Trade is quiet. The weather is mild, and winter goods are moving slowly. Money is active and well employed. Exchange is weak.

From St. Louis, Mo.: General trade has about the same volume as usual at this season. Collections are fairly easy. The weather continues unseasonably warm. Money is still in brisk request at 7 to 8 per cent. New York Exchange is par to 50c. premium. Prime commercial bills are par.

From Burlington, Iowa: There is a very steady general business being done in all lines. Trade so far this season exceeds that of last fall. Colder weather is anxiously looked for.

From St. Paul, Minn.: Jobbing in all lines has moderated within the last two weeks. This is partly due to the mild weather and partly to the lessened wheat movements. Farmers are economizing to pay off land mortgages due. This forces them to neglect some of their store bills. Collections of this kind are dull for the holiday season; 30 per cent. less than last year. Money is in less active demand, but there is no superabundant currency; movement moderate; shipments to the country exceeding receipts after a week's excess of arrivals. Country bank balances are tending to improvement. Collections are fair but slow. Eastern exchange is in moderate supply and good demand is firm at shipping rates between banks.

From Minneapolis, Minn.: The weather is mild and pleasant with no snow thus far. Business generally is good. In groceries and hardware a fair business is reported. Collections are only fair. The light amount of produce is against good collections. Thus far building operations have progressed with very little interruption from the bad weather. The money market continues close; very little improvement is reported at banks. It is difficult to place gilt-edged paper by outside parties. Eastern exchange is steady.

From Milwaukee, Wis.: The city trade is generally fair though light in winter goods. Collections are unchanged, good in some lines and poor in others. Currency shipments westward are light, while receipts increase.

From Lawrence, Kan.: General trade remains dull and unchanged with no new features. Dealers are, however, confident of a speedy revival of business by reason of the excellent crops of the past year. Over 60,000 barrels of apples were shipped from this point this fall. Collections are fair.

From Topeka, Kan.: General trade is slightly better than last week. Feed and corn are in brisk demand with advancing prices.

From San Francisco, Cal.: There is an active retail trade in holiday goods. The wholesale trade is dull.

From Baltimore, Md.: The holiday trade has fairly opened, and retailers are kept busy. With this exception there has been no increased activity in any department of business.

From Norfolk, Va.: Dry goods move a little more actively. The weather is exceedingly fine. Collections are moderate.

From Wilmington, N. C.: Business in general is good, especially among grocers and fancy goods dealers selling for the holidays.

From Savannah, Ga.: The trade situation shows few new features, but is more enlivened by merchants filling in stocks for the holiday demand. The drouth continues, and rivers are so low that much produce and lumber has been unable to find its way to market. This has helped to weaken the trade situation.

From New Orleans, La.: Coil oil and all burning fluids are entirely controlled by the combination formed by the Chess-Carley Company, which is trying also to control the local naval stores market. Money is lessening in strength, though the demand continues good. State and city bonds are being manipulated for a rise. General markets are more active, but not remarkably brisk.

From Memphis, Tenn.: Business in the general market is quite active.

INDUSTRIAL.

Work has been suspended for the holidays in five or six rolling mills, and a suspension in several more takes place to-day. Others will follow next week. The reduction in wages at the Bessemer mills has been accepted, and no further suspensions are probable for the present, although early orders are barely sufficient to keep mills busy. One new steel mill and one new iron mill are projected in Pennsylvania. About 100 operatives in a Springfield cotton factory have struck against a reduction of wages, and three hundred girls in a New Orleans cotton factory struck Wednesday against eleven hours' work daily. An iron mill, nail factory and glass works at Brilliant, Ohio, resumed work Monday. The contract has been given out for the construction of the longest of the tunnels on the Vanderbilt line between Harrisburg, Pa., and Wheeling, W. Va. Six thousand miners on the Monongahela river, Pa., will suffer enforced idleness in a few days because coal is a drug in southern markets. A miners' state convention will be held in Pittsburgh, Pa., January 3. Labor unions are taking steps to oppose the bringing of foreign workmen to the United States under contract.

The glassworkers' strike continues, and rumors prevail of concessions from both sides, but the manufacturers, while willing to resume, are able to meet their customers' requirements with imported glass. The glass-producing capacity is considerably in excess of the probable demand. The same is true in the nail trade, and the real contest in these industries is yet to come. There are a number of railway enterprises contemplated throughout the country, but the requirements for rails will only be sufficient to furnish steady employment to the available capacity. There is a greater than usual suspension in several branches of textile manufacture in the New England states, but there has as yet been no movement towards a reduction of wages. Representatives of Swedish labor unions are visiting American unions to learn what they can of American methods in labor questions.

INDUSTRIAL FEATURES

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The machinists and ironworkers, as a rule, find orders scarce. There are very few instances which are an exception. These are concerns having special lines for which there is a demand. The manufacturing jewelry trade is about closed up for the season, and has been the most unsatisfactory for years, though there are some special lines in this department also which have done and are still doing well. Previous to this year business was exceptionally good in jewelry.

From Cleveland, Ohio: Manufacturers of machinery, engines, steel rails, etc., are reducing their help, and four hundred men are out in consequence of the burning of the Union Rolling Mill.

BREADSTUFFS ABROAD.

There is no change to report in the state of the British grain market during the past week. Wheat has been generally steady and Indian corn firm; but no quotable advance has been noted. The imports into the United Kingdom for the past week, for the previous week and for the same week last year were as follows:

	Dec. 11, 1883.	*Dec. 4, 1883.*	*Dec. 12, 1882.*
Wheat, qrs..	150,000@155,000	225,000@230,000	190,000@195,000
Corn, qrs....	110,000@115,000	95,000@100,000	Below 25,000
Flour, bbls..	135,000@140,000	195,000@200,000	165,000@170,000

Navigation is practically closed at north as well as south Russian ports, and wheat at St. Petersburg has advanced some in price. In France the markets have shown very little change for wheat. The flour market is steady. In Germany wheat is dull and spring corn slow. In Austria-Hungary there has been little change in wheat prices. There has been a fair consumptive demand but little speculation. Flour shows no price alteration from a week ago. The latest news from India rather favors buyers, for Bombay has lost its recent firmness and tends to lower rates. Calcutta, however, was still stiff. The prospects of the crops in Australia, New Zealand and Tasmania is for an increased acreage and abundant harvest. The exports to Europe will be considerably larger than in any former year; but it is, of course, too early for allowing the estimates of the quantity for export to be otherwise than uncertain, as similar early reports have been in some other years. From South America harvest news is very good, the Argentine Republic reporting 30 per cent. increased wheat area. The development of South American industry and farming, as has been remarked by a foreign contemporary, seems to require nothing but settled government and continued immigration.

Respecting the heavy visible supply here, the *Mark Lane Express* says: "The visible supply in the United States is larger than it has ever been before, but there are reports to hand of large accumulations of wheat in north Russian ports for shipment when navigation reopens in the spring. Buyers, therefore, are apathetic and cautious in the extreme, as well they may be."

The quantity of grain on passage, December 13, 1883, was:

	Wheat, qrs.	*Corn, qrs.*
To the United Kingdom	2,050,000	260,000
To continent	390,000	50,000
Total quarters	2,440,000	310,000
Equal bushels	19,520,000	2,480,000
Compared with the previous week:		
To the United Kingdom	2,000,000	210,000
To continent	380,000	65,000
Total quarters	2,380,000	275,000
Equal bushels	19,040,000	2,200,000
Increase, bushels	480,000	280,000

AMERICAN WHEAT MARKETS.

Saturday and Monday witnessed a vigorous advance in the price of wheat. The bases therefor were as various as the source of inquiry respecting them. The outlook for war in China cut a considerable figure, but active buying by speculators appeared to be as potent as anything else. Tuesday evening marked nearly 3c. advance, but Wednesday witnessed a serious reaction. The advance was not sustained by the export movement or by decrease in supplies. The receipts at the west increased, and while shipments abroad increased some they were considerably out of proportion with the higher rates asked. The gain in the visible supply likewise weighed heavily on the higher quotations, as shown by the table of prices given below. On Thursday there was a reaction, which was recovered in part on Friday, amounting in all to about ¼c.

The Government Agricultural Bureau December report on the wheat crop says that the aggregate will slightly exceed 400,000,000 bushels; that the oat crop is larger than last year, and will exceed 500,000,000 bushels, and that rye and barley will be a little less than last year. A telegram from Ottawa, Ont., says that in consequence of representations made to the Customs Department by Ontario millers respecting the inferior quality of the present year's crop, the wheat millers will hereafter be credited with duty on four bushels and forty-five pounds of wheat for every barrel of flour produced from imported wheat from the United States ground in bond in Canada and exported. Formerly the department held that a barrel of flour could be obtained from four bushels and thirty-five pounds of wheat. This is in strict accord with the mention made last week of inferiority in the quality of the wheat crop of the United States, as shown by the grade of car-load lots of grain received at New York thus far since harvest.

The amount of grain in store at Chicago and the prices of the same at the periods indicated below were as follows:

	Wheat, bushels.	*Corn, bushels.*	*Oats, bushels.*
December 10, 1883	10,207,815	1,496,828	672,574
Price	97½	59¼	35
December 3, 1883	9,573,326	1,101,533	474,119
Price	90¼	55	30¾
December 11, 1882	4,060,670	1,240,733	313,155
Price	94½	55⅛	37⅛

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended December 8 amounted to 2,496,435 bushels, against 2,215,177 bushels in the preceding week, and the shipments to 462,874 bushels, against 828,690 bushels in the week previous.

The receipts of wheat at the seaboard ports for the week ended December 8, 1883, amounted to 662,260, and in the previous week to 846,255 bushels. The exports from the eastern seaboard ports during the week ended December 8 amounted to 962,848 bushels, as compared with 514,075 bushels in the preceding week.

The course of prices of wheat options at New York and at Chicago (at 1 P. M.) during the week has been:

	New York.					Chicago.	
	Dec.	Jan.	Feb.	Mar.	May.	Jan.	Feb.
Fri. Dec. 7	$1.10⅛	$1.12	$1.11⅛	$1.16	$1.19	.95¾	.96⅝
Sat. Dec. 8	1.10⅞	1.13	1.15¼	....	1.20⅜	.97¼	.98⅛
Mon. Dec. 10	1.12¾	1.14⅜	1.16½	1.18½	1.21⅞	....	....
Tues. Dec. 11	1.12	1.13¾	1.15¾	1.17¾	1.21	.97½	.98½
Wed. Dec. 12	1.11¼	1.13⅛	1.15⅛	....	1.20⅜	....	....
Thurs. Dec. 13	1.11¼	1.12¾	1.14⅞	1.17⅞	1.20	.97⅛	.98⅛

INDIAN CORN.

From the close on Friday evening of last week until Wednesday of this week the net gain in price of Indian corn was 3¾c. per bushel, though in the boom on Monday it was 2c. more than that. The bad condition of the corn at the west, the unfavorable weather for preserving the same, and the bear talk about widely-spread reports of soft corn and a total crop of some 300,000,000 or 400,000,000 bushels less than had been generally expected (viz., 1,600,000,000 bushels), conspired to stimulate the active bull market which ruled. As in the wheat market, the gain scored was in part due to a friendly interest rom Wall street whence many of the buyers hailed. By the middle of the week it became evident that certain heavy operators had been at the bottom of the variation in prices of corn. Receipts kept up, although the visible supply fell away. There was a small decline on Thursday, but a material advance again on Friday. The rumors of a very short crop and poor quality are unquestionably being used to the fullest extent.

The Government Agricultural Bureau December report on the corn crop said that, owing to the injury to soft corn by warm, moist weather north of the fortieth parallel, the corn that has been cribbed is in a worse condition than for many years; the proportion of unmerchantable corn is therefore large. The final estimate of the quantity produced will fall a few millions short of the indications of previous returns, or twenty-three bushels per acre. This estimate relates only to quantity.

The receipts of Indian corn at Chicago, Milwaukee, St. Louis, Detroit, Indianapolis, Toledo, and Peoria, for the week ending December 8, were 1,777,374 bushels, against 1,580,819 bushels in the preceding week, and the shipments were 846,432 bushels, against 1,382,736 bushels in the week ending December 1. The receipts at the seaboard ports in the week ending December 8 were 1,170,124 bushels, against 1,043,761 bushels in the preceding week, and the exports were 657,919 bushels, against 799,599 bushels in the preceding week.

The course of prices of Indian corn at New York and Chicago (at 1 P. M.) during the week has been:

	At New York.				At Chicago.	
	Dec.	Jan.	Feb.	May.	Jan.	Feb.
Friday, Dec. 7	.63¼	.63⅜	.65	.67	....	....
Saturday, Dec. 8	.65¼	.66⅛	.67⅜	.69⅝	.58¼	.58
Monday, Dec. 10	.68	.68⅞	.69¾	.71½	....	....
Tuesday, Dec. 11	.67	.67⅞	.68⅞	.71¼	.60¼	.59⅞
Wednesday, Dec. 12	.66	.67	.68	.70⅜	.60⅜	.59½
Thursday, Dec. 13	.65⅛	.66¼	.67⅛	.69⅜	.60½	.59¼

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Dec. 7.		Dec. 14.

Rye, bushels	2,663,432	2,569,803	1,241,652	1,232,041

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: This has been a busy week in the speculative market for grain, and the fluctuations in prices, particularly on corn, have been sharp and frequent. Corn has been 5c. higher, but has lost half of the advance. Wheat has been up and down, but closes about the same as this time last week. The strength of corn has been the chief feature of the market and the changes in this staple have shaped the course of values on wheat and oats. The rise is due to speculation based on the short yield and bad quality of the year's crop. Exporters have bought very little—having had few orders for wheat and being shut out of the corn market by the jump in prices. Flour has ruled very quiet and buyers have had the advantage on prices without showing much disposition to use it.

From Cincinnati, Ohio: The flour market is without change. The demand is limited, and there is no attempt by either buyer or seller to force trade. Receipts of wheat are in excess of those of last week, principally, however, of low grades. They do not meet the wants of this market. Prices continue strong for high grades, stocks of which are light. The corn market is without noteworthy incident. There is an active demand for good old corn, which is poorly met.

From Cleveland, Ohio: Breadstuffs and provisions are unusually steady.

From Chicago, Ill.: Wheat is active on speculative account, the demand being chiefly local. It has advanced 1c. on covering by shorts, who were frightened at the prospect of bad weather. After bears were filled it lost most of the advance. The feeling at 1 P. M. was feverish, with no outside buying orders. Stocks were rapidly increasing. Corn is unsettled. It opened firm and advanced 1c. on covering by shorts in anticipation of bull manipulations for an advance. It declined when they were filled. The feeling is feverish and the market is not strong. The impression is that large operators have sold out. Near futures show most weakness. Oats are active for May. Near futures are dull. Receipts are large and stocks increasing.

From Louisville, Ky.: Grain is quiet. Wheat is nominal. Oats are firm and offerings limited. Flour is steady.

From St. Louis, Mo.: Flour is in better movement at former prices, but is not really active. Wheat receipts are lighter, but corn receipts are increasing. Wheat stock is increasing. All grains tend downward.

From Milwaukee, Wis.: Receipts of breadstuffs are falling off slightly, owing to the wet weather last week. Wheat is averaging less than 90,000 bushels daily. The receipts of flour for the week ending Thursday were 75,000 barrels. Receivers say the movement of wheat in the country is falling off, but in case of a railroad war cutting of rates would increase the receipts. Flour production is about the same as last week, 3,000 barrels daily. The flour market is stagnant, and there is little or no export demand.

From Minneapolis, Minn.: The movement of wheat is only moderate. The want of storage room is a serious drawback. The local wheat market is firm and a trifle higher; No. 1 hard is $1.00½ @ $1.01. Country elevators are mainly well filled. Nearly double the quantity of wheat is in store in the northwest that there has been in any former year at the same date. The flour market enjoys a fair demand. Very little corn is offered and little sound corn is in market. There is a fair movement of oats and barley.

From Topeka, Kan.: The demand for flour is very light.

From San Francisco, Cal.: Wheat has dropped 5c. per cental during the past week.

From Baltimore, Md.: Flour is fairly active. Holders express confidence in prices and show no disposition to press sales except at full figures.

From New Orleans, La.: Grain is nominal. Corn receipts 80,000 bushels; exports 150,600 bushels; stock 200,000 bushels. Wheat nothing. Flour is quiet, with the stock ample.

From Memphis, Tenn.: Supplies of breadstuffs are moving briskly,

PROVISIONS.

The provisions market has shown considerable strength during the week, in sympathy with Indian corn, the crop of the latter being reported quite short and of poor quality. The quality of hogs now being received at the northwest is also much below the average, as is their weight. The inferior quality of the corn crop thus appears to be borne out by the grade of animals coming to market. The consumptive demand has been fairly active for home requirements. The total of shipments is such as to exceed that for like periods in immediately preceding periods.

The recapitulation of the week's exports are thus given:

	Pork, barrels.	Bacon and hams, pounds.	Lard, pounds.
New York	4,704	6,387,833	4,892,115
Boston	266	2,413,309	545,773
Portland	1,222	1,321,186	815,730
Montreal	....	....	....
Philadelphia	321	1,071,600	35,000
Baltimore	30	100,000	20,552
New Orleans	153	8,300	3,180
Totals	6,696	11,302,228	6,412,350
Previous week	3,124	13,447,416	6,370,907
Two weeks ago	5,633	7,087,731	5,021,519
Cor. week in 1882	6,654	10,852,311	4,897,116

Comparative summary of aggregate exports from November 1 to December 8, 1883:

	1883–84, pounds.	1882–83, pounds.		1883–84, pounds.
Pork	6,789,800	5,068,800	Inc.	1,721,000
Bacon	51,128,978	33,374,075	Inc.	17,754,903
Lard	32,156,074	28,226,478	Inc.	3,929,596
Totals	90,074,852	66,669,353		

The prices for leading hog products at New York on the days named were:

	Dec. 8.	Dec. 10.	Dec. 11.	Dec. 12.	Dec. 13.	Dec. 14.
Lard, west. spot	8.98c.	9.25c.	8.37½c.	9.17½c.	9.11c.	8.97½c.
Lard, December	8.95	9.24	9.18	9.10	8.92	8.92
Lard, January	9.04	9.31	9.15	9.03	8.99	8.98
Pork, mess, spot	$14.25	$15.00	$15.00	$14.87½	$14.25	$14.75

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Hog products have advanced sharply in sympathy with corn and the rise in western markets, but the higher views of sellers have checked the demand for round lots, and the jobbing trade is less active. Butter is 2c. and 3c. lower and weak, owing to the decline in the west consequent upon the falling off in demand from butterine makers. Cheese is firm but quiet.

From Cincinnati, Ohio: The provisions market as a whole has been a strong one, though at closing prices shows weakness.

From Chicago, Ill.: Pork and lard acted in sympathy with corn, opening higher. They are now weaker. There is not much demand from the outside. Stocks are increasing, receipts of hogs are large, and the quality is generally good. Cattle are firm and active. Receipts are liberal.

From Louisville, Ky.: Provisions are firm. The hog market is active. Receipts are liberal and prices are lower.

From St. Louis, Mo.: Provisions are dull and declining. Hogs are in large supply and prices have fallen heavily, resulting in great activity. Cattle offerings are light and of low quality. The demand is strong and values upward. Horses and mules are scarce and offerings are taken promptly at good figures.

From Milwaukee, Wis.: Receipts of hogs are liberal, but in quality poor, owing to the failure of the corn crop in the northwest. Mr. Plankinton says in thirty years hogs have not run so light as this season, about 215 pounds being the average gross weight.

From New Orleans, La.: Provisions are firm and in light supply with fair trade.

DRY GOODS AND CLOTHING.

The dry goods market for the past week shows a slight improvement, and more business has been done, both for immediate and forward delivery, than last week. Radical reductions were made in the prices of bleached cottons on Saturday, and the result is a slightly improved demand, though not to such an extent as the decline would justify. There is undoubtedly a marked overproduction of this class of goods, and from present appearances a large amount will have to be carried over at the mills. The print market has been dull. Staple dress goods have been in fair demand, and a fair business is reported in holiday goods.

The condition of the woolen trade is about as last reported, and there is practically no market. Heavy houses are not looking after trade to any extent, but are engaged in liquidating last season's business and taking stock. No material change is expected much before the middle of January. The clothing market still continues very dull. Some few out-of-town buyers are in the market inspecting, but as yet are not buying to any extent.

The imports of dry goods at the port of New York, for the week ended December 13, were as follows:

	For consumption.		Withdrawals from Warehouse.		Warch'sed.	
Manuf'res—	Pkgs.	Value.	Pkgs.	Value.	Pkgs.	Value.
Wool	835	$283,819	229	$78,453	445	$185,687
Cotton	1,352	435,755	116	50,471	489	188,112
Silk	859	489,680	106	66,261	159	100,546
Flax	1,231	222,049	289	48,273	427	66,285
Miscellan's	478	110,084	2,903	34,968	502	36,056
Totals	4,755	$1,541,387	3,733	$278,426	2,022	$576,686

The total value of all classes of dry goods imported into the United States was $1,541,387 against $1,087,848 in the preceding week.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: There has been considerable activity in the retail stores, but jobbers and agents report a light business. The only prominent feature is the decline in bleached cottons early in the week, which was followed by some large sales. The wholesale market generally for cottons and woolens is inactive, and agents do not look for much improvement until January.

From Providence, R. I.: The print cloth market is quiet and steady, sales being reported light. Sixty-fours are worth 3½c., less ½ of 1 per cent., and 56x60s 3 1/16c. There are about 103,000 pieces on hand.

From Philadelphia, Pa.: Jobbers have had a quiet week except in a few specialties adapted to the holidays. Lower prices on cotton goods have influenced larger sales in package lots to converters and distributers, and accumulations of some makes have been closed out by agents. The general market however is overstocked and values are weak and unsettled. Woolen goods rule dull.

From Pittsburgh, Pa.: The dry goods trade is not quite so active as last week owing to unseasonable weather.

From Chicago, Ill.: Dry goods are in fair request for the season except heavy woolens, which are slow. Calls are largely for dress goods, staple cottons and articles suited to the holiday trade. Millinery, furnishing and fancy goods are selling as well as expected. The city retail trade is active.

From Cincinnati, Ohio: The dry goods trade has experienced a little spurt of business and the week closes with satisfactory distribution of goods. Woolens are moving very sluggishly, the continued warm weather contributing largely to retard sales in this line.

From Cleveland, Ohio: In dry goods the business is confined almost exclusively to mail orders, though a few fair sales are still being made.

From Detroit, Mich.: In dry goods the volume of business is light and confined to small orders.

From St. Louis, Mo.: The volume of dry goods trade is not materially changed and continues moderate at steady values.

From St. Paul, Minn.: Dry goods are very dull, due to the weather in part. Lumbermen's demand scanty. Retailers collecting but little. Collections generally good.

From Minneapolis, Minn.: The mild weather has checked business in dry goods. Jobbers report a rather light trade. The clothing trade is in the same condition.

From San Francisco, Cal.: Dry goods jobbers have reduced prices to clear off already low stocks.

From Baltimore, Md.: Dry goods remain quiet and dull, with only moderate inquiry for some fabrics.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: There is no improvement in the clothing trade. The weather has been quite mild, and retailers have not had a chance to unload their stocks of heavy goods. Manufacturers will not open the spring trade until January. Winter goods of all kinds are offered at very low prices.

From Cleveland, Ohio: The wholesale clothing season has closed, and manufacturers are very busy making up spring goods.

COTTON.

The market for spot cotton for the week has ruled dull and sales have been light. Qnotations declined a point on Wednesday and another yesterday, closing last evening at 10 7/16c. for middling uplands. The sales for the week have been as follows: For export 36 bales, for consumption 1,166 bales, and for speculation 790 bales, making a total of 1,992 bales, against 1,712 bales last week. The deliveries on contract amount to 3,700 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year.

	This week.	Last week.	Last year.
Ordinary	8 3-16c.	8 5-16c.	7 13-16c.
Strict ordinary	8 11-16	8 13-16	8¼
Good ordinary	9¼	9⅝	9 1-16
Strict good ordinary	9⅜	9½	9½
Low middling	10 1-16	10 3-16	9 15-16
Strict low middling	10¼	10⅜	10 3-16
Middling	10 7-16	10 9-16	10⅜
Good middling	10 11-16	10 13-16	10⅝
Strict good middling	10 13-16	10 15-16	10 13-16
Middling fair	11 5-16	11 7-16	11 5-16
Fair	12 1-16	12 3-16	12 1-16

STAINS.

	This week.	Last week.	Last year.
Good ordinary	7 5-16	7 7 16	7 7-16
Strictly good ordinary	8 9-16	8 11-16	8¼
Low middling	9 3-16	9 5 16	8 15-16
Middling	10 1-16	10 3-16	9⅛

The market for spot cotton closed dull and easy. The future market has been steady and quiet. The port arrivals have been heavy and the general movement free. Prices have been lower, showing an average decline of 20 points for both near and later months from the closing quotations of last Friday. The total sales aggregate 572,000 bales against 339,200 last week and 542,100 for the corresponding week last year.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
December	10.33	10.53	10.33
January	10.38	10 57	10.37
February	10.53	10.72	10.49
March	10.67	10.87	10.61
April	10.82	11.01	10 74
May	10.95	11 14	10.86
June	11.07	11.26	10.98
July	11.19	11.37	11.09
August	11.29	11.47	11.18

The market for futures closed steady.

The southern markets have been quiet and easy. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	*To-day.*	*Last year.*
Galveston	11,148	9⅞	10⅛
New Orleans	36,250	9 15-16	10
Mobile	6,600	9 13-16	9⅞
Savannah	13,800	9 13-16	9¾
Charleston	3,800	10	10
Norfolk	10,664	9 13-16	9 15-16
Baltimore	353	10¼	10¼

The total receipts of cotton at the ports since September 1 are 2,955,601 bales against 2,870,795 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	406,500	416,036
New Orleans	885,341	691,299
Mobile	168,154	177,357
Savannah	480,823	504,129
Charleston	307,891	408,261
Wilmington	70,768	73,925
Norfolk	375,353	431,474
Baltimore	14,475	10,547
New York	30,305	45,488
Boston	47,525	59,261
Philadelphia	5,725	23,259

The total receipts for the week were 280,146 bales, against 263,822 last week, and 258,510 for the same week last year.

The receipts at the twenty-four interior towns usually reported were about 109,168 bales, against 108,866 bales last week and 108,523 bales for the corresponding week last year. The shipments for the week were 83,039 bales, against 113,194 bales last week and 110,999 bales for the corresponding week last year. The stocks for the week were 378,578 bales, against 349,767 last week and 268,439 for the same week last year.

Below will be found the receipts at each of the ports for the week ending December 14, 1883, with comparisons for last week and the same week one year ago:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	7,556	7,224	2,526	5,403	4,908	3,955
New Orleans	25,933	24,551	14,405	10,049	12,796	15,515
Mobile	3,244	5,871	1,262	1,700	1 167	3,554
Savannah	5,483	6,705	4,952	4,757	4,433	5,699
Charleston	4,071	3,752	2,309	3,194	2,680	2,235
Wilmington	379	700	745	594	623	728
Norfolk	5,738	6,111	9,426	6,321	5,202	6,489
Baltimore	664	....	327	....	333	....
New York	676	666	1,869	1,428	1,737	830
Boston	1,917	2,362	2,424	1,183	1,726	2,307
Philadelphia	....	....	42	183	40	37
Totals	55,661	57,942	40,377	34,812	35,645	41,409
This day last week	33,852	49,661	46,652	50,151	35,359	35,183
This day last year	40,825	49,214	34,208	40,107	38,335	43,925

The market for spot cotton at Liverpool has been dull and easier, with a light demand, which was freely supplied. The closing price for middling uplands last evening was 5 13-16d., a decline of one point from last week. The future market has been flat but steady, with a slight decline in prices. The closing quotations last night show an average falling off of 4 points for both near and later months.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
December	5 49-64d.	5 53-64d.	5 53-64d.
December-January	5 49-64	5 52-64	5 53-64
January-February	5 50-64	5 54-64	5 53-64
February-March	5 53-64	5 56-64	5 53 64
March-April	5 56-64	5 60-64	5 55-64
April-May	5 59-64	5 63-64	5 58-64
May-June	6 03-64	6 3-64	5 60-64

The market for futures closed flat.

The sales for the week at Liverpool were 52,000 bales (of which 32,500 were American), against 61,000 (of which 40,000 were American) last year. The sales for export were 2,200 bales, against 6,300 bales last year. The sales for speculation were 1,450 bales, against 3,100 bales last year. The amount forwarded was 15,500 bales, against 19,000 bales last year. The stock in port is 533,000 bales (of which 324,000 are American), against 537,000 bales (of which 282,000 were American) last year. The total imports for the week were 105,000 bales (of which 76,000 were American), against 98,000 bales (of which 70,000 were American) last year, and the amount afloat 325,000 bales (of which 273,000 are American), against 369,000 bales (of which 322,000 were American) last year.

The Manchester market closed dull and tending downward.

The Havre market closed quiet.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The cotton market is quiet. Middling uplands are quoted at 10¾c. and middling gulfs at 11c.

From Philadelphia, Pa.: The market is dull and the tone easy, although there is no quotable change in values.

From Louisville, Ky.: The cotton inquiry and movement is fair. Prices are unchanged.

From Baltimore, Md.: There is very little inquiry for cotton from any source. The market is very dull.

From Norfolk, Va.: Cotton is coming in about as last reported.

From Wilmington, N. C.: Cotton is dull and trade slack.

From Savannah, Ga.: The cotton market is listless and prices are declining for the better grades. The market for the present is unfavorable, yet many holders continue firm in their views and refuse to part with their stocks.

From New Orleans, La.: Since Thursday of last week large receipts have depressed spots 3/16c., except for middling fair, which is off ⅛c., and fair, which is unchanged. The movement is fair. Cotton receipts by railroads here are over 150,000 bales more since September 1 than in the same period two years ago.

From Memphis, Tenn.: The cotton market is firm. Middling is quoted at 9⅞. The stock on hand is 101,000 bales.

WOOL.

There has been a steady consumptive demand for wool in all markets, but purchases in most cases have been proportioned to actual wants and there has been no decided activity at any point. Manufacturers have been canvassing the markets more generally, in expectation of the bargains which are usually available in December, but there are remarkably few "cheap lots" offering this year, as eastern dealers and country consignors alike have confidence in the staple and are not inclined to force sales. Interior stocks have been mostly concentrated and are under the control of parties who are not compelled to sacrifice them in order to meet January payments, while the supply on the seaboard, as heretofore noted, is unusually light for the time of year and is, as a rule, held confidently for full prices. There is general expectation of a good trade after the turn of the year, or as soon as the mills resume active operations after stock-taking and repairs, and as some mills have already commenced inventories it would not be surprising if a renewal of activity should be witnessed during the closing weeks of this month. As a rule, however, the trade do not anticipate much change in the situation until the middle of January. The small stocks favor the belief in higher prices, but this tendency of the market is offset, to a great extent, by the unsatisfactory condition of the trade in woolen goods.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The demand for wool is good and the market is quite steady and firm, particularly for fine fleeces. It is evident that all suitable lots of fine fleeces will be wanted, and samples of new Australia, received during the week, have attracted considerable attention on account of its superior condition and strength of staple. The sales of Ohio and Pennsylvania fleeces have been at 37@38c. for X, and 40@42c. for XX and XX and above. Michigan X fleeces have been sold at 34@35c., as to condition, and the most desirable lots on the market are not offering under 36c. per pound. Combing and delaine fleeces are firm at 39@42c. for fine delaine, and 43@45c. for fine and No. 1 combing, down to 30c. for low and coarse. Uncombed wools have been in fair demand and the sales include 635,000 pounds of all kinds. Prices remain unchanged and continue to cover a wide range of prices, from 16@31½c. per pound. In California wool the sales have been 447,000 pounds, at 12@18c. for fall, and 20@26½c. for spring. Pulled wools have been quiet at from 26@42c. for common and choice supers. Foreign wool continues quiet. The sales have been 120,000 pounds Australian at about 40c., and 630,000 pounds foreign carpet at various prices as to quality. The entire sales of the week have been 3,135,000 pounds.

From Philadelphia, Pa.: Transactions in all grades have been moderate and mainly for actual wants, but there is no abatement of confidence among holders. Sales aggregate 550,000 pounds at unchanged prices.

From Cincinnati, Ohio: The receipts of wool are light; demand is apparently limited to western mills.

IRON.

There is no change worth noting in the iron market as compared with the preceding week. Pig is still quoted at $20, $19 and $17, at $17.50 for Nos. 1 and 2 X and gray forge respectively. Mill irons are as dull as ever, and more establishments have closed down for the dull season. Some few varieties of structural iron are in special demand, but even these as a whole are very dull. Quite a quantity of steel rails have been contracted for at $35 at the mill, though there is a scarcity of orders for nearby delivery.

THE AMERICAN IRON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Trade generally is quiet. No large transactions are noted in any line except wrought pipes. There is more inquiry for Bessemer pig, but buyers want lower prices. Merchant bar is dull and weak. Sheet is quiet. Tank plate and bridge iron are under inquiry for next quarter's delivery, but no important contracts are likely to be closed until January. Small railroad material is active. Forge is steady for standard and weak for inferior brands. No sales of steel rails reported except in small lots.

From Pittsburgh, Pa.: The iron market has undergone no material change since last week. It remains dull and unsatisfactory.

From Cincinnati, Ohio: The iron market is without new features.

From Chicago, Ill.: Iron is quiet. There is some demand for the future. Stocks of bar plate and angle are fair. Nails are dull. Stocks liberal and trade is unsatisfactory. Pig iron is in slow sales in small job lots. Stocks are not large.

From Detroit, Mich.: Trade in iron is dull and prices unchanged.

From Louisville, Ky.: Iron and hardware are quiet and easier.

From St. Louis, Mo.: The iron market is quiet but rather firmer. Pig iron tends to strengthen in anticipation of January orders, numerous buyers being expected in the market at the opening of the year.

From St. Paul, Minn.: Iron is slow and weak. Nails are in fair supply and light demand.

THE HARDWARE MARKET.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Hardware is in light demand and sales generally as good as at this date last year.

From St. Paul, Minn.: Hardware is in reduced consumption. Business is moderately heavy.

COAL.

The anthracite coal trade is only fairly active. The mildness of the weather greatly retards business, and the arrangement for a stoppage of mining is now seen to have been almost a necessity, if the prevention of an accumulation of stocks was the end aimed at. Bituminous coal has not changed in price. The suspension of mining operations in the Monongahela river district this week is for an indefinite period. The total quantity of anthracite coal mined thus far in the year 1883 is 29,079,436 tons, compared with 26,614,446 tons for the same period last year, an increase of 2,464,990 tons.

COAL MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The coal market is unchanged. A committee has been appointed by dealers to appraise the plants of the various coal companies. The work before them is extensive and the probability of the consolidation taking place in the near future is not bright.

From Chicago, Ill.: Coal is rather dull, with no change in price. Stocks are generally reported good.

PETROLEUM.

There has been no improvement in the speculative market for petroleum during the week. The statistical position of the product is as thoroughly bullish as ever, but trading has been generally inactive, and when not so prices have been depressed by free selling. It would not be risking much to venture the opinion that there is more method than chance in the retarded advance in prices of pipe-line certificates which no fact bearing in the situation warrants. The November Pipe Line Company reports show a continuance of the withdrawals from stock to meet the consumptive demand. The total so taken from stocks in tank since August 1 now aggregates nearly 900,000 barrels, and there is no reason in sight to expect an early discontinuance of the same. The decline in net stocks each month has been: August, 291,052; September, 288,037; October, 163,742, and November, 112,485 barrels; a total decline since July 31 of 855,316 barrels. The monthly statements of the last three months are as follows, in barrels:

U. P. L.	*Sept.*, 1883.	*Oct.*, 1883.	*Nov.*, 1883.
Gross stocks	35,792,109	35,510,912	35,245,242
Sediment and surplus account	2,375,433	2,257,978	2,104,793
Net stocks	33,416,676	33,252,934	33,140,449
Certificates issued	27,736,303	27,622,848	28,307,352
Credit balances	5,680,283	5,629,086	4,833,097
Receipts	1,672,488	1,750,479	1,635,745
Deliveries	1,951,490	1,900,918	1,739,517
Excess deliveries	279,002	150,439	100,772

Production of petroleum, as nearly as it can be estimated by averaging pipe-line runs, allowing for stocks at wells, etc., cannot greatly, if it does at all, exceed 63,000 barrels daily. The production of the various districts is declining steadily, if slowly, and there is no new region prolific with oil in prospect to permit augmented production. New oil districts have been discovered heretofore, and may be again. But that is the most encouraging view that can be taken. The daily consumption at home and abroad is about 70,000 barrels, which indicates the necessity for a draft on stocks amounting to 7,000 barrels daily.

During the week speculation has been moderate, and prices were rather depressed. On Friday trading was not active and prices fluctuated as previously.

The following shows the fluctuations in prices of pipe-line certificates at New York during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, December 8	1.16½	1.17⅛	1.16¼	1.16½
Monday, December 10	1.16⅛	1.16⅞	1.15¼	1.15¾
Tuesday, December 11	1.15¾	1.16	1.14⅛	1.14⅛
Wednesday, December 12	1.14¼	1.14⅞	1.13¾	1.14⅞
Thursday, December 13	1.15⅛	1.15⅝	1.14	1.14
Friday, December 14	1.13⅞	1.14⅞	1.13½	1.14¼

Refined oil has been held firmly by the controlling spirits in this market, and as there has been practically no opposition—or competition—in this line since the reported and uncontradicted pooling arrangement between the Standard and Tide-Water people, there is no knowing what the outcome may be. The demand is good, but refiners are independent, and an advance of ¼c. per gallon has been made. The markets for crude and for naphtha have been firm and steady.

Prices, with comparisons at the close of preceding weeks, were last evening:

	Nov. 16.	*Nov. 23.*	*Nov. 30.*	*Dec. 7.*	*Dec. 14.*
Certifi's, crude	1.17⅛	1.18¾	1.16⅜	1.15⅝	1.14¼
Refined, 70°	9	9	9	9	9¼
Crude, in bbls	7⅜@8¼	7¾@8¼	7¾@8¼	7⅝@8¼	7⅝@8⅛
Case, plain	10⅞	10⅝	10¾	10¾	11
Naphtha	6	6	6	6⅛	6¼

The export of petroleum from the United States, crude equivalent, for the week ending December 8, was 7,820,677 gallons, against 10,945,688 in the preceding week. The total export from the United States since January 1 was 606,843,196 gallons, against 587,503,047 gallons in the corresponding portion of 1882, a gain in the current year of 19,340,149 as compared with the gain of 21,663,551 gallons reported last week. The exports from New York, for the week ended December 8, amounted to 6,459,465 gallons, and for the year from January 1 to 496,444,032 gallons, against 461,906,246 gallons in a corresponding portion of 1882, showing a net increase from New York alone of 34,537,786 gallons exported between January 1 and December 8, 1883, as compared with a like period last year.

The Bureau of Statistics reports that during October last the total exports of petroleum and petroleum products (actual number of gallons) amounted to 48,326,250 gallons, valued at $4,233,210, against 45,386,324 gallons in October, 1882, valued at $4,004,229. For ten months of 1883 the quantity was 448,603,487 gallons, valued at $39,924,332, as compared with 437,439,804 gallons, valued at $38,362,840 in ten months of 1882.

OCEAN FREIGHTS.

The market for charters began in the week very dull, rates being quite easy. The supply was not particularly large, but the demand was small. The proximity of the close of the year encourages this condition of the market, as shippers are not inclined to make engagements until after the 1st prox. Even petroleum charters have been quite dull for spot. The usual quantity of miscellaneous freights have gone abroad by steamer during the week at rates which have been current.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: There is only a very moderate inquiry for grain tonnage, but as there are few vessels in port open to charter rates show little change. The Liverpool steamers keep so well employed on miscellaneous freights that agents are not soliciting shipments of grain. Petroleum vessels are in moderate supply, and meet a very light inquiry at steady rates.

From Baltimore, Md.: The freight market is quoted dull and quiet.

From Wilmington, N. C.: Vessels are plenty and rates are lower.

WHISKY.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The whisky men have been agitated over the attempt to advance the price of highwines, but the makers in this locality are so generally opposed to the advance at the present time that it is not likely one will occur. Kentucky distillers have also effected a union for the purpose of caring for their interests.

From Louisville, Ky.: The whisky trade is improving. The tone is more confident and prices are firmer. Kentucky distillers have resolved to keep production down to the lowest limit, and for the ensuing season will again operate on the reduced scale of last year.

TOBACCO.

[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: Leaf tobacco is steady, and receipts are reasonable. Prices are well supported. Manufactured tobacco is active and firm.

From Baltimore, Md.: Tobacco is quiet, and transactions are limited on account of small stocks and light receipts. The new crop of Maryland tobacco has found ready buyers at full prices, and shows a generally desirable quality.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Large buyers have been operating more freely for a week past and the outlook is more promising. Factories on light work have received several large orders, and all are now running with fair contracts on hand. The season's trade is fully four weeks behind, but there is yet time for a large business. Upwards of seventy buyers are here, representing all the principal cities south and west.

SPECIAL CHICAGO TRADE SITUATION.

[Special Correspondence to BRADSTREET'S.]

Chicago, December 12.—There is no abatement in the previous active demand for money from representatives of the grain and provisions trade, who find stocks of such articles accumulating while their bank accounts show a corresponding diminution in their daily credit balances. There is also a good call for loans from miscellaneous branches of trade, but the easier condition of country bankers, who are taking up some of their city paper and increasing their deposits, in addition to the improvement in collections by the leading jobbing houses, enables the banks to maintain, and some have increased, their loanable funds, and the market is rather easier than at the close of last week. There are, however, no appreciable changes in rates, except that it is easier to borrow at former figures, 6 per cent. still being the ruling figure for call and 7 for time loans. New York exchange is in light supply, the demand only fair, as banks wish to employ their funds at home, and are not increasing their eastern balances, and the closing sales were at 25c. discount per $1,000. The movement of money to the grain and live stock sections continues liberal, but is partly compensated by fair receipts from the same quarter in payment for goods ordered and maturing bills.

The jobbing trade is quiet. The dry goods, notion, fancy and furnishing goods houses are having a fair trade in the way of filling small orders from the interior, but the call is chiefly confined to either staples or articles suited to the holiday sales, and there is increasing complaint at the slow movement of all lines of heavy woolen fabrics, the consumption of which is materially lessened by the mild weather. The hardware trade is slow, but not more so than customary at the close of the year. The stove houses complain that the soft weather has reduced the demand for such goods; their profits are also small. Iron remains quiet, but the bar and plate mills say they are filing an increased number of orders to be filled after the 1st of January, and a more hopeful feeling is observable among dealers, who, although not anticipating a boom, look forward to a steadier and more healthy condition of business after the new year fully opens. Pig iron is slow, and no marked change is looked for in the near future.

The markets on 'change show signs of a down turn. It is generally thought that those who have been bulling prices for some time have taken their profits and dumped their load on country dealers and other dupes who always manage to get loaded up at top prices. There is no shipping demand of consequence, and no apparent reason for the large advance that has recently been secured, the whole affair being a thimblerigging operation of a lot of large operators. The stock of wheat in store and on vessels at the close of business to-day is estimated at 10,700,000 bushels, and the receipts are liberal, with little prospective demand in the near future. Corn has been bulled on a supposed deficiency in the last crop and its low condition, the estimates on each of which may be taken with many grains of allowance, as they were made in the interest of those who have been manipulating the market for an advance; hence, the statements of shortage in yield and lowness of condition are likely to prove as unreliable as the estimates made on the past season's wheat crop, all of which have since been upset by the movement of that grain to market and accumulation of stocks in excess of demand. Oats are plenty, but have followed corn up on the theory that if one article of feed advances the others must naturally do so.

The provisions market was boomed on the supposition that the scarcity and high prices of corn must necessarily curtail the supply of hogs. At present, however, those animals are plenty and the packing at all western points shows a large excess over the same time in 1882, and there is no appreciable falling off in quality. Stocks of cured products are also larger and the consumption is said to have been curtailed by the advance that has occurred within the past thirty days.

The demand for wool is slow. Stocks are moderate and include very few lots of really desirable grades.

TRADE EMBARRASSMENTS.

There were 249 failures in the United States reported to BRADSTREET'S during the past week, 3 more than the preceding week, 19 more than the corresponding week of 1882, and 84 more than the same week of 1881. About 73 per cent. of the failures were those of small traders, whose capital was under $5,000. Compared with the previous week the middle states had 61, an increase of 2; New England states 36, an increase of 13; southern states 43, a decrease of 15; western states 89, a decrease of 2; Pacific states and territories 20, an increase of 5; Canada had 32, a decrease of 1. The important firms reported embarrassed were J. P. Billups & Co., cotton, and Charles Fox's Son & Co., manufacturers of cloth caps, New York city; The Manufacturers' Bank, and H. P. Kline, agent, knit goods, Amsterdam, N. Y.; McManus, Haire & Doolin, dry goods, Providence, R. I.; The Grant County Bank of Silver City, N. M. In the principal trades they were as follows: General stores 40; grocers 34; clothing and cloths 28; liquors 17; dry goods 15; shoes 13; hardware and agricultural implements 11; manufacturers 11; hats and caps 10; drugs 6; fancy goods 5; furniture 5; harness 5; lumber 5; produce and provisions 5; tobacco and cigars 4; books, stationery, etc., 4; jewelry 4; grain and flour 4; banks and bankers 4; bakers and confectioners 3; carriages 3; commission 3; hotels and restaurants 3; paints, oils, etc., 2; plumbers 2.

ALABAMA.

GREENVILLE.—J. A. Reid & Brother, hardware, have assigned.

MONTGOMERY.—Hughes & Wisdorn, restaurant, have been closed by the sheriff.

ARKANSAS.

HAMBURG.—W. E. Guise, general store, has assigned.

LITTLE ROCK.—Richmond & Allen, drugs, have assigned.

LITTLE ROCK.—S. L. Spears, confectioner, has been attached.

MADISON.—W. M. Koger, general store, owes about $10,000; assets about $5,000.

WALDRON.—Smith & Huey, general store, have assigned.

CALIFORNIA.

BOSTON.—Arrington Brothers, wholesale shoes, offers 50 cents. Liabilities $27,743; assets $24,205.

BOSTON.—William E. Bicknell, grocer, is in insolvency. Liabilities $7,617.

BOSTON.—E. D. Chapin & Co., wholesale produce, have failed.

BOSTON.—T. H. Murch & Co., saloon, have been petitioned into insolvency.

BOSTON.—Page & Pike, liquors, have failed and dissolved. Liabilities about $13,000, of which $7,000 is due to Starkweather & Co., of New York, in addition to a bill of sale which they held for four years, and on which they secured nearly all the stock.

BOSTON.—The Prusha Rubber Clothing Company has failed, and offers 20 cents in notes at three, six and nine months, indorsed, or in cash less nine months' interest at 6 per cent. Liabilities about $13,000.

BOSTON.—Michael Sullivan, liquors, has failed and will go out of business.

BOSTON.—Isadore Weiss, manufacturer of hats and caps, has failed. Liabilities $6,339; assets $2,607. The creditors are offered 20 cents in sixty days.

BRIDGEWATER.—T. A. Tripp, saloon, has been attached. Liabilities about $3,000; assets $800. One of the creditors offers 25 cents.

CHELSEA.—The liabilities of George D. Emery, lumber, are $250,000; nominal assets $275,000.

EAST BROOKFIELD.—Joseph Mullen, woolen manufacturer, has failed. He began in 1876. He valued his machinery at $27,000.

LAWRENCE.—Morris G. Hardy, furniture, is in insolvency. Liabilities $1,051; assets $203.

LYNN.—Tyler & Frost, shoe manufacturers, have failed.

MILFORD.—E. B. Mead, builder, is reported offering 15 cents. Liabilities about $2,000.

SPRINGFIELD.—H. K. Bellowes, grocer, has failed and filed a petition in insolvency.

SPRINGFIELD.—Frank Winn, harness, has been sold out by the sheriff.

WESTFIELD.—The Osden Whip Company has assigned.

WORCESTER.—Creditors have filed a petition in insolvency against Hubley & Co., peddlers' supplies.

WORCESTER.—S. F. Robinson & Co., tailors, have failed. Liabilities reported at $6,800.

MICHIGAN.

ADRIAN.—A. Sigler, jeweler, has given a chattel mortgage for $5,000.

ALPENA.—James W. Sherwood, hotel, has assigned to Charles B. Greeley.

ANN ARBOR.—M. B. Kelley & Co., dry goods, have assigned to Edward Duffy.

BAY CITY.—William Sullivan, plumber, has assigned to John C. Meadock.

BOYNE CITY.—W. T. Addis, general store and shingles, has assigned.

CADILLAC.—E. (Mrs. Julius) Baruch, dry goods, has assigned.

CADILLAC.—W. E. Hunt, jeweler, has assigned.

CLIFFORD.—McKenzie & Smith, drugs, have assigned.

DECATUR.—B. W. Lee, drugs, offers 25 cents. Unsecured liabilities $1,218; assets $315.

DEERFIELD.—Charles F. Blivens, general store, has assigned.

DETROIT.—C. A. Crongeyer, jeweler, has been sold out under a chattel mortgage.

FIFE LAKE.—The liabilities of F. D. Caulkins, drugs, are $2,176; nominal assets $2,080.

ISHPEMING.—Lesser & Wisotzky, dry goods and clothing, have assigned. Liabilities $40,000; assets unknown.

KINGSTON.—C. E. Scott, general store, has assigned.

MILFORD.—James Rutherford, hardware, offers 75 cents.

ONONDAGA.—W. C. Colby, grocer, has assigned.

SOUTH ARM.—John Munro, Sr., saw mill and general store, has assigned to H. R. Harmon. Liabilities estimated at $35,000.

MINNESOTA.

BRAINERD.—C. A. Loomis, grocer, has assigned.

MINNEAPOLIS.—Thomas Burt & Hamlin, commission, have been attached.

MURDOCK.—Robert Daire, hardware and lumber, has assigned.

ST. PAUL.—J. E. McFadden, saloon, has been closed by the sheriff.

MISSISSIPPI.

VICKSBURG.—Ryan & Brother, sash, doors, etc., say they have not suspended, as previously reported, and are ready to pay all obligations. They lost $5,000 by the failure of the Mississippi Valley Bank, but it did not interfere with their business.

MISSOURI.

CAMPBELL.—J. T. Lasswell & Co., dry goods and general store, have assigned.

CARROLLTON.—H. A. Salger & Co., harness, have assigned.

KANSAS CITY.—C. H. Darber & Co., saloon, are reported to have left town.

NEVADA.—Romaine & Albright, hardware and agricultural implements, have assigned.

PLATTE CITY.—George T. Jones, grocer, has compromised at 50 cents.

SPRINGFIELD.—J. W. Levy, clothing, has sold out and been attached.

ST. CHARLES.—Charles J. Brenner, hardware, has assigned. He is also in the agricultural implement business as C. J. Brenner & Co.

ST. LOUIS.—Alvin Keil, merchant tailor, has assigned to Henry Katjohn.

MONTANA.

DILLON.—E. W. Butts, furniture, has been attached.

DILLON.—Kirkpatrick Brothers, general store, have assigned. Their solvency was questioned six months ago, when they owed upward of $30,000 and had assets $39,000.

FORT BENTON.—W. S. Wetzel, grocer, has assigned.

NEBRASKA.

DAVID CITY.—Marcheck & Humpal, shoes, have failed.

OMAHA.—Julius Treitschke, wholesale liquors, has been closed by attachment. He previously mortgaged his stock to his wife for $9,000.

PAWNEE CITY.—Wesley Saunders, mason, is reported to have left town.

NEW HAMPSHIRE.

CONCORD.—George H. Moore, shoes, who recently assigned, has a stock of about $10,000, and if sold to advantage it is thought will nearly cover liabilities.

NEW JERSEY.

NEWARK.—Louis Davis, clothing, has been closed by the sheriff on judgments for $2,232.

NEWARK.—Abram B. Sanders, hardware, has been sold out by the sheriff for $3,100 on executions in favor of his father. Liabilities about $6,000; assets $3,100.

NEW BRUNSWICK.—The Home Valley Preserving Company is reported to have transferred realty and given a chattel mortgage on its personal effects. Three attachments have been issued in New York for $2,268. George M. D. Littell, the treasurer, recently failed, and their affairs were mixed.

NEW MEXICO.

SILVER CITY.—C. P. Crawford, banker and general store, has been attached for $40,000. An attachment for $8,000 was issued against him in New York city.

SILVER CITY.—The Grant County Bank, of which Newton Bradley was manager, has closed and an assignee has been appointed. It was a private bank and was started by Mr. Bradley in 1877. The average deposits were about $27,000.

SOCORRO.—The Ivanhoe Mining Company is advertised to be sold out by the sheriff on a judgment for $3,000.

NEW YORK.

ALBANY.—Michael Gunst (agent), shoes, has failed.

ALBANY.—Pedlow & Collamer, hats and caps, have assigned to John S. Wolf.

ALBION.—The schedules of Henry Stiles, shoes, show liabilities $10,472; nominal assets $7,090; actual assets $4,888.

AMSTERDAM.—A. S. Birch (J. P. Birch, agent), lumber, has assigned.

AMSTERDAM.—Jacob Fredendall, grocer, has assigned to Thomas Murphy. Liabilities $1,000; assets about $600.

AMSTERDAM.—Mrs. A. W. Kline (H. P. Kline, agent), knit goods, assigned on the 8th inst. to Julius Wasserman. The total liabilities are about $100,000; nominal assets about $72,000, consisting of real estate $51,000, mortgaged for $12,000; stock in the Manufacturers' Bank, par value, $16,000; stock in the hands of commission merchants $15,000.

AMSTERDAM.—The Manufacturers' Bank suspended on on the 10th inst., the result of the failures of the knit goods manufacturers, Clark & Kline and H. P. Kline, the father of the latter being the cashier of the bank, and the bank held considerable of his paper. The liabilities of the bank are about $135,000 and actual assets about $120,000, consisting of deposits $55,000; good collectable paper $50,000; bank building $15,000. The bank was organized in 1873, and was changed from a national to a state bank in August, 1882. Its capital was $80,000. M. L. Stover has been appointed receiver.

BROOKLYN.—George A. Probst, furniture, assigned on the 12th inst. to Adolph G. Kraetzer, Jr., with preferences for $1,430.

COHOES.—John Meikleham, hats and caps, has assigned to Michael B. Ryan.

GLOVERSVILLE.—Morris King, clothing, has assigned to Jacob Friedman, Jr., giving preferences for $7,600.

GLOVERSVILLE.—Schendell & Noah, fancy goods, have assigned. Liabilities $6,392; nominal assets $3,760.

GLOVERSVILLE.—The liabilities of Willoughby & Co., grocers, are $3,461; actual assets $707.

JAMESTOWN.—Warner & Tiffany, clothing, have closed.

KINGSTON.—Mrs. Isadore (Hannah) Corn, clothing, has assigned to W. H. Fredenburgh, giving preferences for $2,375.

LOCK BERLIN.—W. L. Stevens, grocer, has assigned.

MEDINA.—Charles S. Harris, grocer, has assigned. He is also in business at Yates.

NEW YORK CITY.—Baerman & Gersfeld, manufacturers of children's cloaks, assigned on the 10th inst to Philip Landecker, giving preferences to Siefried Elsass $3,557; Henry Schoenwald $618; Rosenberg & Co. $3,499; total $7,674. They were recently burnt out, which is ascribed as the cause of the failure. Liabilities $17,045; nominal assets $14,256; actual assets $10,389.

NEW YORK CITY.—Thomas S. Barnes, men's furnishing goods, assigned on the 10th inst to Charles Lehman, giving three preferences for $810.

NEW YORK CITY.—J. P. Billups & Co., cotton commission and export, have suspended. The firm became involved by the failures in Liverpool and elsewhere, and their bills of exchange drawn against cotton were protested some weeks ago for nonacceptance, and they had some paper which they discounted in bank also protested. The total amount of the refused bills are about $200,000. The firm have been liquidating for a month past, and say they have apportioned off part of the assets to pay certain claims. The total liabilities are nominally $600,000, including the refused bills, against which there are secured assets of $400,000, and there are also some more assets, the value of which is unknown, to meet the unsecured liabilities. The business was started here in July, 1880, by J. P. Billups, who had formerly been of Sims, Billups & Co., of Mobile; the capital was $100,000, and Alexander Burgess was subsequently admitted as partner. The firm expect to make a settlement and resume.

NEW YORK CITY.—The schedules of Charles H. Blackhurst, stair builder, show liabilities $3,682; nominal assets $2,733; actual assets $1,982.

NEW YORK CITY.—Bernhard Brod, wholesale tobacco, assigned on the 14th inst. to Morris Ullman. He failed in June, 1880, and compromised at 25 cents.

NEW YORK CITY.—Emil Brown & Co., cigar manufacturers, assigned on the 10th inst. to Henry B. Schoepper.

NEW YORK CITY.—The schedules of Campbell Brothers, hats, show liabilities $3,806; actual assets $476.

NEW YORK CITY.—The schedules of Abraham H. Carrick, wholesale millinery goods, show liabilities $11,955; nominal assets $7,338; actual assets $5,682.

NEW YORK CITY.—Simon Danzig has been removed as assignee of F. Mayer & Co., cloths, by Judge Van Hoesen, of the Court of Common Pleas, and Emanuel B. Hart was appointed in his place, on the ground of the misapplication of $15,000 trust funds which it is alleged he drew against his commissions. Mr. Hart declined to serve and Hon. Thomas L. James was appointed.

NEW YORK CITY.—The sheriff has seized the Fabric Ornamenting & Manufacturing Company on executions in favor of E. K. Hart $4,346; A. S. Warner $2,162; First National Bank of Albion $549. The company was started in May, 1881, with an authorized capital stock of $350,000, which was afterwards increased to $400,000.

NEW YORK CITY.—Charles Fox's Son & Co., manufacturers of cloth caps, made an assignment on the 11th inst. to Philip M. Platt, giving preferences for $92,781, the largest being to Philip M. Platt $11,627; Lena Cohen $5,000; William I. Fox $34,125; Alexander Rich $13,487; Delia Burnstein $14,000; estate of Charles Fox $9,510. The business was established many years ago, and since the death of Charles Fox has been carried on by his son and widow. They were also interested in the Fontaine Pin Company. They have been attached by six creditors, on the ground, as alleged, that they sold out the factory the day before the assignment, that they secretly shipped goods, and that the assignment was dated three days before it was filed.

NEW YORK CITY.—The schedules of Ludolph Friedman, jewelry and auctioneer, show liabilities $11,324; nominal assets $7,379; actual assets $2,383.

NEW YORK CITY.—Goldstein & Branner, ladies' and misses' furnishing goods, assigned on the 12th inst. to Ernest Kaufman, giving five preference for $2,365. They began in November, 1882.

NEW YORK CITY.—Samuel Greenthal, hats, assigned on the 12th inst. to Solomon Levy, giving three preferences for $810.

NEW YORK CITY.—The schedules of Stephen Harvey, brushes, show liabilities $5,887; nominal assets $9,375; actual assets $3,130.

NEW YORK CITY.—The schedules of M. Henlein & Co., wholesale hosiery, show liabilities $208,880; nominal assets $222,633; actual assets $122,461.

NEW YORK CITY.—The schedules of Seaman Jones, Jr., & Co., paper hangings, show liabilities of $6,263; nominal assets, $24,348; actual assets. $8,055.

NEW YORK CITY.—The schedules of Frederick M. Klenen, grocer, show liabilities $4,992; nominal assets $2,064; actual assets $1,384.

NEW YORK CITY.—The schedules of Klepper & Mortland, trimmings, show liabilities $6,507; nominal assets $2,940; actual assets $1,721.

NEW YORK CITY.—The schedules of La Dow & Lomas, wholesale hats, show liabilities $73,276; nominal assets $61,233; actual assets $38,490.

NEW YORK CITY.—David Lichtenstein assigned on the 14th inst, giving preferences for $6,325 to Amie Lichtenstein $1,500; Leopold Lichtenstein $1,150; Leopold H. Fishel $2,500; Marcus Silverstein $1,175.

NEW YORK CITY.—The schedules of Thomas L. McCanlis, awnings, show liabilities $7,280; nominal assets $8,282; actual assets $5,338.

NEW YORK CITY.—John Rowland & Sons, wholesale hats, assigned on the 8th inst. to George W. Farnam, giving preferences to Robert Eller $4,000; Rudolph Eickemeyer $1,000; Mary Rowland $5,000; total $10,000. The business was started about 1870 by John Rowland, who admitted his two sons in 1878. The liabilities are $41,626; nominal assets $30,310; actual assets $15,543.

NEW YORK CITY.—Samuel Shapiro, wholesale and retail clothing, assigned on the 12th inst. to Mitchell Herschfield, giving preferences for $9,925, the largest being to Wronkow & Finn $4,820; Celia Shapiro $1,500; Asher Shapiro $1,600. He commenced business on his own account last June. His liabilities are about $25,000; nominal assets $20,000.

NEW YORK CITY.—The schedules of Spiegel, Huber & Co., pictures, show liabilities $2,676; nominal assets $3,463; actual assets $2,500.

OGDENSBURG—N. M. Curtis, flour mill, did not assign, as previously reported. He bought the flour mill of J. S. Bean, run by W. S. Day, for about $30,000, Mr. Bean taking a mortgage, and agreed to give Mr. Curtis credit of $5,000 at the Ogdensburg Bank, to run the business. When Mr. Bean died the bank insisted upon Mr. Curtis giving security for the $5,000 note, which he did, but found that the Bean estate was not willing to carry out Mr. Bean's agreement, and they sued him on the note. The mill is still running, as Mr. Curtis is said to owe no debts aside from those on the mill, and he does a cash business.

SYRACUSE.—Mrs. A. Bannan, general store, has assigned.

SYRACUSE.—The liabilities of Solomon Shimberg, wholesale notions, are $105,000; nominal assets $94,000; actual assets $40,000. He offers 25 cents.

SYRACUSE.—Levi L. Silverman, jewelry and notions, owes $35,945; nominal assets $30,000; actual assets $21,820; preferences $10,170.

TROY.—E. Brownson, grocer, has assigned to H. G. Van Valkenton with preferences for $369.

TROY.—Meyer Wolf, dry goods peddler, has assigned with preferences for $1,400.

UTICA.—Frank Herthrum, grocer, has assigned to Leslie R. Graves.

NORTH CAROLINA.

GREENVILLE.—A. W. Burhams, general store, has assigned.

GREENVILLE.—R. C. Clowes & Co., general store, have assigned.

HAMILTON.—W. J. Clary, general store, has assigned, with preferences for $1,000. Liabilities $7,000. It is thought he will pay 50 cents.

PLYMOUTH.—W. B. Harrison, grocer, has assigned.

TARBORO.—Joseph L. Coker, grocer, has assigned. Liabilities $667; assets $700.

OHIO.

AKRON.—Tullidge Brothers, liquors, gave a chattel mortgage for $3,000 and failed.

AMHERST.—J. Hildebrand, grocer, has assigned to H. G. Redington.

CINCINNATI.—M. R. Conway, trading as M. R. Conway & Co., machinist, has assigned to A. A. Ferris.

CINCINNATI.—Joshua Davis, beef packer, gave a bill of sale to Ella P. Davis, and assigned to O. P. Cobb.

CINCINNATI.—John Scherer, groceries and saloon, gave chattel mortgages for $1,782 and assigned.

CINCINNATI.—Patrick Sullivan, shoe manufacturer, has assigned to John B. Mannix.

CINCINNATI.—C. B. Unzicker, drugs, has assigned.

DEFIANCE.—W. H. Stryker, grocer, has been closed by the sheriff.

FREMONT.—J. E. Driesbach, plumber, has assigned.

HICKSVILLE.—Dillworth & Maxwell, general store, have failed.

HUNTSVILLE.—W. T. Tarbutton, grocer, has assigned.

LIMA.—Mathias Atmer, planing mill, has assigned to Samuel Collins.

MIDDLEPOINT.—S. W. Atkinson & Son, general store, have assigned.

NEWARK.—T. J. Cherry, hats and caps, has been closed by the sheriff.

NORWARK.—Maggie Coe, millinery, has assigned to B. D. Patrick. Liabilities $1,500; assets $1,000.

PAULDING.—J. P. Gasser, general store, has been placed in the hands of a receiver.

PICKERINGTON.—E. D. Kramer, general store, has assigned.

PORT CLINTON.—George Bredbeck, hardware, has failed.

RIPLEY.—Voorhies & Son, grocers, have assigned.

TOLEDO.—Louis Franc, hats and caps, has assigned to Joseph Roemer.

TOLEDO.—A receiver has been appointed for A. M. Heflebrower, bakery and cafe.

UPPER SANDUSKY.—Lauterminch Brothers, marble, have assigned.

WEST BALTIMORE.—Oscar Boughman, saloon, has assigned.

WEST LIBERTY.—J. W. Demory, hardware, has assigned.

OREGON.

EAST PORTLAND.—The liabilities of C. S. Myers & Co., general store, are about $3,500; assets $1,585.

PENNSYLVANIA.

ALLEGHENY.—William Spangenberg, grocer, has been closed by the sheriff.

ALTOONA.—W. F. Cutler, manufacturing confectioner, has assigned.

BETHLEHEM.—Jacob Doutrich, merchant tailor, has been closed by the sheriff.

BRADFORD.—Thomas Kerwin, oil producer, has assigned to S. M. Reed. Liabilities about $52,000; nominal assets $65,000. He expects to pay in full, and says his property was in such a shape that he was unable to realize without more time.

CANTON.—A. D. McCraney & Co., liquors, are advertised to be sold out by the sheriff.

CURWENSVILLE.—W. H. Thompson, shoes, has had execution issued against him on judgments for $2,300.

HARRISBURG.—Vance & Whiteside, coach makers, have been closed by the sheriff.

HOLLIDAYSBURG.—W. E. Curry & Brother, grocers, have been closed by the sheriff.

HOLLIDAYSBURG.—Charles H. Miller, grocer, has been closed by the sheriff.

McKEESPORT.—J. W. Bradshaw, planing mill, has been closed by the sheriff.

NORTHEAST.—D. A. Swaney, trading as D. A. Swaney & Co., manufacturers of paper, are reported to have been closed by the sheriff on a claim for $6,000.

PHILADELPHIA.—Barnard & Roberts, brokers and millers' agents, recently called a meeting of creditors. Barnard is said to have disappeared, taking some $3,000 to $4,000 of the firm's funds, besides leaving behind him other unpaid obligations. The amount of the firm's indebtedness is said to be about $10,000.

PHILADELPHIA.—Harry C. Barrett, hardware and house furnishing goods, was recently sold out by the sheriff under $1,200 judgment, held by C. O. Barrett, his brother. Assets estimated at $1,000 and liabilities $1,500.

PHILADELPHIA.—Robert Black, manufacturer of cigars, was recently closed by the sheriff under judgment execution for $415 in favor of E. Batchelor. The sheriff's appraisement valued stock, etc., at $161, and, under exemption laws, Black retained them. Liabilities about $500.

PHILADELPHIA.—Callaman Cohn, wholesale optical and fancy goods, was advertised to be sold out by the sheriff. His bookkeeper, who managed the business for him, is said to be a preferred creditor for $3,816. It is thought he may be able to effect a compromise of about 20 cents with unsecured creditors. The failure was not unexpected.

PHILADELPHIA.—Edward J. Carlin, flour and grain, has been sold out by the sheriff.

PHILADELPHIA.—Mr. Peirce Drellan, cigars and saloon, who was recently advertised to be sold out by the sheriff, satisfied the judgment and the sale was declared off.

PHILADELPHIA.—J. E. Goodman, cigars, is advertised to be sold out by the sheriff on the 18th inst.

PHILADELPHIA.—Edward Heald, manufacturer of cotton and woolen goods, has become financially embarrassed. Liabilities $40,000, of which $8,000 is for borrowed money. His machinery cost $34,000, is clear, and he thinks he has a margin in stock with agents. The suspension is attributed to depression in trade, causing a falling off in the demand for goods.

PHILADELPHIA.—Franklin McCalla, shoes, is advertised to be sold out by the sheriff on the 18th inst.

PHILADELPHIA.—Joseph C. Lukens, grocer, having failed to effect compromise at 40 cents, has sold out to Jonathan C. Lukens. Liabilities $6,000, of which $4,000 is borrowed from his father; assets $1,200.

PHILADELPHIA.—Charles O. Merbitz, hats, has compromised at 20 cents and sold out.

PHILADELPHIA.—Michael J. Moloney, shoes, was not sold out by the sheriff as advertised, but compromised at 25 cents to unsecured creditors at four months, and 50 cents to secured creditors.

PHILADELPHIA.—Execution for $2,371 has been issued against H. W. Munson, 99 cent store.

PHILADELPHIA.—The Peerless Manufacturing Company, gas machines, is advertised to be sold out by the sheriff on the 17th inst.

PHILADELPHIA.—The machinery, stock, etc., of George W. Stead, yarn manufacturer, which was recently sold by the sheriff, was bought in by Isaac Stead, trustee for Mrs. George W. Stead. The effects are said to have brought about $11,000.

PHILADELPHIA.—James W. Vaters & Co., fancy leather works, have been closed by the sheriff on executions for $6,500. Liabilities about $12,000; assets nominally $11,000.

PHILADELPHIA.—Weaver Brothers, grocers, of Germantown, were sold out by the sheriff on the 12th inst. There appeared on record two judgments for $525 each against them in favor of M. A. Weaver, a relative.

PHILADELPHIA.—At a meeting of some of the principal creditors of William M. Wilson & Co., importers and wholesale drugs and chemicals, held on the 8th inst., the firm claimed liabilities of $81,000, and assets of $60,000, consisting of merchandise $32,000, and book accounts $28,000. They are offering to compromise at 33 1-3 cents in six, twelve and eighteen months, ordinary notes, unsecured, and the balance, 66 2-3 cents, at the expiration of five years.

PHILADELPHIA.—Wolff, Randolph & Co., manufacturers of leather varnishes, etc., have failed and called a meeting of creditors. It is thought they will obtain an extension on the basis of 50 per cent. The firm recently gave five judgments to Walter Wood, amounting to $6,727.

PITTSBURGH.—Execution has been issued against Thomas Jones, merchant tailor, for $7,700 in favor of Hugh McDonald.

PITTSBURGH.—J. & D. Miller, bottlers, have been closed by the sheriff.

PLEASANTVILLE.—Samuel Chestnut, shoes, has failed.

POTTSTOWN.—Allen Edelman, shoes, has been sold out by the sheriff.

READING.—The Union Foundry & Manufacturing Company has had judgments entered against it for $6,016 in favor of Christian Stoltz, the president, and $10,250 in favor of John Keppelman.

SCRANTON.—Execution has been issued against Watson & Barber, hardware, for judgments for $2,532.

TITUSVILLE.—N. P. Nelson, grocer, has sold out, and is said to be unable to pay his debts.

WELLSBORO.—Execution has been issued against Brewster & Alexander, harness, on judgments for $914.

WEST CHESTER.—J. T. Hoopes, grocer, was sued, and has sold out to his father, who has a claim of $2,000. Total liabilities $3,000; assets $325.

WILLIAMSPORT.—Henry Wenner, clothing, has been closed by the sheriff on confessed judgments for $4,000.

RHODE ISLAND.

PAWTUCKET.—Joseph W. Gagnon, liquors, has assigned to J. Robinson. Liabilities $12,000; assets, stock, $7,000; receivables $8,000; real estate $10,000, mortgaged for $5,000.

PROVIDENCE.—Denison & Co., furniture, have assigned to Walter B. Vincent.

PROVIDENCE.—McManus, Haire & Doolin, dry goods, were attached on the 8th inst. and assigned to J. M. Ripley. This firm estimate the liabilities at $125,000 and assets $160,000. They were damaged by fire on the night of the 8th inst. to the claimed amount of $10,000, fully insured.

PROVIDENCE.—Arthur Moore, manufacturing jeweler, has failed and closed out.

PROVIDENCE.—Julius Moral, Union Nickel Plating Works, has assigned.

PROVIDENCE.—G. Schoolman, peddler, has assigned.

PROVIDENCE.—S. Wheaton & Son, grocers, have assigned to Nelson Viall.

WARREN.—B. McCusker, grocer, has assigned.

SOUTH CAROLINA.

BAMBERG.—S. W. Johnson, general store and hotel, asks an extension, showing nominal assets $7,000; liabilities $4,000.

KINGSTREE.—R. A. Murphy, general store, has assigned.

LANCASTER.—Twitty & Conness, general store and bankers, who recently sold out to B. D. Heath & Brother, have made no proposition yet to their creditors. The liabilities are thought to be large and available assets small.

MARION.—M. F. Martin, general store, has been closed by the sheriff.

SUMTER.—Wroton & Eberhardt, green grocers, have failed.

TENNESSEE.

COLUMBUS.—W. E. Brown, dry goods, has assigned. Liabilities $13,000; assets $6,000.

TEXAS.

AUSTIN.—B. Melasky & Son, clothing, have assigned. They have been in businsss over twenty years. They have a branch at Taylor.

DAWSON.—Hollinger & Sims, general store, have failed.

GIDDINGS.—The liabilities of P. Sass, general store, are reported at $30,000; assets $20,000.

HILLSBORO.—D. Derden, dry goods, asks an extension.

MARTIN'S MILL.—G. Douglass, general store, has been attached.

MILANO.—Carnes & Saunders, general store, were burnt out and attached.

NAVASOTA.—T. Nash, grocer, has been closed by the sheriff.

NAVASOTA.—H. Weltman, grocer, has assigned.

SHERMAN.—Levy & Ripenski, dry goods and clothing, have been attached for $8,000. Liabilities $15,000 to $20,000; assets about $7,000.

WACO.—C. A. Reynolds, saloon, has assigned.

UTAH.

LOGAN.—Ricks Brothers, general store, have assigned.

RICHMOND.—Cornelius Traveller, general store, has assigned.

VIRGINIA.

LEESBURG.—Hammerly & Brooks, clothing, have failed. Suits for $2,000 were begun against them.

LEXINGTON.—Morse & Eads, general store, have assigned to Joseph White. Liabilities reported at $4,000; assets $2,000. It is said they will pay 70 cents.

WEST VIRGINIA.

MORGANTOWN.—John Good, grocer, has been closed by the sheriff.

MOUTH OF SCARY.—Joseph E. Sims, lumber and general store, has assigned.

WISCONSIN.

APPLETON.—Emerson & Brecke, clothing and shoes, have assigned.

MADISON.—C. A. Damon, tailor, has been closed by the sheriff for $4,000 borrowed money.

MANITOBA.

BLUMENORT.—Lobsinger & Uhrich, shoemakers, have assigned.

WINNIPEG.—Gill & Atkinson, contractors, have assigned.

NEW BRUNSWICK.

FREDERICTON.—L. W. Sherman, lumber, owes $10,000; actual assets $3,000.

NOVA SCOTIA.

ACADIA MINES.—The Steel Company of Canada (Limited) has been attached for $103,000. Gillespie, Moffatt & Co., of Montreal, made application to wind up the company, to which it assented on certain conditions.

SYDNEY.—Burchell Brothers, flour, have failed.

SYDNEY.—Burchell, Matheson & Co., dry goods, have failed.

SPRING HILL.—Walter S. Fraser and wife, millinery, have assigned.

PROVINCE OF ONTARIO.

BRADSTREET'S:

A Journal of Trade, Finance, and Public Economy.

PUBLISHED BY THE BRADSTREET COMPANY,
279, 281, 283 BROADWAY, NEW YORK.

Terms, $5.00 per year in advance, including postage.
SINGLE COPIES, TEN CENTS.
SPECIMEN COPIES WILL BE SENT FREE UPON APPLICATION.

As a financial and commercial newspaper the foremost purpose of BRADSTREET'S is to be of practical service to business men.

Its special trade and industrial reports; its weekly epitome of bankruptcies throughout the United States and Canada, and the summaries of assets and liabilities, are alone worth the subscription price.

The synopses of recent legal decisions constitute an exceedingly valuable feature.

As commercial transactions, in the wider sense, are coming to be more and more conducted on a statistical basis, the information contained in BRADSTREET'S is of the first importance both to producers and middle-men.

THE TRADE AND AGRICULTURAL SITUATION THROUGHOUT THE UNITED STATES AND CANADA IS REPORTED BY TELEGRAPH TO BRADSTREET'S UP TO THE HOUR OF PUBLICATION.

SINGLE COPIES 10 CENTS.

All communications regarding editorial or literary matters should be addressed to the Editor; all others to the Publishers.

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 22, 1883.

NOTES OF THE WEEK.

We are at present endeavoring to collect from official and other sources accurate information concerning the cost of making iron in the various localities in which the industry is carried on in the United States. The matter, we need hardly say, is of the first importance in relation to the tariff question, which is now in a fair way to become a living issue before Congress and the people. The information collected cannot fail to be of peculiar value to Congress in revising the iron and steel schedules. It will also be of general interest as going to show the relative importance of the recent development in iron production in the south as an element in the general iron situation. We will welcome information on the subject from any quarter.

As revealed by our Washington correspondent, the prospect is that Congress will be so overburdened with propositions of every sort that little or no business legislation will be passed at this session. It is true that considerations as to political expediency will do much to prevent effective work, but the chief hindrance to progress is the unwieldy character of a large popular assembly like the House of Representatives. The English House of Commons at its last session was only able to perfect and pass a bankrupt bill by handing the work over to a special committee, made up of members having both a theoretical and practical knowledge of the subject. The conclusions of the committee were accepted as conclusive. The questions confronting the legislatures of to-day are altogether of the administrative and business sort. To effectively dispose of them an improved organization and mode of treatment is necessary. The remedy is to make the work of special committees more authoritative. Beyond this there must be worked out ways and means of getting at the business sense of the community on controverted questions. The convention which will be held at Washington in January to consider the bankruptcy question is an illustration in point. If the business men throughout the country were thoroughly organized to that extent the convention would voice the judgment of men of business in general. A closer organization of the commercial community will come about naturally as the need for it increases.

Charges have been made during the week that the chief executive of one of the Pacific railways has been making a private fortune through speculations on the bear side in the stock of his own company. This may or may not be true, but the freedom with which such charges are from time to time made illustrates the need of some prompt method of determining their truth or falsity. This, not in relation to the case indicated alone, but for all abuses of like character. It is known that such things have been done in the past, and to an extent that makes clear the necessity of society's guarding against them for the future. When a hungry man obtains a loaf of bread by false pretense he is very liable to arrest and punishment. The remedy in such a case is comparatively simple. It is not so easy to provide an adequate remedy against the acts of railway managers who to fill their own pockets play fast and loose with the properties intrusted to them. Yet this must be done, and especially in the United States, if our railway securities are to furnish the safe investments so much needed. Those who are charged with the direction of public affairs in the legislatures of the country are confronted with no more important duty than that of providing checks against the abuses indicated above.

The proceedings of the Board of Apportionment—the only semblance of a local legislature left to New York city—will illustrate the absence of well defined responsibility in the city's government. Naturally, as it becomes known that the city is being robbed in manifold ways the demand for some sort of charter legislation increases. There exists, therefore, a greater need of care in framing such legislation. Owing to the nature of the subject it were better not to meddle from Albany until the way is made clear for a radical and enduring reform. Such a reform would first take account of the original error of supposing that the bad city government could be guarded against by getting rid of the representative principle in part. A prime difficulty in dealing with the New York City problem lies in the fact of the state legislature being usually in the control of the Republicans while the city vote is largely Democratic. The original interference at Albany came from the Republican party. During recent years the spoils of the city government have been divided to a considerable extent among the managers and workers of both parties. The need of the hour is the advent of the man or men at Albany who, rising to the full dignity and importance of the question, will give to the first city of the state and country a free working system of government whose success or failure will entirely depend upon the city's capacity for self-government.

One of the abuses in administration to which our otherwise admirable common school system has shown itself liable is the providing costly education in the higher grades at the expense of the purely elementary training which it was the main object of the system to supply. A very pertinent illustration of the tendency was revealed in the course of the proceedings of the New York City Board of Apportionment on Thursday. A delegation of Commissioners of Education, in asking the board for an increased appropriation, stated that there were from 15,000 to 20,000 children in the city unprovided with school accommodations, and that for want of a sufficiency of room it had become necessary to fill the assembly rooms with pupils, thus endangering their health. Thus a city which maintains a free college for the education of young men at a large annual expense, cannot find healthful accommodations for its children, and is compelled to exclude many thousands of these from its primary schools. The mere statement of the facts renders comment superfluous. There is need of a speedy reform in this matter if our school system is to maintain its usefulness.

According to the last reports received fighting has at length begun in the East. The French, it appears, have captured some of the enemy's outposts at Sontay. The war policy appears to be strongly supported at home. Reinforcements are to be sent to Tonquin within the next fortnight. On Thursday last two credit bills, one for 9,000,000 francs and the other for 20,000,000 francs, were adopted by the Senate, the latter bill passing by a vote of 215 yeas to 6 nays. In urging the passage of the bills Premier Ferry said that the question at issue in the East was one of colonial preservation. He expressed the opinion that there was no reason for entertaining the fear that France's action in Tonquin would affect her relations with the other European powers, and declared that no European cabinet had displayed discontent or ill-will in regard to the dealings of France in the East. He urged the Senate to vote the credits with the largest possible majority, in order that the government might be enabled to negotiate first and fight afterward if necessary. Admiral Jaureguiberry insisted that either the credits should be voted or France should abandon forever her influence in her Indo-Chinese possessions. If necessary, he said, France could wage a successful war without blockading Chinese ports or ignoring the rights of neutrals. He refused to believe in the ill-will of England, who, he said, could only gain by the opening up of Tonquin.

These statements and arguments were called forth by the remarks of the Duc de Broglie, who voted with the minority. He declared that he voted against the credit because he thought the present an inopportune moment to launch a war against China. He called attention to the fact that France is surrounded by monarchies hostile to a republican form of government, and that, therefore, it behooves her to be careful at home and abroad. He implored the Senate not to leave the door open for foreign interference. The Senate, however, was in no humor for taking to heart politic considerations like those urged by the Duc de Broglie, and the credits were voted, The considerations of external policy upon which the speaker laid stress are not the only ones which should induce the French government to hasten slowly in the Tonquin matter. Reasons as cogent, if not more so, exist in the present economic condition of France. The revenue has been showing a decline in the face of increasing expenditures. Attempts are being made to cut down expenses, but it is found that very little can be done in this way. Increased taxation is not proposed, probably through fear that the results would be disastrous. It is asserted that the last French loan is still unplaced with the public, and that the government has had in view, in recent negotiations for the increase of the note issue of the Bank of France, the idea of borrowing from that institution. The records of French trade for the past few years are also far from satisfactory. The London *Statist* in a recent issue devoted some space to an analysis of these records for eight years back, and showed that not only is France consuming more than she produces but that she is only able to maintain her exports by purchases from other countries. It is questionable whether France is, just at present, in a condition to engage in a war of any magnitude. It is certain that, in the event of a prolonged struggle, her resources are likely to be strained to the utmost.

BIRTH OF ANOTHER NATION.

The Sydney, Australia, correspondent of BRADSTREET'S has referred to the assemblage in that city of the Australian conference to consider the question of annexing New Guinea and such other Pacific islands as might be deemed essential to the maintenance of the supremacy of the Anglo-Saxon race in that vast and practically unexplored and unoccupied region of the globe.

Our well-informed San Francisco correspondent sends us some interesting details regarding it. The conference was constituted of representatives of all the self-governing colonies and the crown colonies of western Australia and Fiji. The delegates, with a single exception, were members of colonial administrations, and came with full authority to act for their respective commonwealths. That exception was Mr. Whitaker, until a few weeks since Premier of New Zealand, one of the most sagacious men that has ever been engaged in the management of public affairs in any British colony. This gentleman, from his long experience in public life and his legal training, was deemed indispensable by the New Zealand government, and, although he had voluntarily resigned office, his services were sought for as joint representative of his own country with the present Premier. The conference, as a whole, was composed of eminently representative men.

The work of the conference was twofold. The first and most pressing had reference to the annexation of New Guinea and other Pacific islands, and to the necessity of preventing France establishing penal colonies in them. Upon these points the conference was unanimous, and pledged the colonies to bear a fair proportion of the cost to the imperial government of carrying out this policy. Public opinion is very strong and united in the colonies upon the question of annexation and French aggression, and the Marquis of Normanby, governor of Victoria, voiced the sentiments of the colonists at large in his vigorous protest when closing the Victorian Parliament a few weeks ago. He said:

The importance which was attached to the question of the annexation of New Guinea and other islands of the western Pacific at the opening of Parliament has been intensified by the action of the French nation in proposing to deport thither her vilest and worst criminals, notably those who are deemed so far steeped in crime as to be unfit to be retained within the territorial limits of the republic. It is of vital importance to the Australian colonies, containing a British population of over 3,000,000 souls and representing the best enterprise of the mother country, that those lands should not become possessions of a foreign power, and that such a sink of moral pollution should not be permitted to exist at the portals of our southern Britain. With a deep feeling of this threatened wrong and a strong sense of the lasting national misfortune that would be entailed upon us all, the various colonies have already strongly remonstrated with the Imperial authorities, and a convention comprising representatives of those colonies which are now about to assemble at Sydney will deal specially with the matter as well as the question of federation. This will be the means, I hope, of inducing the mother country, upon whom the duty rests of conserving the national character of this portion of the empire, to take effectual measures in order to avert such a calamity. * * * Whether our object be attained by annexation or the establishment of a protectorate is not material. Our aim and end should be to prevent an occupation of the islands by foreigners, as such occupation would be a standing menace to our peaceful shores. We must also avert the infiltration of criminals into our colony, the effects of which have already been experienced by us.

The conference, acting in the spirit of this protest, formulated a policy for the joint administration of the western Pacific islands by the imperial government and the Australasian federation.

But the second part of the conference work is by far the more important. It formulates a plan of federation, and a bill embodying it has been drafted for presentation to the Imperial Parliament. A federal council is to be formed, composed of two representatives and one crown nominee from each colony. In other words, the Federal Council will be composed of twenty-four members, the numbers increasing as new colonies are constituted on the Australian mainland. The crown will be in a perpetual minority, should the representative members act in harmony. But the royal assent is needed before any act of the Federal Council becomes effective, and in every instance the decision of the council, so approved, must be given through the governor of the colony where the council may be sitting. This will prevent any local jealousy arising to mar the colonial harmony. The right of revision by the crown is also preserved.

The legislative functions of the Federal Council are broad enough for all practical purposes, and include, first of all, the relations of the colonies toward the various islands in the western Pacific. If the Imperial Parliament enacts the bill drafted by the conference, therefore, the imperial government will be compelled to give effect to the foreign policy of the Federal Council, because the crown, being represented therein, would hardly venture to veto any of its acts. To do so would be to drive the colonies a step forward toward complete independence, and this the British government is not prepared to do, having long since seen the folly of the separation "fad" of Goldwin Smith and the "Manchester school" of politicians, who declared that the colonies were an expense to the mother country and should be cut off, simply because imperial policy had provoked a costly war in New Zealand.

In matters of common interest to the colonies, in which uniformity of practice is desirable, the Federal Council is also to have legislative authority. The subjects are marriage, divorce, naturalization, enforcement of criminal processes, extradition, colonial defences, quarantine regulations, patents, copyright and bills of exchange. The importance of this departure to the commercial and social life of the Australasian colonies cannot be overestimated. It will simplify proceedings and give greater security in all the relations of life. In some respects this federal scheme is superior to that of the Dominion, where the Ottawa government is centralizing authority all the time. In the Australasian federation the colonies retain their autonomy and are free to work out their own destiny in their own way. The Federal Council will have nothing to do with revenue and taxation. It will have no executive functions, but its legislation upon the points reserved to it will be equally binding upon all. Thus are secured all the advantages of federal union with local self-government to the fullest extent.

In this connection it may be proper to add that Herbert Spencer and other great thinkers of England have expressed themselves in favor of the annexation policy of Australasia. Sir George Grey, the "great pro-consul," as Mr. Gladstone styled him, now a settler in New Zealand, who has taken the lead in this question, is in receipt of large numbers of letters from Fiji, Samoa and other islands of the Pacific strongly urging the adoption of a federal policy. All of which points to the establishment of a great Anglo-Saxon dominion in the south and western Pacific in the not distant future. It is to the interest of the United States that this should happen, because our statistics prove incontestibly that our best customers are English-speaking communities all over the world.

THE SPEAKER AND THE TARIFF.

Since the election of Mr. Carlisle to the speakership the opponents of revenue reform have been industriously laboring to spread abroad the belief that the business interests of the country are in immediate danger from congressional action. Declarations have been made to the effect that Mr. Carlisle is the exponent of a revolutionary policy regarding the tariff, and that he will use every means in his power to give that policy instant and extreme expression in legislation. Similar statements were used as arguments both within and without Mr. Carlisle's own party to defeat his candidacy, with what success we have already seen. This, of course, was to have been expected. It is well understood that many statements are made before election, especially in this country, which will not bear examination thereafter, and such are quietly forgotten when they have served their temporary purpose. It has been otherwise, however, with the statements regarding Mr. Carlisle's position referred to above. A leading Democratic journal of protectionist views styles the recent action of the Democratic members of Congress, having reference, of course, to its supposed probable consequences, a "new departure," indicating thus that a radical change of policy is anticipated. On the other hand the protectionist journals of the opposing party have been "facing the issue" in the most approved fashion in editorials of an alarmist tendency, calculated to fire the American heart.

It is difficult to discover any grounds for the statements above mentioned. They seem, when not the outcome of mere clamor, to have arisen from a desire to forestall the action of Congress by an appeal to the fears of business men. It is certain that no basis is to be found for them either in the present situation of parties or in what is known of the views of Mr. Carlisle. The Democratic party has so long played fast and loose with the tariff issue that people are unwilling to believe that the party has taken up a definite position upon the subject. But even if the position of the Democrats upon the tariff question were well defined, it would be unreasonable to suppose that they would make any radical and sweeping changes in the tariff schedules. Except in times of great public excitement, such as come at comparatively rare intervals in any country, the dominant party in a state usually acts under the influence of a certain sense of responsibility inseparable from the possession of power, and there seems to be no reason to fear that the guidance of this sense will be wanting to the majority of the House of Representatives in the present conjuncture. Besides, the Democrats, although controlling the organization of the House, are in a minority in the Senate, and have not yet secured the presidency. They can, therefore, carry through no legislation upon the tariff by a mere party vote. Moreover, an additional political consideration of much force will operate to restrain any very radical tendencies. Next year is the presidential year, and the party leaders, being on their good behavior, will take care not to offend the conservative sense of the country by the proposal of measures involving sweeping changes.

As we have intimated above, what is known regarding Mr. Carlisle's views upon the tariff affords no ground whatever for the alarm with which people in some quarters affect to regard his position. That position was clearly outlined in speeches made by him in the course of the tariff debates last year. In announcing the principles upon which, in his judgment, a tariff system should be based, he said:

I am one of those who believe that the power of taxation can be legitimately employed only for public purposes, or, in other words, that the object of all taxation should be revenue—revenue only, if you please; but if, with this primary object in view, the taxes or duties can be so adjusted as to aid our industries without imposing any burdens upon the people beyond what otherwise would have been necessary, there is nothing in the policy advocated by those who demand a reform in the tariff to forbid their encouragement or protection to that extent; and I think it can be demonstrated, so far as facts and figures can demonstrate any proposition upon such a subject, that such a policy would afford all the protection that any legitimate and well-conducted industry needs in this country. I do not recognize a principle that would impose a duty above the revenue point merely for the purpose of giving what is called protection.

If now for the first time the country were called upon to declare a principle or to inaugurate a policy Mr. Carlisle said he would not hesitate to announce his adherence to "that creed which demands the largest liberty in trade" and "which invites the producer and consumer to meet on equal terms in a free market for the exchange of their commodities." He recognized, however, that the question is not a new one; that under the protective policy heretofore adopted important vested interests have grown up which should not be summarily and arbitrarily interfered with, and that such changes in the tariff system as have been rendered necessary by time and circumstances should be gradually made. On the last day of the last session of Congress he made the following statement as to the course which he thought proper to be pursued in dealing with the difficult matter in hand. As will be seen his declaration has particular interest now:

If this question were in my hands to-day I would not make radical changes at once, but would proceed by cautious and conservative methods to relieve the people from taxation and to reduce the revenues of the government without injuring or alarming the industrial interests of the country. We must recognize the facts that large interests have grown up under the existing conditions; that they have been encouraged by it, and that they have so adjusted themselves as to be dependent upon the assurance that it will not be suddenly swept away. While I should strenuously insist upon actual and substantial reductions, I would be willing to accept very reasonable and moderate methods as satisfactory indications of a fixed purpose to relieve the people at large without embarrassing special interests. The business of the country will soon adjust itself to any reasonable change, but it must be more or less injured by the agitation which inevitably results from persistent refusals to settle our revenue system upon a just and permanent basis. The people demand justice and stability in tariff legislation, and when these essentials shall have been made the industries of the country will no longer require the interposition of the government to force prices up and give them control of the home market, but will become self-reliant and self-sustaining.

A similar statement was made by him in his speech on taking the speaker's chair, in which, after declaring that sudden and radical changes of the laws and regulations

affecting the commercial and industrial interests of the people ought never to be made unless imperatively demanded by some public emergency, he said that, in his opinion, "under the existing circumstances, such changes would not be favorably received by any considerable number of those who have given serious attention to the subject."

These extracts are sufficient to show that there is no reasonable ground for uneasiness as to the course of tariff reform to be pursued under the leadership of Mr. Carlisle. His views upon the whole subject are temperate and judicious. They are more; they are the only ones possible in view of all the circumstances. The inevitable drift of things is in the direction of freer trade. The position of the United States must, for reasons which we have heretofore set forth, force it to adopt a liberal policy. The close relationships of the modern world, which improved facilities are every day rendering more close, are not compatible with the isolation, euphemistically termed industrial independence, which is regarded as so desirable by economists of a certain school. This being so, the problem of the practical statesman is so to frame his measures that the transition from the present to the future commercial policy of the country may be made with as little friction as possible. We need hardly repeat, what we have so often urged heretofore, that every consideration of justice and expediency demands that the change be made not at once, but gradually.

LOCAL GOVERNMENT AT PHILADELPHIA.

II.

After 1807 the loan market speedily came to be the primary resort of the Philadelphia officials in providing for the cost of city government. In the years immediately following 1800 scarcely more than 1½ per cent. of a given year's tax levy remained uncollected at the end of the year. This condition of affairs gradually relaxed as the facility with which money could be borrowed obtained a deeper hold and the collection of taxes began to lag. There was, in fact, no absolute need of collecting taxes promptly, as clothed with what amounted to a full power of attorney over the estates of taxpayers the city officials could both raise money by selling promises and renew obligations at will. As almost any one can run a business under unlimited credit, the wiser heads gradually came to withdraw from the direction of the city's finances, and men who had been more or less failures in managing private business as gradually took charge. The amount of taxes collected within the year of imposition grew less from year to year. Where before each individual's tax had been treated as a debt due from one person to the rest of the community, and prompt payment compelled, methods so loose had now obtained that taxes speedily began to lapse under the effect of stay laws in the interest of delinquents. In Philadelphia's first loan ordinance there was pledged "the whole of the income of the corporate estates of the citizens of Philadelphia and other adequate and sufficient provision within the means and power of the city corporation" for the payment of the debt thereby incurred. We have seen that in 1792 Philadelphia did an exclusively cash business. Within a year after the first loan ordinance of 1799 money was borrowed in anticipation of taxes previously levied, and in due course the corporate estates previously pledged were repeatedly pawned anew. Special taxes were "specifically pledged," and from 1805 down the mayor was at frequent intervals authorized to borrow in anticipation of taxes. By 1812 the councils began to borrow money "on the faith of the city," and in this year $125,000 were borrowed to be repaid "at the pleasure of councils." By 1816 loans were contracted for periods of thirty years. In 1818 the debt of the city footed up $632,000, the annual interest thereon being $38,158. In 1820 money was borrowed to redeem the loans contracted in 1799. In an ordinance of 1807 it was first laid down that certain expenditures were for "permanent improvements of or additions to the city property and not of ordinary or common expense, and which ought rather to be provided for by money borrowed than by a tax on the citizens." In due time loans were contracted avowedly "to supplement the tax levy." Matters went on with increasing looseness till about 1840, when the resorting to the loan market to meet current expenses came to be notoriously disgraceful. In the year named a deficiency in taxation for current expenses of the previous year having occurred a committee of councils reported that it "was both unwise and odious to continue the policy of deceiving their fellow citizens." Yet the history of the following years was but a repetition of the previous record. The events of these years bring clearly into relief the early demoralizing effect of the borrowing business in the conduct of city business in Philadelphia. All this time the city's sinking fund was working noiselessly and without friction. In due course the city had a board of sinking fund commissioners. In 1830 these commissioners solemnly submitted a report in which it was thought to be "not an unreasonable anticipation to hope that the period has almost arrived when the current receipts of the corporation should be sufficient for its expenditures without the aid of loans." Along with this hope was submitted a "calculation" showing that the city's funded debt of $1,974,000 would be paid off by the sinking fund on the 1st of January, 1875. It was declared that "the valuable importance of the sinking fund in providing the easiest method for the payment of the loans to the corporation * * * must be evident to every reflecting mind." Yet in this very year, 1830, $60,000 were borrowed to meet deficiencies in the current tax levy. And in the succeeding four years $295,000 were borrowed for like purposes. In the years from 1827 to 1839 a total of $947,000 was borrowed to eke out current tax levies. What more natural than that general political demoralization and corruption should have ensued. Things went on from bad to worse both as regards the city and county finances and those of the outlying districts. The fact should be noted here that before 1854, when the entire county was consolidated into one city, Philadelphia was situated much as London is now, a central corporation with outlying minor independent corporations. The pass to which the local finances were gradually brought in Philadelphia is well illustrated by the following statement from a presentment of the grand jury in the year 1853 (the year before consolidation) regarding the county's affairs:

"There must be something radically wrong in the present system of collecting taxes. A sufficient amount of money is annually assessed to meet the wants of the county, yet the treasury is seldom able to honor the demands upon it. It is a stigma upon the character of the county that its liabilities should be hawked about the street and sold at a discount. * * * We think if an office for the receipt of taxes was established and an allowance made to all who paid promptly and a corresponding addition to the amount not paid within a given period added, the county would be relieved of all financial difficulty."

Having drawn upon loans until the tax collections became notoriously bad, it was proposed to offer to taxpayers large discounts for paying debts for the support of government when due. This course was actually entered upon. In sharp contrast therewith let us call up the Philadelphia tax collection law of 1797. By the city ordinance of March 9 the portioned taxes became delinquent after three months, and it was laid down that in the event of delinquency at the end of three months distraint should take place forthwith. Tenants' goods were holding for taxes, the tenant to be repaid out of the first rent afterward accruing. In the absence of goods and chattels the body of the delinquent was to be taken, to be treated "in all respects as a debtor under execution." Collectors were responsible for the prompt enforcement of the taxes. Thus: If any of the taxes shall not be collected and paid to the treasury by said collectors within nine months each and every of the collectors and his or their respective securities shall be answerable for the sums in the respective duplicates mentioned unless the said collector shall make it appear to the satisfaction of the city commissioners "that the real estate taxed as aforesaid has been for all the time unoccupied, and the owner thereof out of the city and county of Philadelphia, or the persons charged with personal taxes were not to be found or were by poverty disabled to pay the same." It is thus seen that at the beginning of the century a tax was treated as the most sacred of debts, due from the individual to the rest of the community. In 1853 a premium was put on common honesty on the part of the taxpayer.

We have thus followed the course of Philadelphia's treasury down to the date of consolidation in 1854. Here ends what may be called the first period in the history of Philadelphia's treasury.

ART DUTY FREE.

From both commercial and artistic standpoints there can be only approval of the bill introduced into the House of Representatives by Mr. Belmont abolishing all duties on works of art. This is a very radical reform of the irrational tax that was levied at the last session of Congress upon art works, but it is a reform in the best sense of the word. As has been pointed out in this journal, the tax does no real service in the way of fostering home talent, for pictures are not like pig iron, and cannot be bulled by a high protective tariff. On the contrary, by throwing impediments in the way of the introduction of good pictures by foreign artists our home art suffers, the standard is kept at a lower level and the educating influence upon picture-buyers which every good picture exerts is lessened. Possibly the best arrangement that could be made to meet the requirements of the situation would be a specific duty of from $15 to $25 upon each picture imported. This would have no effect upon the importation of really good pictures, and would be a guard against the wholesale importation of the sweepings of the Munich and Dusseldorf studios, which cheap trash undoubtedly does militate against the sale of the work of our younger artists, whose "pot-boilers" are highly useful in helping them along the thorny way of art. But if a bill of this nature is not possible, then by all means let us have art work of all sorts duty free.

The wisdom of Mr. Belmont's second bill, that abolishes the duty on "classical antiquities," is not so apparent. In theory it is well enough; but there are sensible difficulties in the way of its practical application. It does not adequately define what a classical antiquity is, and a fine muddle is likely to be the result of leaving the determination of so nice a point to our custom-house appraisers. This bill opens the door to the free importation of pretty nearly everything in the shape of bric-a-brac that was, or that is said to have been, manufactured anywhere previous to the beginning of the sixteenth, possibly even the beginning of the seventeenth, century. As we have very flourishing manufactories of classical antiquities already established in this country, such an arrangement as is proposed in Mr. Belmont's bill bears hardly upon a considerable body of industrious Americans who, trusting to a beneficent protective tariff, have embarked their capital in the production of merchantable antiques. Seriously, though, the class of articles which may be included under Mr. Belmont's loose designation of "articles produced before or during the medieval period" is far too general to deserve the immunity that is to be accorded by his bill, and it is hard to see how any definition could be given of antiquities entitled to free entry that would be satisfactory. For the present the part of wisdom would be to reduce to a nominal figure, or to remove wholly, the duty on paintings and statuary, and to let the antiques, real and bogus, pay their way.

EXPORTS OF BREADSTUFFS AND PROVISIONS.

The recent report on the exports of breadstuffs and provisions issued by the National Bureau of Statistics, when considered in connection with the statement of shipments of breadstuffs abroad as reported by the New York Produce Exchange, affords an interesting study of the fluctuations in this department of our foreign trade. It is generally known that the exports of wheat from the crop of 1882–83 have thus far fallen very much short of the total reached in five and one-half months (following July 1) in 1882 or in 1881. The shipments of wheat as flour, however, while less than in five and one-half months of 1882, is in excess of the same during a like period of 1881. A memoranda compiled from the records of the New York Produce Exchange, referring to shipments from the seven Atlantic ports (including Montreal), classed by months, is as follows:

WHEAT AND FLOUR EXPORTS FROM ATLANTIC PORTS FROM JULY 1 TO DECEMBER 15.

	Wheat, bushels	*Flour, barrels.*
1881.		
July	6,592,927	453,609
August	10,336,686	501,441
September	10,044,828	605,700
October	4,140,841	347,427
November	5,388,871	559,831
December	1,324,930	144,555
Totals	37,833,103	2,612,563
1882.		
July	6,744,455	401,314
August	20,224,591	839,249
September	12,171,590	757,520
October	8,074,138	658,244
November	6,582,635	964,503
December	2,643,993	511,584
Totals	56,441,702	4,132,414
1883.		
July	3,092,089	423,389
August	8,223,924	661,662
September	5,148,190	619,273
October	3,414,763	693,380
November	3,794,751	771,060
December	1,882,779	414,723
Totals	25,556,486	3,583,887

The decline in exports of wheat from that raised east of the Rocky Mountains in 1881 and 1882 for five and one-half months has been 30,000,000 bushels this year as compared with 1882, and 12,276,617 bushels as compared with 1881. In the same period we have shipped abroad from the Atlantic ports 548,527 less barrels of flour than in 1882, and 971,324 more than in 1881. This appears to be a serious diminution in exports of breadstuffs, yet the record for eleven months of the calendar year from all ports, all breadstuffs being considered, is much more satisfactory. In November, while wheat still exhibited a decline in shipments as compared with November, 1882, those of flour had gained, and the total for export of all kinds of breadstuffs was actually in excess of that for the like month last year. The net decline in exports of wheat (and of flour reduced to equivalent bushels of wheat) for five months of the current crop year (to November 30) is:

	Exports 5 months. 1882, bushels.	1883, bushels.
Wheat and flour, Atlantic ports U. S.	71,901,859	43,475,921
Wheat and flour, Pacific ports U. S.	13,090,345	9,243,823
Total wheat and flour, all ports U. S.	84,992,204	52,719,744

The contrast to this shown by exports of Indian corn and Indian cornmeal from all ports during the same periods is striking:

	Exports 5 months 1882, bushels.	1883, bushels.
Indian corn, all ports	2,878,047	22,980,368
Indian corn meal, all ports	831,680	1,826,752
Totals	3,709,727	24,807,110

But when the government tables showing aggregate exports of breadstuffs are considered, our November shipments are found to exceed those of November, 1882, in quantity. The total for five months, of all breadstuffs, is less than 10,000,000 bushels under the record of 1882, while that for eleven months of 1883 actually exceeds a corresponding exhibit for 1882 by over 20,000,000 bushels. The following arrangement has been substituted for that in which the figures are printed at Washington:

NOVEMBER EXPORTS OF BREADSTUFFS.

	1883. No. bushels.	1883. Value.	1882. No. bushels.	1882. Value.
Wheat	6,764,837	$7,295,000	8,825,000	$9,334,000
*Flour	4,597,435	5,149,000	4,314,155	5,115,000
Indian Corn	2,815,041	1,695,000	934,789	525,000
†Indian Meal	90,940	70,000	72,684	71,000
Rye	573,545	395,000	249,175	182,000
Barley	65,515	39,000	62,031	46,000
Oats	27,521	12,000	25,870	14,000
Totals	14,734,834	$14,657,000	14,184,549	$15,290,000

EXPORTS BREADSTUFFS JULY 1 TO NOVEMBER 30.

	1883 No. bushels.	1883 Value.	1882. No. bushels.	1882. Value.
Wheat	34,892,804	$28,095,000	67,481,659	$76,026,000
*Flour	17,826,880	20,169,000	17,510,515	21,259,000
Indian Corn	22,980,358	13,744,000	2,878,047	2,290,000
†Indian Meal	456,888	364,000	407,920	411,000
Rye	2,894,759	1,955,000	643,718	488,000
Barley	220,984	137,000	245,016	174,000
Oats	313,192	123,000	149,292	83,000
Totals	79,585,725	$74,592,000	89,316,197	$100,734,000

EXPORTS ELEVEN MONTHS ENDING NOVEMBER 30.

	1883 No. bushels.	1883 Value.	1882. No. bushels.	1882. Value.
Wheat	64,234,526	$71,729,000	100,345,387	$114,441,000
*Flour	40,499,865	46,577,000	31,955,295	38,945,000
Indian corn	57,834,347	37,149,000	13,057,940	9,944,000
†Ind'n meal	1,011,352	835,000	855,008	819,000
Rye	4,265,278	3,013,000	1,264,851	1,070,000
Barley	387,078	246,000	291,034	213,000
Oats	423,219	187,000	266,482	155,000
Totals	168,655,665	$159,739,000	148,039,000	$165,591,000

* Barrels flour in equivalent bushels of wheat.
† Barrels Indian meal in equivalent bushels of corn.

A more comprehensive comparison of the movement of the leading cereals during eleven months of the present and three preceding years is given in the appended list of exports, in number of bushels:

	1880.	1881.	1882.	1883.
Wheat	133,870,955	109,814,650	100,345,387	64,234,526
*Flour	29,416,819	31,508,295	31,955,295	40,499,865
Total bush. wheat	163,287,765	141,322,945	132,300,682	104,734,391
Indian corn	109,654,675	70,271,479	13,057,940	57,834,347
†Meal	1,418,160	1,505,848	855,008	1,011,352
Total bush. corn	111,072,835	71,777,327	13,912,948	58,845,699

* Flour in equivalent bushels of wheat.
† Meal in equivalent bushels of corn.

These figures quite warrant the suggestion heretofore made that the consumptive power of this country for breadstuffs has increased far more in the past two or three years than has been estimated in recent and current calculations made to determine in advance the probable quantity of grain for export.

The exports of provisions and dairy products in November exceeded in value those in the like month of 1882 about $2,100,000, and those in 1881 by about $330,000. In a previous article it has been pointed out that the exports of this class of products are steadily increasing, and that at the current rate of shipment out of the country they are likely to soon exceed any preceding record. The gain in value of last November's shipments of hog products, beef and tallow, as against those in November, 1882, amounted to about $1,600,000 or 25 per cent., and in quantity nearly 33,000,000 pounds or over 60 per cent. The tables in detail are:

NOVEMBER'S EXPORTS OF PROVISIONS AND TALLOW.

	1883. Pounds.	1883. Value.	1882. Pounds.	1882. Value.
Bacon	34,954,816	$3,308,000	13,713,223	$1,668,000
Pork	5,665,063	354,000	5,780,713	614,000
Lard	23,800,810	2,004,000	20,901,564	2,605,000
Hams	3,513,681	499,000	1,817,635	245,000
Beef, fresh	11,512,515	1,139,000	6,374,569	645,000
Beef, cured	3,559,534	266,000	3,486,494	305,000
Tallow	5,684,999	386,000	2,466,640	204,000
Totals	87,491,427	$7,871,000	54,540,178	$6,289,000

EXPORTS PROVISIONS AND TALLOW ELEVEN MONTHS TO NOV. 30.

	1883. Pounds.	1883. Value.	1882. Pounds.	1882. Value.
Bacon	324,511,254	$33,725,000	265,356,102	$28,314,000
Pork	61,641,918	5,279,000	56,867,347	5,450,000
Lard	247,202,600	25,552,000	206,655,050	24,584,000
Hams	47,893,737	5,865,000	26,031,490	3,291,000
Beef, fresh	104,586,495	10,648,000	44,504,523	4,437,000
Beef, cured	39,737,289	3,245,000	36,704,694	3,307,000
Tallow	52,070,214	4,140,000	36,559,133	3,692,000
Totals	877,643,507	$88,454,000	682,068,309	$72,475,000

EXPORTS OF BUTTER AND CHEESE.

For November:	1883. Pounds.	1883. Value.	1882. Pounds.	1882. Value.
Butter	2,016,321	$410,000	650,234	$121,000
Cheese	5,754,094	651,000	3,955,687	412,000
Totals	7,770,415	$1,061,000	4,605,921	$533,000
For seven months ending November 30:				
Butter	15,547,687	$2,819,000	5,044,124	$974,000
Cheese	94,463,163	9,920,000	80,177,921	8,850,000
Totals	110,010,850	$12,739,000	85,222,045	$9,825,000
For eleven months ending November 30:				
Butter	20,923,666	$3,808,000	6,971,667	$1,380,000
Cheese	104,919,873	11,117,000	99,514,264	$11,003,000
Totals	125,843,539	$14,925,000	106,485,931	$12,383,000

For eleven months in 1883 the value of exports of hog products, beef (salt and cured) and of tallow, exceeded that of shipments in November, 1882, by about $16,000,000, or 22 per cent. In quantity the excess in the past eleven months was nearly 95,600,000 pounds, or about 14 per cent. The gain in value in the November, 1883, shipments of butter and cheese as against those in that month last year was about 100 per cent., and in quantity about 65 per cent. only. For seven months the gain was in value about 33 per cent., and in quantity about 29½ per cent. For eleven months the excess shipments of butter and cheese as against 1882 were in value nearly $2,600,000 or about 20 per cent., and in quantity over 19,300,000 pounds, or about 18 per cent.

MUTUAL AID ASSOCIATIONS IN GERMANY.

Considering the absorbing attention that is now paid to the politico-economical question—whether anomalies and evils which appear in the political economy of a state ought to be mended entirely by the officials and by government money, or rather by inciting and increasing the self-helpfulness of individuals or private companies—it is certainly interesting and instructive to learn last year's results of such German mutual aid associations and supply stores as are founded upon self-help. About the same time when Ferdinand Lassale converted by his sharp dialectics and brilliant eloquence thousands and thousands in Germany to socialism—namely, to believing in the improvement of the condition of the laborer exclusively by the help of government—it was at this time that Schulze-Delitzsch, the no less eloquent and gifted friend of the people, the experienced politician and public economist, founded the German mutual aid associations and supply stores. However far socialism has spread in Germany, the idea of the state possibly protecting every subject from the cares and privations of life would have won acceptance in still larger circles if these associations had not proved, during the twenty-four years of their existence, how much can be done by self-help when people of similar interests unite under reasonable and well-founded conditions. The same individual, who alone being without capital is powerless, becomes comparatively, by association with others in a like condition, financially and economically powerful.

Starting from this principle, Schulze-Delitzsch, in 1859, created four different sorts of associations: 1st, credit associations; 2d, trades unions; 3d, supply stores; 4th, building associations, all of which he supported by good advice and active assistance until his death, on the 29th of April, this year, which was lamented far beyond the confines of Germany. This man, indefatigable in his work, had, when he died, the satisfaction of having on his list 3,485—in reality there are sure to be 3,550—such associations in Germany, the members of which are estimated with certainty at from 1,100,000 to 1,200,000. The business done in these associations, as far as credit granted and the selling of wares are concerned, is quoted as having amounted, in 1882, to more than 2,000,000,000 marks ($500,000,000); the capital sunk in these enterprises is calculated at 620,000,000 marks ($155,000,000), 200,000,000 marks ($50,000,000) of which are their own capital, consisting in shares and reserves, whereas 420,000,000 marks ($105,000,000) are extraneous capital.

Among these 3,485 unions there are 1,875 advance or credit associations, also called people's or tradesmen's banks. The principles are as follows:

Firstly. Those desiring an advance themselves support and direct the institution which is to give them credit, that means, they must be members of the association and therefore share all the risks and profits of the business.

Secondly. The money traffic managed by the association is based on an entirely business footing (reciprocity), so that the creditors of the association get from the union, as well as the latter from the debtors, interest and provision, according to the state of the money market, and likewise directors, especially those in the cash department, receive fair salaries for their work.

Thirdly. By immediate full payment, or in most cases by continual small contributions of the members, shares (credit) are formed by the company according to the rate at which the profits are divided and added to them, till they reach the amount fixed as normal, so that a continually increasing capital of their own is formed for the transactions of the union, just as by issuing shares.

Fourthly. By the entrance fees of the members and from the profits a fund belonging to the association is to be collected, serving as a reserve, principally to meet great losses.

Fifthly. All extraneous funds necessary for the business are borrowed on common credit and are guaranteed to the full amount by each member.

Sixthly. The number of members is unlimited; everyone fulfilling the general conditions of the statutes may join the association, or leave it after having given notice at stated times.

In the report of 1882 the results of 905 credit banks are published. A comparison of the results of 1882 with the same of the year before shows as follows:

	1882.	1881.
Number of unions mentioned	905	902
Number of members	461,153	462,212
Total amount advances made, marks.	1,502,367,435	1,472,004,974
Average advances per association, marks	1,660,074	1,631,934
Funds of the unions:		
Shares, marks	103,286,404	102,374,010
Reserve funds, marks	18,182,515	17,396,157
Total amount of the associations' funds, marks	121,468,919	119,770,167
Average amount per association, marks	134,219	132,780
Money borrowed on credit:		
Loans from private individ'ls, marks.	240,112,136	240,313,951
Credit, banking houses, etc., marks.	10,663,765	10,838,145
Sums deposited as savings, marks.	128,603,391	12346,318
Total am't extraneous funds, marks.	379,379,292	374,298,414
Average am't per association, marks.	419,203	414,964

The average number of members in every institution is 509, to 512 in 1881. In comparison with the preceding year the total amount of credit granted shows an increase not only for the whole sum or the average sum per association, but also for the average sum per member. The amount for each member was 3,262 marks ($815) in comparison with 3,184 marks ($796) in 1881. The working capital at the end of 1832 amounted to 500,848,211 marks ($125,212,052), about 6,500,000 marks more than 1881. Their own capital in 1882 was 261 marks ($65) per member; the borrowed capital 822 marks ($205) per member. From their own capital each member possessed in shares an average amount of 224 marks ($56). Their own capital in 1882 was 32.01 per cent. of the extraneous capital. The gross profits were 6.29 per cent. of the working capital at the close of 1882, the interest paid to the creditors 4.22 per cent. In 1882, 97,551 marks ($14,387) were expended in instruction and other general useful purposes, instead of 33,372 marks ($8,393) in 1881. No bankruptcy of any of the associations has happened in 1882, but eight of them have, in consequence of rather considerable losses, resolved to liquidate.

Upon the same principles as the credit associations, the guarantee of every single member for the whole debts of the institution, formation of a fund of their own, etc., unions in different trades have been formed, reckoned at 954 by the report of 1882. They are divided into (*a*) societies for buying raw materials, (*b*) working societies, (*c*) store societies, (*d*) productive societies. The object of the raw materials societies is to buy in wholesale and in common for the members (who are all supposed to conduct their business independently and at their own expense) the raw materials they require for their trade. Tradesmen without means, who would otherwise be incapable of enjoying the advantages of wholesale purchases, therefore, by forming an association, or by joining an already existing one, can buy the raw materials at a cheaper rate, often saving 10 to 20 per cent. Small farmers, when members of an association, can buy artificial manure and other articles indispensable for farming, such as food for cattle, etc., at cheap rates, and have the article examined by analytical chemists. The purpose of working societies is to buy for general use machines and animals for breeding. The object of the stores is to establish a shop in common where every member has a right or is obliged to exhibit for sale articles made in his business, and where orders for articles not in the store are accepted. In many cases the store companies have made such arrangements with the credit banks that the latter lend money on the wares exhibited to their owners, thus giving them the means necessary to continue their work until their wares are sold. The productive societies are associations of a certain number of workmen in the same trade for the united practice of it. According to the report, not only joiners, spinners, bakers, printers, tailors, cigarmakers and many other trades have united in productive associations, but also for the purpose of farming and cultivation of wood and timber a number of such associations have been formed. The report mentions 131 dairy and cheese societies, 16 wine-growing societies, 4 breeding societies, 2 hop-growing societies and 1 wood and timber growing society. To these must be added 13 insurance societies, 35 building societies, and 28 other societies of different kinds. In conclusion, the report mentions the development and activity of the supply societies, whose object is to supply unadulterated and good wares for the use of the members and their families, and, like the above-mentioned associations, to make every member answerable for the capital borrowed for buying the stores, and to endeavor to form a fund of their own. The number of the supply societies of last year was 621, but the results of only 182 of them, with 130,089 members, are published. The 182 stores sold in 1882 for 33,603,799 marks ($8,400,949). In charging for retail sales of the goods a trifle more than the price they were purchased at the 182 stores at the end of 1882 had a clear profit of 4,670,002 marks ($1,167,500), of which 1,323,434 marks were taken to form a reserve fund, the remainder, 3,552,568 marks, was set aside for the members.

In a general meeting, which took place lately, and where delegates from the different associations were present, arrangements were made that the associations, after the death of their founder, Schulze-Delitzsch, should continue their activity as hitherto, and, let us hope, with the same beneficial effect.

ART INDUSTRIES AND FOREIGN TRADE OF FRANCE.

The important advance which France has made in her commercial and industrial resources in the last quarter of a century betokens at once the energy of her people and the enlightened character of the policy by which her material interests have been built up. In her foreign trade she has been notably befriended by the consummate genius evinced in design and skill in workmanship. Prominent among her famous industries are textile fabrics, decorated ceramic ware, innumerable fantasies in art objects, and the constructive arts in general. Many of these products, characteristically French in their style of rendering, are allowed to be all but inimitable. Exhaustless inventiveness in embodying novelty, beauty or other form of excellence, combined with the power of eliminating new styles of fashion from such as reign so as to avoid too abrupt transitions, and rendering these so acceptable as to enable her to take the lead of the world in matters of taste, have secured for her manufactures large and profitable markets. Fashion is itself an element of value in trade, and the ability to be the first to place those that will secure the public preference has been of untold advantage to her manufacturers. Textile goods, which constitute a large proportion of French exports to European markets and this country, are conspicuous, as all are aware, for their high finish, exquisite tones of color and effective harmonies and pleasing contrasts in hues of patterns. That with the progress that is being achieved by other nations in art industries, the ratio of increase in her foreign trade is liable to be reduced is a foregone conclusion. Our own rapidly developing silk manufactures may be instanced as affecting one most important branch of her textile productions; so also the improvements here carried out in soft mixed goods. Abroad, the competition of England and Germany is being especially felt by French manufacturers. England, owing to improvements assiduously introduced into her machinery and the rapid progress she has made in art industry since 1851, has been enabled more completely than heretofore to meet the demand for tasteful goods, and this with increasingly rapid production, while German designers and artisans have shown of late years a previously unsuspected ability to turn out art products scarcely distinguishable from those of France. This foreign competition has been materially aided by the change that has come over the methods and course of trade from the general dispo-

sition of jobbers to buy only for immediate requirements, thus distributing their purchases in each season over a longer period, so affording opportunity to English, German and Belgian manufactures to produce in good time rival designs or imitations with such modifications as may be suggested. The French manufacturers on their part endeavor to meet this by changing styles more rapidly, but the taste of buyers, less amenable to the decrees of Paris, fails to respond with its former promptitude. The effect on French trade is more apparent at this time, when, from general influences in operation, all trade is more or less depressed. The circumstance of the falling off in the export of French manufactures the present year as compared with 1882, although the deficit is represented by only a few million francs, has, together with the unfavorable position of the cotton and woolen industries of France, had the effect of exciting attention to the causes operating in France itself to check the development of her trade.

The situation has elicited both from her manufacturers and certain other political economists very decisive opinions. The former particularly point to the heavy transit charges of the leading railway companies, the more severely felt as most of the great centers of industry lie inland. The companies are held by their contracts with the State not to exceed certain maximum rates for specified classes of goods, but the complaint is that they never fail to enforce these maximum rates. For their persistence there is apparently no corrective. The economists on their part affirm that manufacturers have exhibited a want of enterprise in not keeping pace with improvements in machinery, but for any deficiency on this score the long political agitations of the country are surely in part chargeable. The heavy cost of change of plant can only be readily incurred with the assurance of continued commercial stability in the future. The allegation of the manufacturers that the heavy debt incurred by the last war has made everything dear would seem more to the point in considering the influences operating on cost of production. The economists go so far as to affirm that there is a positive decline in French art industries, an averment that cannot surely be put forth in the sense of any lack of ability on the part of French designers to hold their own so far as skill is concerned, though possibly taking into account the mercantile necessity of producing medium and cheaper goods, with some falling off in the demand of the production of costly and elaborate articles of luxury. As to the future, the want of an effective system of apprenticeship is complained of, such as would train up skilled workmen; but as to this point England, whose trade guilds long since lost their domination, is in the same position, while in Germany the bonds of union in the different crafts, making regulations that secured the efficiency of workmen, are being sensibly weakened. To establish the position of a least a prospective decline, it is alleged that in the trade and art schools there is an absence of a proper system of education, the methods adopted leading pupils to acquire a distaste for mechanical pursuits. If this be so, the remedy is sufficiently apparent. The truth is, that between all industrial nations, as time goes on, competition will become more tntensified, and changed conditions must be met, not merely by new economies introduced into manufactures, but by the exercise of increased mercantile sagacity.

OCCASIONAL NOTES.

In a recently published pamphlet on bankruptcy legislation, Mr. D. C. Robbins, of the New York Chamber of Commerce, advocates the punishment of bankrupts whenever it appears that they have been engaged in illegitimate "outside" speculation. He says:

> A firm engaged in a legitimate commercial business, which goes out of it and speculates in other business and fails, ought to suffer a public penalty. Thus, if a hardware firm gambles in mines, a dry goods firm dabbles in real estate, a drug merchant embarks or speculates in produce or stocks, the money lost is not their own, but funds advanced by bankers and others on their notes, under the belief that they are doing a legitimate business. When they fail, the injury is not confined to the creditors; public confidence is shaken, support is withdrawn from other good firms, and workmen are thrown out of employment. Thus the ripple of one man's evil act extends till it reaches from the banker to the mechanic.

This is sound doctrine. As we have repeatedly pointed out, the criminal law, as at present administered, is far behind the needs of the day. It should be extended to cover just such cases as mentioned by Mr. Robbins. The provisions for the punishment of the acts referred to should be included in a general bankruptcy law, for the reason that it is only under the machinery created by such a law that an energetic enforcement of such provisions can be hoped for.

A meeting of the Manitoba and Northwest Farmers' Union was held at Winnipeg on the 19th inst., at which resolutions were offered which advocated taking measures to force the federal government to recognize the rights of Manitoba, and urged the withdrawal of the province from the confederation in the event of failure to secure the rights demanded. The duties on agricultural implements, building materials and necessary articles of food and clothing were uanimously condemned. The situation in Manitoba is decidedly interesting. It furnishes another illustration of the difficulty of attempting, by so crude a means as a tax, to determine the general course of industry over a wide extent of country. The London *Economist* prints a letter from a Canadian on the operation of the Canadian tariff which contains some points of interest in this connection. The writer says that up to the present moment it has been difficult to get the question fairly discussed, for the reason that almost simultaneously with the introduction of the protective tariff in 1879 the condition of business in Canada began to revive through the operation of causes unconnected with the tariff, such as the revival of trade with the United States and the reduction in the rate of interest paid by farmers in Canada on account of the abundance and cheapnesss of money in England and the United States. He shows, by reference to tables printed with his letter, that the imports, and consequently the amount of customs duties, on which the revenue of Canada largely depends are regulated very much more by the good or bad harvests and by the good or bad demand for timber and for farm products of all sorts than by the fiscal policy of the moment. He does not, however, attempt to decide the question how far Canadian prosperity is due to the protective tariff, thinking that a decision upon that question should be postponed. Meantime, he says, the Canadian manufacturers are finding that their market is glutted, and are threatening to reduce their production. The number of bankruptcies has been increasing after several years of prosperity, and there is a great tension and feeling of uneasiness in banking and commercial circles and a very serious reduction in the prices of Canadian bank stocks and securities.

One of the distinguishing characteristics of modern times is the extent to which science has been applied to the every-day needs of men. The alliance between science and the arts or trade has in late years become very close, and is destined to become still closer. The late Dr. Siemens was so struck with this development that he declared that theory and practice have been rendered so interdependent that an ultimate union between them is a matter of absolute necessity for future progress. It is not only in the more ambitious departments that this connection between science and industry has become so notable a fact. The very humblest branches have felt and are continuing to feel in an increasing degree the influence of scientific research on industrial methods. Among the most powerful instruments of science in extending its domain the microscope has long been conspicuous, and one of the most interesting applications of this instrument has been found in the textile industries. This particular application of the microscope appears to be of growing interest to a considerable number of persons, for we notice that a society known as the Textile Microscopic Association, apparently having a membership outside of the city of New York, is to give an exhibition of textiles and microscopes in that city. The circumstance is perhaps as good an illustration as has come to our notice of the minuteness, as well as the closeness, of the relations of science and industry.

Elsewhere in these columns will be found an account of the conference just held in Sydney to consider the question of the annexation of New Guinea. The movement may turn out to have more significance than some influential persons in England have been inclined to attribute to it. This fact is recognized by the *Pall Mall Gazette*, which says that the representatives present at the Sydney conference have proclaimed a policy analogous to the Monroe doctrine concerning the whole of the Pacific south of the equator. They declare in effect that the safety and well-being of the Australasian colonies demand the prohibition of the further acquisition of dominion in the Pacific south of the equator by any foreign power. Such a declaration, says the *Gazette*, "is not to be lightly treated, as if it were the idle vaporing of excited pamphleteers. These men are in earnest. They are the responsible representatives of states destined in the near future to cast the kingdoms of the older world into the shade, and to rival the mighty growth of the American republic. Nor do they merely content themselves with making demands upon the Imperial government. That which distinguishes the present from the resolutions of all previous conventions is that the governments represented undertake to pay their share of the cost of a proposed policy. That means business. For the first time the colonists seem to be in earnest, and to back their opinions with their money. If the mood is permanent, it needs no prophetic gift to see that they will before long have their own way. The home government may protest and remonstrate. But if the Australasians are quite certain that a given policy is necessary to their safety and well-being, they are certain to secure its adoption if they are willing to pay for it. Our hand will always be forced by our fellow-citizens on the spot."

It is now nine years since, in one of the most remarkable addresses ever delivered before a scientific society, the then president of the British Association for the Advancement of Science (Mr. Tyndall) drew attention to the wealth of literary culture at the command of some of the chief modern exponents of science. Among scientists distinguished for skill in letters the speaker particularized the present president of the Royal Society, Mr. Huxley. How well deserved was this encomium all who are familiar with Mr. Huxley's published writings know. The following tribute to his lately deceased predecessor as president, Mr. Spottiswoode, shows that he has lost nothing of his old-time skill and felicity. He said: "On the 27th of June our honored and loved president, William Spottiswoode, fell a victim to that cruel malady typhoid fever, which is at once the scourge and the reproach of modern civilization, and we were bereaved of a chief of whom all those who had the highest interests of this society at heart hoped that he would continue for many a year to discharge the responsible and laborious duties of his office with that broad intelligence, that faithful diligence, that inexhaustible patience and courtesy which were so characteristic of the man. Every one of the fellows of the society in whose hearing I speak knows that these are no words of conventional eulogy, as of a customary epitaph, but it is only those of us who worked with our late president in the council, or as officers of the society, who are in a position fully to appreciate his singular capacity for the transaction of business with clear judgment and rapid decision, and yet with the most conscientious consideration of the views of those with whom he was associated. And, I may add, that it is only those who enjoyed Mr. Spottiswoode's intimate friendship, as it was my privilege to do for some quarter of a century, who can know how much was lost when there vanished from among us that rare personality, so commingled of delicate sensitiveness with marvelous self-control, of rigid principle with genial tolerance, of energetic practical activity with untiring benevolence."

The figures of the Massachusetts Secretary of State show an increase in the total valuation of the real and personal property in the state of $47,083,638, as compared with last year. Twenty cities and 215 towns report an increase. One city and 110 towns a decrease. Of the above total increase $36,586,927 is credited to real estate, and $10,496,711 to personal estate. An increase of $232,518 in the total tax is reported. The state tax, however, is $500,000 less than last year. "Money at interest" shows a decrease of $923,557 in the "amount secured by mortgage," and an increase of $2,963,719 in the "amount unsecured." "Money on hand" shows a decrease of $1,801,773. An increase of $3,684,538 is reported in the amount of "stocks in corporations."

In the *North American Review* for January the opposite sides of the question of "Ecclesiastical Control in Utah" are set forth by two representative men, President John Taylor, the official head of the Mormon Church, and the Hon. Eli H. Murray, governor of the territory of Utah. Senator John I. Mitchell writes of the "Tribulations of the American Dollar," recounting the strenuous efforts of the people of the United States to extinguish the national debt, and contending that it is our imperative duty to-day to settle definitely the question whether we shall have dollars of unequal commercial value in circulation. Senator Henry W. Blair, taking for his theme "Alcohol in Politics," declares his belief that another irrepressible conflict is at hand, and advocates the submission to the people of an amendment to the United States Constitution prohibiting the manufacture, sale and importation of intoxicating liquors. "Evils Incident to Immigration," by Edward Self, is a forcible statement of the mischiefs wrought by the importation into our social and political life of an enormous annual contingent from the lowest stratum of the population of Europe. The subject of "Bribery by Railway Passes" is discussed by Charles Aldrich and Judge N. M. Hubbard.

SPECIAL CORRESPONDENCE.

BUSINESS LEGISLATION IN CONGRESS.

Washington, December 19.—The forty-eighth Congress has commenced active work and the bills upon its calendars already exceed two thousand. One may well ask, if this is the result in the green tree what will it be in the dry? A very small percentage of these bills will ever be removed from the pigeon-holes of the committees—except to be sent to the junk dealers. They embrace every subject within the scope of government supervision, and many which contemplate the exercise of a very "paternal" authority on the part of the general government. It will be possible to refer only to those which in a general way relate to the business interests of the country.

All the bills which relate to finance are based upon the assumption that there is serious danger of contraction of national bank currency if the present system of redemption of the 3 per cents shall continue. The bills propose in various ways to avert this danger. Possibly the most practical measures are those which contemplate the issue of banknote circulation on the basis of 10 per cent. less than the market value and the abolition of the tax on circulation. It is the opinion of those best qualified to judge that the enactment of laws which embody these propositions would enable the banks to continue their circulation on the basis of the existing securities. There is very little prospect that any long-time low-rate bond will be authorized.

Manifold measures have been proposed as to the tariff. There is no doubt that there will be considerable discussion of the tariff question, but there is no probability that there will be any general legislation on this subject. The subjects as to which special tariff legislation is desired are salt, lumber, wool, art and sugar. There is a prospect that the restrictive provisions as to American art, which were inadvertently incorporated in the tariff revision of last year, will be corrected, so that American artists in Europe will not have their present very just cause for complaint. The proposition as to the wool tariff is one in which the representatives of both parties from the wool-growing states are interested. They wish to have the tariff on this article restored to the old rates, and they claim that, with the undervaluations, it is impossible to compete with the foreign wool growers. The manufacturers, on the other hand, would be quite willing that the duties on these wools—which are their raw material—should be even lower. But they do not venture to take any action in that direction, as it would be impossible for them to sustain the present general tariff system without the aid of the wool growers, whose only protection is on wool. The movement on behalf of wool, therefore, is one which may give those who are interested in the tariff on manufactured goods very considerable embarrassment. There is a serious movement in favor of abolishing the duty on sugar, and giving a bounty for a certain number of years to producers of American sugars. It is a proposition which has much support in the east, and which, with the provision as to drawback, would not be so vigorously opposed in the sugar-growing states. Such a proposition, if accepted, would remove the subject of surplus revenue from the field of active discussion. The national Treasury cannot spare any more revenue than it derives from the duty on sugar, and it may be doubted whether it can spare so much.

There would no longer be any question of surplus revenue if the pension bills which have been introduced should become laws. A rough estimate of the amount required for those which have already been submitted is $40,000,000, most of which would be for many years an annual burden upon the Treasury.

The subject of the restoration of American shipping has been submitted to both houses in various forms. Those who object to any modification of the tariff laws or of the registry laws are numbered among those who are the most earnest in attempting to improve the lamentable condition of the merchant marine. Representative Dingley, of Maine, whose district probably includes a larger ship-building territory than that of any other congressman, has devoted himself assiduously to the subject of the restoration of commerce for some years, and has presented a series of bills which, he thinks, are designed to accomplish this object. They do not interfere with the tariff or registration laws, but provide for the removal of very many serious bur-

dens imposed upon our commerce by the navigation laws. Should Mr. Dingley's bills be enacted very important advantages would be secured for our commercial marine. The truth is some of the restrictions upon our commerce seem to have come down from the dark ages. They do not benefit the government in any degree, but are a constant restriction upon commercial activity. More radical measures are proposed by several Congressmen, including bills to admit all raw material for ships free of duty and to change the registry laws so that Americans may own foreign-built ships. Recent disclosures before the Alabama Claims Court have shown to what subterfuges American capitalists do resort to evade these registry laws. It appears that a very large percentage of the merchant ships which during the rebellion sailed under the British flag was in point of fact owned almost entirely by Americans, the British ownership being but a very flimsy pretext.

There have been a number of bills introduced for the establishment of bureaus or departments of commerce and industry, which illustrate the fact that there is no adequate provision in the existing machinery of the government for the needs of commerce. The Treasury Department is the department of business men, but it is exceedingly unwieldy and top-heavy, and very much too extensive and complicated for any one man to control, however skilled an executive officer. It happens that the department is frequently under the control of a mere politician, not informed as to business methods or commercial necessities, while sometimes, as at present, the head of it is a judge who has little practical knowledge of business affairs, and absolutely no executive capacity. The consequence is that the suggestion that the affairs of the government are conducted as those of a business house are is now a most ridiculous absurdity. No business house could sustain itself for a month if its affairs were conducted as the matters affecting business interests in many branches of the treasury are. It is a fact that important business questions have been upon the desk of the Secretary of the Treasury almost from the moment that he entered upon the duties of his office and are yet undisposed of. They have been considered many times only to be laid down again. The department is too big. It embraces too many subjects, and, whether the proposition to create a bureau of commerce is a proper one or not, it is very certain that the business interests of the country will continue to suffer until some better system of administration of commercial matters shall be devised. This is the more important because the government, so far from becoming less centralized in its tendencies, each year seems to place its hands more upon the complex machinery of trade and commerce.

There is better promise of some substantial legislation on the subject of inter-state commerce than there for years has been. Many of the representatives were elected on the issue of a better regulation of commerce, and it is expected that Reagan, of Texas, one of most enthusiastic advocates of government control of transportation, will be made Chairman of the House Commerce Committee. Various measures have already been introduced upon this subject, and the supporters of these schemes are very hopeful that some adequate measure for the control of railway freights and fares will be devised.

Bills of almost infinite variety relating to postal telegraphy have been introduced. Representative Sumner, of California, who has devoted much time to the consideration of this subject, is of opinion that the government could conduct a postal telegraph system profitably on the basis of a five-cent rate for ten words. Practical telegraphers do not dispute this theory. Mr. Edmunds has redeemed his promise to propose a government telegraph, which he has by a bill authorizing the creation of four trunk lines from Washington. His bill furnishes a curious illustration of the view entertained by many politicians that Washington is the center of business as well as of political affairs. The interests of the commercial world would certainly not be best subserved by having the telegraph center located at Washington, where there is no commerce and where there is no business, except the retail trade necessary to supply the army of officeholders. Senator Hill, of Colorado, as chairman of the Committee on Post Offices, to which the subject will be referred, has one of the few bills which contemplate the purchase of the existing lines. It is safe to say, however, that no bill will be passed which contains such provisions. The postal telegraph project has not received the encouragement which was expected from the administration. On the contrary, the views of the President and of the Postmaster-General in opposition to it have much discouraged the originators of it. President Arthur has never been in favor of a postal telegraph. It is believed that Postmaster-General Gresham was, but that he was overruled by the President, who desired that the views of the administration should be a unit upon this subject. In view of the diversity of opinion in administration circles, and of the very determined and aggressive opposition of the Western Union to any of the plans which are likely to receive the most support, it is very clear that the forty-eighth Congress will enact no postal telegraph law.

There is better prospect in the Senate for a bankruptcy bill than there was in the last Congress. The advocates of the Lowell plan have made some minor modifications which render their measure more acceptable, or at least less objectionable to the west, and Senator Ingalls, one of the leaders of the successful opposition to any bankruptcy bill last year, is reported as being more favorably disposed to the modified bill. But there has not been an opportunity for a careful canvass of the views of the House, and so large a percentage of the Representatives from the west and south is known to be opposed to any bankruptcy legislation that the friends of that measure are not very enthusiastic as to its success.

The reports of special agents of the government made during the last summer show that for many years there have existed organizations among capitalists to obtain control of vast tracts of timber and agricultural land. The reports state that the public domain is fast disappearing under this system. A number of bills have been introduced to check this practice, notable among them being propositions to repeal what are known as the timber and preëmption laws. It is very evident that the days when speculators by combinations can secure the best of the government lands have passed. Meanwhile the extent of the national domain itself has been rapidly restricted.

THE BARBED-WIRE CONTROVERSY.

Chicago, November 4.—The contest now in progress between the Washburn & Moen Manufacturing Company of Worcester, Mass., and a large proportion of the makers of barbed wire for fencing purposes in this country is one of the best illustrations of the subtleties of patent law, of the uncertainties of operations under it, and of the persistency with which legal fights are carried on. The chief popular interest in the litigation is in the west, the courts in only four states—Illinois, Iowa, Missouri and Kansas—having been much concerned with the matter. But when it is considered that something like 300 patents have been granted on devices for arming wire fences with barbs it will be seen that the opportunity for lawsuits is practically unlimited. Of these patents the Washburn & Moen company own thirty or more. There are millions of dollars invested in the manufacture of these goods, and it is the opinion even of their opponents that the company's position is a strong one, not merely in law but in the vantage ground that their enterprise has given them in the markets. It is believed, however, that after the cases now pending in the courts are disposed of it will be found that their chief strength is in the patents they have secured on the machinery with which they make the goods. Rulings have recently been made by Circuit Judges McCrary and Treat in Iowa and the eastern district of Missouri that bring again in question the very essentials of the patents. They have refused to grant preliminary injunctions against manufacturers charged with infringements of the patents, some of which they have declared void, but as regards other patents have admitted these manufacturers to bonds for appearance at another hearing, when the question of a permanent injunction will come up. The litigation has thus far been entirely in the lower courts, no appeal having been taken to the supreme bench. An appeal, however, is only a question of time unless efforts now in progress to effect a general compromise are successful.

The idea is as old as the thornbush, the picket or any device to make the climbing or forcing of a fence difficult. The patent was granted and has been judicially sustained on the ground of its special application and its great utility. The original decisions both of the patent office and the courts gave Washburn & Moen exclusive ownership of the main idea of a fence of this sort, but the more recent ones clearly dismiss that theory, as some forms of the barbed wire have been considered not infringements. The fight now is over the various forms of applying the barb to the wire. Judges Drummond and Blodgett of Illinois are the ones whose decisions have given the patentees the strongest support. Cases were brought before them for the first time some three years ago and they fully sustained the claims of the patentees. A rehearing was, however, granted a month or two later, as the result of which the patents were somewhat limited. Judge Drummond, in his opinion delivered after the rehearing, said that it had been so common to arm fences with such obstructions that "it was not competent for any inventor to do more than to claim his own special method of forming and of fixing the barb which he had devised. The most important patents now in litigation are those of Michael Kelly and Joseph Glidden, both of which are reissues; that is to say, they are based on new letters granted on the ground that the original application did not contain all that might properly be claimed by the inventor. The Supreme Court has recently laid down the rules that a reissue to enlarge the claims must be applied for immediately; that it must be applied for before the rights of others have intervened; that the right to reissue is not determined by the right to originally claim, and that the reissue is invalid unless the original patent could have covered the infringing device. Banning & Banning, of Chicago, who defended the Watkins Barb Fence Company from the charge of infringement, showed that in the case of Kelly it was more than seven years after the original patent was granted that the reissue was applied for, and in the case of Glidden some twenty months. It is charged that the object of Kelly and Glidden in securing reissues was to unwarrantedly enlarge their claims. These points were considered so well taken that the court refused to grant any injunction, and accepted from the manufacturers a small bond pending a final hearing. The Watkins sheet-metal wire is accordingly now made without molestation from Washburn & Moen.

The contests in court have illustrated how minutely the various patents have been differentiated. Almost everybody who has thought of a new way of attaching a sharp point to a wire seems to have got a patent on it, and Washburn & Moen have laid hands on most of the useful ones. It is one of the claims of the opposition that after the first few methods there was nothing patentable. It is a weakness of the alleged infringers that they are at cross purposes with each other, but the more recent events are in their favor. The decision of Judge Treat enables the Missouri manufacturers to make the wire to any extent and send it to any part of the country, but of course they have constantly hanging over them the possibility of an adverse decision and an accounting that will ruin them. The Iowa case comes up at Des Moines next month, and there will then be a hearing on a new patent of Glidden's.

The licensees have once tried to maintain a combination having a special contract with the company under which no favoritism should be shown, but the usual quarrel incident to such organizations arose and the combination fell to pieces. Another is projected which shall practically unite all the licensees in one corporation and make it impossible for the outsiders to successfully fight them. The shrewdness already displayed by Washburn & Moen would be a guarantee of a strong management, and the enormous amount of capital represented would bear with crushing weight on the small fry. Apart from questions as to the barbed-wire patents, Washburn & Moen, by their great wealth, their prestige in the market and their patents on machinery, would seem to have a tolerably secure position. They are also said to have a foreign trade the extent and profitableness of which they are at no pains to advertise to persons who would be likely to become their competitors, and in which the licensees do not engage.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.]

The United States may maintain a suit in equity to vacate letters patent upon the ground of fraud of the patentee in obtaining the letters, according to the decision of the United States Circuit Court for the Southern District of New York in the recently decided case of The United States vs. Gunning.

The measure of a land owner's compensation for land taken for railroad purposes is the value of the land at the time it is taken, and any supposed future increase of value by reason of the building of the proposed road should not be taken into account, according to the opinion of the Minnesota Supreme Court in the case of Brunswick vs. Union Depot Street Railway Company of Stillwater, decided on the 11th inst.

The recording of a voluntary conveyance is not constructive notice to antecedent creditors of the grantor, and the statute of limitations does not begin to run against an action by them to set aside the conveyance until the actual discovery by them of the existence of the conveyance or the discovery of facts sufficient to put a prudent person on inquiry. So held by the Kentucky Court of Appeals in the case of Ward vs. Thomas, decided December 4.

Although it is the general rule that ordinarily it is not necessary for one partner to give his consent in order to bind the firm where other partners execute a note in the firm name for a partnership debt, yet one partner cannot, against the objection of his copartner, execute a partnership note that will bind the objecting partner, where the payee of the note at the time of its execution has knowledge of such objection. Moffitt vs. Roach et al., decided by the Supreme Court of Indiana on the 12th inst.

Declarations made by an agent in the course of a transaction in which he is authorized to represent his principal are the declarations of his principal, according to the decision of New Jersey Court of Chancery, in the recent case of Gifford vs. Landrine. In order to entitle the declarations to have this effect, however, the relation of principal and agent must first be established by competent evidence. Declarations of the person alleged to be the agent are not competent to establish the fact of agency.

One Cole sold the good will of his milk route to Russell and others and about six months afterwards began selling again. Some of his former customers left his successors and purchased milk of him again. Russell and the others brought a bill in equity against him (Russell et al. vs. Cole) to restrain him from selling milk along the route which had been sold by him to them. Judge Holmes, of the Massachusetts Supreme Court, held that the sale of the milk route precluded the defendant from selling on the streets of that route, and he granted the injunction asked for.

A corporator whose membership is denied has a right to have it established, and may maintain a suit for that purpose, according to the decision of the Indiana Supreme Court in the case of the Tipton Fire Company vs. Barnheid, decided on the 13th inst. The court further held in this case that in equity the property of a corporation is regarded as belonging to the individual corporators, that they are entitled to have their rights and interests in it protected by equitable relief, that injunction will lie at the suit of a corporator to prevent the misappropriation of corporate property, and that in an action brought for that purpose the corporation is a proper party.

When personal property, such as a mowing or reaping machine, is sold with a warranty and there is a breach of that warranty, the property sold not being as represented and warranted by the vendor, the purchaser may either return the property and rescind the contract or he may affirm the contract and sue for damages for the breach of warranty. In the latter case he affirms the contract, and the amount which is then *prima facie* due to the vendor is not the reasonable value of the machine but the contract price, and the only reduction allowed is that which results from the breach of warranty. Weybirch et al. vs. Harris et al., decided recently by the Kansas Supreme Court.

Under the provision of the Fourteenth Amendment to the Constitution of the United States that "no state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, * * * * nor shall any state * * * deny to any person within its jurisdiction the equal protection of the laws," school authorities are not required to furnish each person attending school, without regard to sex, color or age the same privileges in the same place and under the same circumstances as those enjoyed by others attending school. So held in the case of People ex rel. King vs. Gallagher, in which the New York Court of Appeals decided that the Board of Education of Brooklyn may establish separate schools for colored children and exclude them from schools established for white children.

Upon a breach of the condition of a mortgage of personal property the legal title to the property mortgaged becomes vested in the mortgagee, according to the recent decision of the South Carolina Supreme Court in the case of Reese vs. Lyons et al. The court further held, in this case, that, after condition broken, a tender of the mortgage debt which is not accepted will not revest the title in the mortgagor, and does not destroy the right of the mortgagee as legal owner to sell the property. After breach of the condition of the mortgage the only right which the mortgagor has is either to bring an action to redeem the mortgaged property, which must be commenced before the foreclosure of the mortgage by a sale, or an action against the mort-

gagees to account for any surplus proceeds of the sale which might remain after satisfying the mortgage debt.

Anything done at the legal home of a corporation under the authority of law which discharges it from liability there discharges it everywhere, according to the opinion of the Supreme Court of the United States in the case of the Canada Southern Railroad Company vs. Gebhard et al., decided on the 10th inst. This was an appeal from the judgment of the United States Circuit Court for the Southern District of New York in favor of the complaining bondholders who did not assent to the plan of reorganization of the Canada Southern Railroad Company. The court held that the Arrangement act was valid in Canada, and had the effect of binding non-assenting bondholders within the Dominion by the terms of the scheme, and that the courts of the United States should give it the same effect as against citizens of the United States whose rights accrued before its passage. Judge Harlan strongly dissented from the decision.

In the case of Tootle et al. vs. Stine et al., recently decided by the Kansas Supreme Court, it appeared that the appellee's wife was the owner of a stock of goods valued at $3,800, and that he was permitted by his wife to carry on the business of selling the goods as a retail dealer in his own name. Afterward the appellee bought on credit other goods for the store to the amount of $500, and continued to sell at retail for a period of three months, at the end of which time the goods on hand were exchanged for real estate. This was at once actually occupied by the appellee and his wife and family as a homestead, and the conveyance was taken in the name of the wife. The Supreme Court of Kansas, affirming the opinion of the court below, held that, it not appearing that the goods bought by the husband on credit or any of the proceeds thereof were a part of the purchase money or consideration for the homestead, the homestead was not subject to the claims of the creditors from whom the husband purchased the $500 worth of merchandise.

The question under what circumstances a person is to be regarded as a "guest," so as to make an innkeeper liable for the loss of goods belonging to such person, was recently before the Queen's Bench Division of the High Court of Justice in England for consideration in the case of Strauss vs. The County Hotel & Wine Company (Limited). In this case it appeared that the plaintiff on alighting from a train had given his baggage to the hotel porter with the intention of stopping at the hotel. Soon after his arrival at the hotel he changed his mind and said he should not take a room there but required some refreshments, upon which he went at first into the coffee-room and afterwards, by direction of the porter, to a refreshment room at the station which communicated with the hotel by a covered way and was under the same management. The plaintiff's baggage, which had meanwhile, at his request, been placed by the hotel porter in a lock-up room for baggage of passengers at the station, was afterward discovered to be missing. The plaintiff thereupon brought suit against the defendant to recover the value of his lost property. Judge Stephen at the trial directed a nonsuit on the ground that there was no evidence that the plaintiff had become a guest at the hotel. In this decision he was sustained by the Court (composed of Coleridge L. C. J. and Matthew J.), who held that under the circumstances no liability attached to the defendant as an innkeeper.

The case of Coates et al. vs. Merchants' National Bank of St. Louis, decided by the Missouri Supreme Court on the 10th inst., involved a point of considerable importance to bankers. In this case it appeared that the Merchants' National Bank of St. Louis was the correspondent and depository of the Mastin Bank of Kansas City, and as such had in its hands between $20,000 and $30,000. The sum to the credit of the Mastin Bank was claimed by Coates in virtue of an assignment made to him on the 3d of August, 1878, by the Mastin Bank of all its effects and assets for the benefit of creditors generally. The money was also claimed by various holders of checks drawn by the Mastin Bank upon the Merchants' National Bank, all of which bore an earlier date than that of the assignment. None of the checks, however, had been accepted. The Merchants' National Bank filed a bill in equity setting forth substantially the above facts and praying that the claimants be required to interplead. In the lower courts it was held that the assignee (Coates) was not entitled to the fund, and a distribution of it was made among certain of the check holders. The Supreme Court, reversing these opinions, held that a check drawn by a depositor upon his depository for part of the debt did not, until it was accepted, transfer or assign to the holder either a legal or equitable claim to so much of the fund as the check called for, nor did it give him a lien thereon. It decided, therefore, that the fund in dispute was properly payable to the assignee for proportional distribution among the creditors of the Mastin Bank whose claims had been or might be allowed by him in due course of administering the trust.

BUSINESS NOTES.

J. D. Leslie, Bloomington, Ill., has published a card offering for sale lists of grain merchants and millers, and refers to the Bradstreet Mercantile Agency. He is doing this without the consent of the Bradstreet Company.

There were 190 failures in the United Kingdom reported to *Kemp's Mercantile Gazette* for the week ending December 5, against 242 and 251 in like weeks respectively of 1882 and 1881. Of these England and Wales had 170, against 217 and 235 in 1882 and 1881; Scotland 19, against 22 and 10, and Ireland 1, against 3 and 6.

According to recently published figures regarding the telephone service in France twelve offices in Paris transmit about 150,0000 messages a week to their subscribers, while at some of the chief cities in the provinces the average number of messages transacted weekly is 33,000 at Lyons, 15,000 at Marseilles, 6,319 at Bordeaux, 5,669 at Havre, 2,565 at Nantes, 1,243 at Lille, 514 at Rouen and 400 at St. Pierre-les-Calais.

The *London Labour News* of December 8 says that the notices of an intended strike given by the colliers expired on the preceding Saturday, but the men continued at work, waiting the decision of the Miner's Conference. Building, ship-building and marine engineering were active. Laborers were in demand on railway and tramway constructions. The Sunderland engineers' strike continues. The ship-building iron-workers of Greenock and Glasgow have accepted a reduction of 5 per cent. in wages.

The following national banks have been organized: The Merchants' National Bank of Muskegon, Mich.; capital $100,000; John Torrent president; William B. McLoughlin cashier. The First National Bank of Bedford, Pa.; capital $50,000; Edward F. Kerr president; Latimer B. Doty cashier. The Concordia National Bank, Kansas; capital $50,000; C. W. McDonald president. The First National Bank, of Grand Forks, Dak., has elected John McKelvey president in place of H. G. Stone.

An effort is making, according to the correspondent at that city of the Frankfort (Germany) *Zeitung*, to rehabilitate Bremen as an important cotton port and market. This position, it is said, it has lost owing to sharp practices in selling upland cotton at the interior for Orleans. Havre and Liverpool have dimmed its glory as a cotton port, but it has been thought that, with a reform in its long-credit method of doing business and stricter sales on grade, the present would be a favorable time to revive its interest in cotton.

The Cincinnati Chamber of Commerce reports that the trade in crockery, china, glassware, etc., in that city this year has greatly increased. In crockery and china there was a decline in prices of about 10 per cent. The number of potteries throughout the country has greatly increased, but the potteries in Cincinnati have done a good business. Tile-making, among the other industries, has come in vogue. In glassware the aggregate value of Cincinnati's trade has increased 10 per cent.

The past season has been very favorable for the flour trade in Cincinnati. The receipts have exceeded those of any previous year, aggregating 1,144,464 barrels against 779,625 in 1881–82. The shipments reached 1,014,379 barrels against 612,829 in the preceding year. The average price for family flour at Cincinnati has been $4.76 against $6.18 in 1881–82; for extra $4.05 against $5.56.4; for superfine $3.46.2 against $4.81.8 in 1881–82. The stock of flour at Cincinnati June 1, 1883, was 36,306 barrels against 34,257 at the corresponding date in 1882.

The official report of the damage sustained by the alluvial parishes of Louisiana from inundation early in 1882 has just been made public. It says that the total number of acres of plant and cane lost was 33,043; value of that lost $2,954,917; value of stubble cane lost $2,067,410; of rice $106,898; value of cotton lost $2,959,833; of corn $1,102,497; of peas, potatoes and miscellaneous crops $207,294; losses in stock, animals, etc., $538,079; in buildings, fences, etc., $674,170; in labor $994,494; in unsuccessful defense of levees $304,077; other losses $152,541; estimated quantity of arable land inundated 606,674 acres; reclaimed by levee protection 1,857,700.

The Buffalo *Commercial* in reviewing the lake trade of that city says the receipts of all kinds of grain, including flour, during the past season were 76,540,000 bushels, against 58,757,000 last year, and 61,183,000 in 1881. The imports of lumber aggregated 237,729,000 feet, about 3,000,000 feet less than last year and a trifle more than those of 1881. Ten years ago the total of shipments of coal from Buffalo by lake was 390,564 tons; this year it was 1,259,528 tons. The average freight for coal was about 83c. a ton. The shipments of cement reached 230,035 barrels, 50 per cent. in excess of the best rate in previous years; and 3,066 tons of new vessel tonnage were constructed during the year.

During November the total number of emigrants reaching the United States was 35,393, against 40,625 in November, 1882. The following table, prepared by the National Bureau of Statistics, shows the number of immigrants (and nationalities) received during November and eleven months ending November 30:

	November,		Eleven months ended Nov. 30,	
	1883.	1882.	1883.	1882.
England and Wales	4,245	5,280	76,207	74,696
Ireland	1,997	2,177	62,627	68,064
Scotland	551	745	19,111	15,638
Austria	1,676	958	10,445	15,341
Germany	14,360	15,803	173,169	221,576
Italy	1,344	1,890	28,276	27,044
Norway	639	775	19,497	25,911
Sweden	1,058	1,887	28,130	57,890
Dominion of Canada	4,877	5,892	58,016	79,375
All other countries	5,246	5,218	60,922	101,141
Totals	35,393	40,625	536,430	686,676

A company, with a cash capital of $1,000,000, is organizing to establish stock-yards at Omaha. The promoters of the enterprise are men long identified with the industry in various parts of the country, and they expect to place Omaha in the front rank as a distributing point. The movement seems to have started in the purchase by a number of Scotch capitalists of 1,900 acres of land near the city and large droves of cattle in Nebraska and Wyoming. The stockholders of the Council Bluffs yards are the largest investors, and will move their business across the river. Some 400 acres will be devoted to buildings and pens, and operations will begin early in the summer. There seems to be no reason why Omaha should not be as successful as Chicago and Kansas City, for its situation is very advantageous and its railroad facilities the best. Kansas City has in some respects gained ground more rapidly than Chicago, and it is thought that Omaha holds out as much promise as the Missouri town.

A correspondent of BRADSTREET'S at Nashville, Tenn., says that that city is enjoying great prosperity. On nearly every street improvements are making and new buildings going up. This is true of the suburbs also. These residences range from those costing $40,000 to the humblest structure. New manufacturing establishments are building continually, and all are filled with orders. There has recently been organized a large and finely-equipped safe and deposit company, the only one south of Louisville. Money is only moderately close. A new national bank has been organized, with $600,000 capital. No business failure of any consequence has occurred in Nashville during the year. The trade, both wholesale and retail, has been better than usual, and collections in some instances are unusually good. A traveling salesman of one of the largest houses in Nashville reports good sales and collections. It is added that any manufacturing or industrial enterprise going to Nashville, properly indorsed and with good business prospects, can readily obtain all the money needed to carry it on.

The British Board of Trade returns for November show that the total value of exports was £20,054,698, against £20,292,948 in 1882, and £20,713,164 in 1881. The total for the eleven months is £220,858,642, against £223,305,605 in 1882, and £213,773,957 in 1881. The declared value of imports in the month was £36,526,437, against £34,901,910 in 1882, and £34,269,784 in 1881; and in the eleven months, £391,615,801, against £376,431,902 in 1882 and £362,278,090 in 1881. An examination of the details of eleven months' imports shows that cotton yarns have gained £23,000,000 over 1882, and colonial and foreign wools £10,000,000. The cotton yarn exports for eleven months in three years have not varied materially. The exports of cotton manufactures in 1883 are about 20,000,000 yards less than in 1882 (eleven months), and 34,000,000 yards less than in 1881. The loss to China and Japan (cotton manufactures) since 1882 is 8,000,000 yards exported, Bombay 2,500,000 yards, Madras 3,000,000 yards, Bengal 8,000,000 yards, Straits 2,000,000, and Australasia over 2,000,000 yards. The number of yards exported to the United States in eleven months of 1883 was 4,093,800, against 3,379,100 yards in eleven months of 1882, and 3,694,000 yards in 1881.

The Charleston *News and Courier* calls the attention of South Carolina farmers to the advantages they possess in the growing cultivation of the small grain crops, the record of the same during the past few years and the outlook. During the crop years ending in the calendar years named the product of the State in bushels, and the values were:

	Indian corn.	Wheat and oats.	Total grain.	Value.
1880	11,767,099	3,677,863	15,444,962	$10,811,473
1881	8,099,165	3,902,656	12,001,821	8,401,274
1882	17,045,737	9,894,940	26,940,675	18,858,472
1883	11,079,738	6,431,711	17,500,000	12,250,000

The area of wheat now sowing in South Carolina promises 20 per cent. increase over 1882, which means 700,000 acres. At the average rate of production per acre, as indicated in the table given, this area suggests an approximate wheat production of 10,000 bushels. This, with a corn crop equal to last year's, would furnish an aggregate grain crop in 1884 amounting to 27,000,000 bushels. It is added that 30,000,000 is more than likely to be the total, as the seed has been sown with more than ordinary care and the pains to harrow and top-dress are very generally noticeable. At 70 cents per bushel (as the average) a crop of the dimensions stated would be worth to the South Carolina farmers $21,000,000, would be equal to 525,000 bales of cotton, weighing 400 pounds each, at 10 cents per pound, or to 600,000 such bales at 8¾ cents. The increased attention to cultivation of these crops is a source of self-congratulation to the farmers who have been raising grain. In 1881 the state made 555,468 bales of cotton of 400 pounds weight, and in the great grain year of 1882, 698,592 bales of 400 pounds weight. It is believed the agriculturalists may in this way duplicate their cotton crop, so far as the moneyed returns therefor are concerned.

The wages reduction contest between the Lancashire, England, cotton factory operatives and their employers, involving about 60,000 men, women and children at work there, has attracted widespread attention. The trouble began about two months ago, when the mill-owners decided to enforce a 10 per cent. reduction in wages. It was claimed, of course, that this was necessary to enable them to continue; that the employés could better afford to share in the reduced profits in this way, with steady work during the winter, than to be idle and without wages at all. This view was strenuously resisted, and at a conference between the employers' and operatives' committees, the mill-owners offered to compromise with a 5 per cent. reduction. While this weakened the position of the operatives, as a whole, by winning many of them, it was nevertheless strongly opposed. Circulars and "declarations" have been issued by committees representing both parties, from which it is gleaned that a very intelligent and far-reaching discussion of the condition and outlook of the manufactured cotton goods industry has been carried on by both masters and men. A chief objection to the 5 per cent. reduction is that it will accrue to the consumer and not to the proprietors, thus in no way improving those at issue; and, secondly, that so trifling a reduction will not enable makers to cut prices sufficiently to stimulate a demand. The reply made to this was that the gain from reduced wages would not be permitted to accrue to the consumer, but was intended to be retained by the manufacturer, to enable him to keep his machinery employed. In 1881, in anticipation of a much better demand for cotton fabrics, a request on the part of the men for a 5 per cent. advance was acceded to. The situation is now reversed, and the proprietors of the mills ask a like courtesy and right. In reply to the above a committee appointed by the operatives deny the leading assertions made in the circular from the factory owners; first, that they ever claimed that a 5 per ct. reduction in wages would accrue to the consumer, the margin being too small. They agree with their employers that new or extended markets must be obtained in order to keep the demand up to the supply, but in the absence thereof deny the right to reduce wages, and insist that shorter hours be the remedy in order to cut down the supply, that being the end in view. The committee conclude by strenuously advising the men (their companions) not to strike, urging that the difficulties are too many; that there are those ready and waiting to take their places. The idea of biding their time is, however, suggested.

FINANCIAL.

There was a strong rally of the Villard securities in the stock market on Monday, presumably based on Mr. Villard's resignation from two of the three great companies he controlled and the accession to the presidency of them of two well-known Boston gentlemen who are large stockholders. A general improvement in the market was hindered by the fact that as the Villard stocks went up Union Pacific went down. This stock, however, reacted on Thursday on the approval by the directors of the company of the famous proposed tripartite alliance, and the general market was stiffened by it. Part of the advance was lost yesterday again, and the market was again heavy in sympathy.

THE LOAN AND INVESTMENT MARKETS.

The Villard stocks broke the market last week, and as every trader in the street seemed to be selling them short, the leaders of the bear party organized a rally in order to reduce so inconveniently large a short interest. They had also doubtless kept well informed of the movements of the bankers and other creditors of the unfortunate Oregon Transcontinental and Northern Pacific companies and were prepared for the developments of Monday morning last. The street generally, however, had no intimation of what was coming, and when the Oregon Transcontinental stock and Northern Pacific preferred began to advance by leaps and bounds it was, in a sense, lifted off its feet. By noon the news was out that Mr. Villard had resigned the presidency of the Oregon Transcontinental Company and of the Oregon Railroad & Navigation Company, to be succeeded in the first by Mr. Endicott and in the second by Mr. Coolidge, both of Boston, and large stockholders in the companies. Mr. Endicott, it may be remembered, was the gentleman who, some two or three months ago, publicly certified that he had made an examination of the condition of the Oregon Transcontinental Company and found it quite satisfactory. It was true it had hypothecated some of its securities, but arrangements were being made by which it would soon get them back, and the company would then be in as sound a condition as ever it was. Where Mr. Endicott got the information on which he made this statement, so widely at variance with the facts which have since come to light, is not certain. The supposition is that he said what Mr. Villard told him, and accepted as truth some figures or memoranda supplied him from the same source, without personal examination of the books of the concern. Anyway, it is abundantly evident now that he and the other New England stockholders consider themselves to have been grossly deceived. Hence the enforced resignation of Mr. Villard. That gentleman has issued, through the usual channel, an official statement, in the form of an interview, of the causes of his retirement, which are explained in a smooth and altogether lovely way; but it attracted not the slightest attention, or was deemed worthy of comment in the press or elsewhere, for the causes lay so much on the surface that everyone could see them for himself, and that a man should desire to cover his retreat in the best possible way was natural enough. Mr. Villard still holds the presidency of the Northern Pacific Company, and says he shall hold it until a majority of the stockholders of that company desire otherwise. The cause of his remaining there has been variously explained. Some say he is allowed to hold on until the present tangle between the Northern Pacific and the Oregon Transcontinental companies has been somewhat straightened out, as to drive him out altogether at this time might increase the confusion. Others say he remains there temporarily in order to let him down easy, while predictions are freely made that if he does not resign before the next stockholders' meeting he will not have a chance to resign after it. It is a singular coincident that the day on which the ex-great railroad magnate moved into his new palatial residence in this city was the day he was formally driven from power, for everyone considers that his tenure of the presidency of the railroad company is merely on sufferance. The people who have now taken control of the various ex-Villard enterprises are the unfortunate firms and banking institutions who are so unlucky as to be its creditors. They have got a good-sized elephant on hand, and it remains to be seen what they can do with it. As to the recent movements of the stocks themselves, as the Monday rally in them was engineered mainly by the bear leaders, and for the purpose of putting out new lines of shorts after covering last week, the quotations rapidly declined again as soon as the object had been accomplished.

It was a singular fact that while these stocks were running up so rapidly Union Pacific was falling with nearly like speed, thus making a market calculated to throw the average trader into bewildering confusion. The price of that stock finally sank to the extraordinary figure of 73⅜, and its movements in the latter part of the week have almost monopolized the attention of the street. The now famous triplicate alliance was the one subject of discussion. The meeting of the railroad managers at Chicago on Tuesday, at which the agreement was to be discussed and finally acted upon, was adjourned without day as soon as the parties met. At the same time it was stated that a meeting would be held in this city the latter part of the week, at which all interested in the compact would attend. The cause of this change of programme seems to have been the development of some differences of opinion among the Union Pacific directors about signing the compact, which, it appears, was drawn up by the general manager of the company. It would seem that the directors of this company, including the government directors, have been somewhat more ornamental than useful in the past, and it was assumed on the present occasion that the action of the general manager would be ratified as a matter of course. The unexpected appearance of opposition in the board forced the submission of the plan to a general meeting of the directors, which was held in this city on Thursday. At this meeting the plan was discussed, explained and formally approved, and the general manager was instructed to invite any other companies to join besides the Rock Island and St. Paul roads. It was announced that Mr. Gould had signified his desire to have the Wabash and Missouri Pacific roads admitted to the compact. When the making of the compact was first announced Mr. Gould declared himself opposed to it, and said, or was quoted as saying, that it would not receive the assent of a majority of the Union Pacific board. That he has changed about, and come in with his own roads, indicates that he has been able to make better terms than were originally offered him, or that, seeing there was no help for it, he has bowed to the inevitable. The pith of the agreement is said to lie in a clause prohibiting the contracting parties from building into each other's territory for the space of time the agreement runs—asserted to be twenty-five years. If such a clause exists it is self-evident that the compact contains its own death warrant. The idea of the managers of these corporations parceling out territory among themselves for a quarter of a century in such a country as this is preposterous. The compact including the Union Pacific, St. Paul and Rock Island roads, and the Wabash and Missouri Pacific having joined, there remains of the roads interested the Northwest and the Chicago, Burlington & Quincy which are yet to be heard from.

The stocks of all these roads, with the exception of Union Pacific, have remained comparatively steady during the week, though St. Paul showed some weakness; but after the drive at Union Pacific in the early part of the week it rose again slowly under covering of shorts to some extent, but mainly from the purchases of another pool which, undeterred by the unfortunate experience of many other previous pools formed to support this stock, has been buying it during the week with the idea of putting it back to 80, and selling out at about that figure. The signing of the compact by the board of directors was made the occasion for advancing the price smartly up to 79; but it declined again in a way which suggested the attempt to unload some stock on the strength of the ratification. The last-formed pool in Lackawanna, which finds itself with more stock on hand than people seem willing to buy, promptly availed itself of the strength of the market made by Union Pacific's advance, and unloaded stock enough to seriously affect the quotations. Some blocks of stock of various kinds have been thrown on the market in the past ten days, which the street has it comes from the tin box of Mr. George M. Pullman—another of the many victims of the Northern Pacific collapse. Among these was Ontario & Western, which sank quite alarmingly under the weight, and North River Construction stock, which, not being listed on the Exchange, is dealt in at the subsidiary institution for unlisted securities. A block of West Shore bonds came with it, and the price of these has broken 70, above which it has been held for a long time past.

The loan market continues easy as ever, with rates on call at 2@2½ per cent., as usual. Exchange rates seem to rise and fall half a point every week. In the early part of this week they were reduced to $4.82½ and $4.85; on Thursday they were up again to $4.83 and $4.86. The same report continues to be made of the scarcity of commercial bills in the market. Government bonds show a rising tendency still, under the expectation of the removal of the tax on bank circulation and the continuous calling in of the 3 per cents. The following were the closing quotations yesterday:

	Dec. 14,	—*Dec. 21,*—

COMMERCIAL.

SUMMARY.

The movement of general merchandise during the week showed a falling away as compared with the week preceding. This is in large part due to the customary decline in wholesale purchases just prior to and during the holiday season. In industrial lines wages have been, and are about to be, very generally reduced. The steel-rail mills have nearly all succeeded in arranging with their men for a 10 per cent. reduction. A number of the machinery manufacturers in New England have curtailed production by employing fewer workmen. Thread and print mills are discussing like action. The market for raw iron is very irregular. Prices are obtained at rates best suiting those making them. There has been one sale of Pennsylvania iron of 5,000 tons for rail purposes at $17 per ton cash. Manufactured iron is as dull as ever. Pennsylvania mills have very generally closed down until after the holidays. The orders reported here for steel rails aggregate about 20,000 tons. There have been no important features in the grain markets. Wheat has gained from 1c. to 1⅜c. per bushel since the 14th inst., and corn has lost about ½c. per bushel. The former cereal has had to contest the influence of nearly 1,000,000 bushels increase in the visible supply and a very moderate demand from abroad, while the gain in the visible supply of corn has amounted to nearly half a million bushels, and speculation has been very dull. Provisions closed steady and firm at a distinct advance on the week, pork being held at $15 per barrel and cash lard at 9¼c. per pound. Receipts of hogs at the west have been delayed by the weather, and the home and export demands have been fairly well maintained. Petroleum has been relatively dull during the week. Refined has been in very light request, but refiners have held prices up to 9¼c. for 70 degree test without offering. Certificates have been dull and declining. Anthracite has been stiffened by the proposed measures for a still further restriction of production. The last recorded output shows a gain of 2,500,000 tons over the record for 1882. Ocean freights were dull but steady under light offerings. There has been a steady moderate demand for wool, and the market shows exceptional firmness for the time of year. There were 280 failures in the United States reported to BRADSTREET'S during the past week, 31 more than the preceding week, 44 more than the corresponding week of 1882, and 135 more than the same week of 1881. About 75 per cent. of the failures were those of small traders, whose capital was less than $5,000. Canada and the Provinces had 33, an increase of 1.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: The weather has been unfavorable and business depressed. Accounts are being closed and trade contracted.

From Boston, Mass.: A snowstorm which begun on Sunday night and continued with more or less severity during Monday, Tuesday and Wednesday, has interfered materially with movement and restricted trade in all branches. The holiday business has been particularly affected, and the season is drawing to an unsatisfactory close. Nothing of consequence has been done in wholesale dry goods. Clothing continues very quiet, but wintry weather will enable retailers to clean out their stocks. The number of buyers in the boot and shoe market has decreased, and but few large orders have been received. Wool has been in fair request, and sales foot up a full average. Other raw materials move slowly. Money continues plentiful at the banks, and discounts are easy at 5@6 per cent.

From Philadelphia, Pa.: General business in wholesale lines has been dull during the past week, the only activity noticeable having been in a few specialties for the holiday trade, which is now actively under way. The day preceding Christmas will be observed as a holiday by several of the trade exchanges, and the coming week promises to be a very quiet one in all lines. As to the future business men are hopeful but not sanguine.

From Cincinnati, Ohio: The holiday trade engrosses attention and is liberal. Money is plenty. Good paper sells readily at 6 per cent., but there is a strong disposition to scrutinize well that which is offered. Collections are being insisted more closely than last year.

From Cleveland, Ohio: General wholesale trade continues on a moderate scale, but fully as good as is usual at this time of the year. Business activity is confined to the retail trade in holiday goods, clothing, etc.

From Toledo, Ohio: Trade in all lines is in excess of that in 1882, and just at this time is unusually good. Money is easy, but collections are a little slow.

From Chicago, Ill.: Money active, steady, 6@7 per cent. New York exchange, 25c. discount to par. Collections are fair. The movement of money to live stock and grain districts is liberal.

From Peoria, Ill.: The present cold weather proves beneficial to trade, which at retail is active.

From Evansville, Ind.: There is quite a lull in trade in wholesale lines, and collections are dull. The retail trade is brisk. The weather is cold, with a light snow.

From Louisville, Ky.: The jobbing trade is quiet; the retail seasonably active. The money market is working close and rates are firm at 7 per cent. Exchange weak at 80c. discount.

From St. Louis, Mo.: General trade is quiet and in keeping with the season, but there is little grumbling or doubts as to the outlook, because of the smaller demand. Money is accumulating in the banks, but former rates rule firmly. New York exchange is par to 50c. discount; prime commercial bills are $1 discount.

From Detroit, Mich.: Business of all kinds is seasonably dull, preparations being generally made for stock-taking next week. The weather is favorable for retailers. Trade is in holiday specialities. The money market very easy.

From Grand Rapids, Mich.: The holiday trade is brisk but not up to the average of last year, the decline amounting to about 15 per cent. Trade with jobbers is only fair. Collections are slow.

From Lawrence, Kan.: There has been but little change commercially during the past week. Nearly all lines move slowly. Hardware is fairly brisk by reason of the large number of buildings under construction. Money remains easy and collections fair. Interest on real estate loans, 8 per cent.; on personal security, short time, 10 per cent.

From Topeka, Kan.: General trade is in moderate volume.

From Minneapolis, Minn.: A close money market has been the rule for months, and there is little change for the better. Millers are carrying a large amount of wheat, and the receipts of money from the country are not as large as they should be, considering the amount sent out during the fall. Bankers are not disposed to increase their lines of discount, and there is no prospect of much improvement until after the holidays. Eastern exchange steady at about par between banks.

From Omaha, Neb.: Collections continue slow and the past week has been marked by a number of important failures.

From San Francisco, Cal.: Business is dull except for holiday goods. Jobbers are busy stock-taking. This season as a whole compares favorably with last. New York exchange is 15 to 20 per cent. premium.

From Baltimore, Md.: Notwithstanding the unfavorable weather retailers have been kept busy. Trade thus far has been rather disappointing, and it is claimed to be considerably less than last year.

From Norfolk, Va.: Wholesale grocers and provisions dealers are doing a large business. Retailers and fancy goods dealers are actively employed, owing to the approach of the holidays.

From Wilmington, N. C.: Weather is pleasant but has been very dry for the past two months. General business is fairly active and collections good.

From Savannah, Ga.: The trade of the week is enlivened by the demand for holiday goods, and retailers are fully employed.

From New Orleans, La.: The large demand for money to carry cotton renders the market firm and restricts the movement in securities.

From Galveston, Tex.: The jobbing trade of all kinds has been dull. Collections continue very moderate. New York exchange ¼c. discount.

From Memphis, Tenn.: Business in general is very brisk. In plantation supplies there is a decided increase in volume, with very little variation in values.

From Nashville, Tenn.: Cool weather this week has caused an increase in trade.

INDUSTRIAL.

Reductions in wages in leading industries have been continued during the week and in most instances have been accepted. Three thousand employés of the Edgar Thompson Steel Company, Pittsburgh, have agreed to a 13 per cent. reduction and work will be furnished them without interruption. At the Graff & Bennett mills a 5 and 10 per cent. cut in wages has been accepted by the engineers and laborers respectively, some 1,500 men being affected thereby. At Lancaster, Pa., 175 employés of the Penn Iron Works refused to take lower wages. The works have closed until after the holidays. They will not be reopened unless lower wages are accepted. The Mansfield Mills, New Bedford, Mass., have given notice of a 10 per cent. reduction in wages on January 1. A number of Connecticut foundries and mills have been or are about to begin running on reduced time. One large Hartford machinery firm have cut down their force from 700 to 500 men. The Willimantic (Conn.) Thread Company, employing 1,000 hands, contemplates reducing its output and selling one of its mills to be used for another purpose. The New Jersey Steel Works, Trenton, has given notice of a 10 per cent. reduction in wages, and an iron works near Reading has shut down throwing out 150 men. Rhode Island and Massachusetts print-mill owners declare that lower wages will be a necessity in the near future. It is a noteworthy fact that the same line of argument has been used between New England operatives and operators on cotton goods which come to us in circulars from the Lancashire, England, mill hands and owners. Manufacturers urge that a reduction of wages would bring a decline in price of manufactured cloth and theretore not afford relief. The suggestion to curtail production by shutting down one day each week does not meet with favor. Operatives prefer a week's closing to a reduction of wages. The final conference between the Glass Blowers' Union at Pittsburgh with the Western Glass Manufacturers' Union came to naught, and the outlook is for an indefinite continuance of the strike.

INDUSTRIAL FEATURES.

[By Telegraph to BRADSTREET'S.]

Portland, Me.: There is a more hopeful feeling with manufacturers.

From Providence, R. I.: Owing to the depression in the manufacture of cotton goods some of the largest manufacturers of the finer grades have given notice to their help of a reduction in wages. The example will very likely be followed by others, though Fall River corporations think it possibly better to shut down for a week in the hope that a depletion may make prices firmer.

From Cincinnati, Ohio: There is some trouble contemplated between shoemakers and the factories on account of wages. The efforts of the arbitration committee have so far been unsuccessful. Iron workers have largely shut down until after the first of the year.

From Indianapolis, Ind.: Trade is not very active, there being a general dullness in most lines; in manufacturing there appears a slackness in orders, and most establishments are employing a reduced force.

BREADSTUFFS ABROAD.

The London daily wheat market reports which have been cabled here have afforded little or no encouragement to exporters. The tone there has been dull. Little has been offered, and prices have shown no strength. English country markets have been quiet. At Liverpool wheat has been steadier and corn quiet, but afterward more active. The French country markets were cabled quiet, but afterward ruled fractionally lower. In the preceding week the English trade in foreign wheat offstands was dull. The *Mark Lane Express* last Monday said that "the large and growing visible supply in America is regarded with growing mistrust." Foreign flour was in small supply. Mixed American corn was fairly steady. The *Miller* (London) notes that winter weather is bringing with it a healthier state of the market by diminishing "the influences of supply." There was less wheat afloat from India December 3 by 200,000 quarters than there was a month previously. Chilian and other South American shipments, as well as Russian, were getting much smaller, and if Californian had largely increased, their arrival would scarcely affect winter trade. English farmers were making moderate wheat deliveries, and thus for the next two months British imports will probably be limited to manageable quantities, such as had already been recorded for a week and more. The imports of wheat into the United Kingdom in the ten months ended November 1, in the past three years, in cwts., were:

BRITISH IMPORTS.

Totals	9,769,672	10,180,206	13,751,610

The French wheat markets, centrally and south, are dull. Farmers resist the lowering tendencies of prices. In Germany the tendency of quotations has been upward. Russia has ceased to be a factor in the supply for some time.

The quantity of wheat and corn (maize) on passage December 19 was:

	Wheat, bush.	*Corn*, bush.
To the United Kingdom	17,400,000	2,080,000
To continent	2,640,000	400,000
Total	20,040,000	2,480,000
Compared with the previous week:		
To the United Kingdom	16,400,000	2,080,000
To continent	3,120,000	400,000
Total	19,520,000	2,480,000
Comparison:		
To the United Kingdom ..... Increase	1,000,000	
To continent ..... Decrease	480,000	
Total increase	520,000	
On passage same week 1882:		
To the United Kingdom	19,000,000	1,360,000
To continent	4,800,000	400,000
Total	23,800,000	1,760,000

The report of the Ontario (Canada) Bureau of Industries, says: "The total area of fall and spring wheat this year is 1,676,545 acres, and the produce 21,253,372 bushels. Last year the area was 1,775,337 acres, and the produce 40,921,201 bushels. The average yield of fall wheat per acre last year was 26.3 bushels, and of spring wheat 16.5. This year the average of spring wheat is 16.7 bushels, and of fall wheat only 10.5."

AMERICAN WHEAT MARKETS.

The markets for wheat at New York during the greater portion of the past week were ⅛@⅞c. higher than on Friday, the 14th inst., rather under the rate prevalent at the west. Exports have been quite as light as heretofore and receipts at the west have not fallen away—two notable bear levers. The opposition, however, note the increasing shipments of flour as compared to wheat, and argue that this accounts for the heavy inroads which they claim have been made on the invisible supply. This argument for higher prices is at once contrasted with the heavy stocks held by the United Kingdom, some 4,000,000 bushels in excess of those held at any previous date and 9,000,000 larger than at the corresponding date in 1882. This feature and the fact that Russian wheat is offering for May shipment at 2d. per quarter under current rates serve to gain the end arrived at, and the domestic markets maintain an even average level. Thursday the market closed steady at an advance of ⅛@¼c., due to buying. On Friday the decline was ½@⅝c. under Thursday.

The stock of wheat at New York was 194,171 bushels less than one week previously, 992,044 bushels larger than one year ago and 2,569,002 bushels in excess of two years ago. The stock of No. 2 red winter was 5,127,784 bushels, a decrease of 29,508 bushels on the week.

Speculation in wheat at New York has to some extent taken the place of that in corn, but is light enough in either. An evident disposition to even up on contracts prior to the holidays will unquesably account for this.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended December 15 amounted to 2,225,936 bushels, against 2,496,435 bushels in the preceding week, and the shipments to 482,203 bushels, against 462,874 bushels in the week previous.

The receipts of wheat at the seaboard ports for the week ended December 15, 1883, amounted to 436,333, and in the previous week to 662,260

bushels. The exports from the eastern seaboard ports during the week ended December 15 amounted to 931,953 bushels, as compared with 962,848 bushels in the preceding week.

The course of prices of wheat options at New York and at Chicago (at 1 P. M.) during the week has been:

	New York.					Chicago.	
	Dec.	Jan.	Feb.	Mar.	May.	Jan.	Feb.
Fri. Dec. 14...	$1.11¼	$1.12¾	$1.14¾	$1.16⅞	$1.20	.97¾	.98⅝
Sat. Dec. 15...	1.11¾	1.13½	1.17⅝	1.17½	1.21	..	..
Mon. Dec. 17..	1.12½	1.14	1.16⅛	1 18½	1.21¾	.99⅝	1 00⅝
Tues. Dec. 18.	1.12⅜	1.13	1.15½	1.17⅜	1.21⅛	.98¾	.99¾
Wed. Dec. 19.	1.12⅜	1.13½	1.15⅜	1 17½	1 21⅜	.99⅛	1.00¼
Thurs. Dec. 20.	1.13	1.13⅜	1.15¾	1.17¾	1.21¾	.99¼	1.00¼

INDIAN CORN.

This cereal in the New York market during the greater portion of the week has advanced ¼ @ ½c. only, some less than wheat, thus marking its retirement as the leading speculative option, which it had previously held for some time past. More ease in foreign markets and colder weather west has had some influence in depressing prices. On Monday there was an advance, stimulated by better weather and smaller western receipts. Stock at New York also helped the advance, it having declined 211,650 bushels during the week. This made the stock here 1,504,379 bushels larger than one year ago, and 2,967,094 smaller than two years ago. No. 2 corn is reported here to the extent of 2,169,481 bushels, a decrease of 216,083 bushels as compared with the report December 10. Tuesday was dull and lower. Exporters were indifferent and speculators more so. This insured the decline which resulted. On Wednesday there was an advance in corn options at the west. This stimulated prices here, and cash wheat sympathized. There was little apparent reason for the gain shown in quotations. Options at New York showed an advance of ⅜ @ ½c. on Thursday owing to local bull influences. On Friday the net decline in corn was about ⅜c. per bushel. Exporters were indifferent.

The receipts of Indian corn at Chicago, Milwaukee, St. Louis, Detroit, Indianapolis, Toledo, and Peoria, for the week ending December 15, were 1,802,132 bushels, against 1,777,374 bushels in the preceding week, and the shipments were 952,099 bushels, against 846,432 bushels in the week ending December 8. The receipts at the seaboard ports in the week ending December 15 were 1,064,821 bushels, against 1,170,124 bushels in the preceding week, and the exports were 613,680 bushels, against 657,919 bushels in the preceding week.

The course of prices of Indian corn at New York and Chicago (at 1 P. M.) during the week has been:

	At New York.				At Chicago.	
	Dec.	Jan.	Feb.	May.	Jan.	Feb.
Friday, Dec. 14.....	.05	.64⅞	.65¾	.68⅜	.58½	.58
Saturday, Dec. 15...	.64	.64⅛	.65⅞	.68⅞	..	..
Monday, Dec. 17....	.64¼	.05	.66¼	.69	.59⅞	.58⅝
Tuesday, Dec. 18....	.64	.65	.66¾	.68½	.59⅛	.58⅛
Wednesday, Dec. 19.	.64½	.65⅛	.66¼	.69¼	.61	.59⅛
Thursday, Dec. 20...	.64⅞	.65½	.66¾	.69¾	.61⅞	.59⅞

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Dec. 14.		Dec. 21

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: The fluctuations in grain values have been unimportant this week, and operations on speculative account, as well as for export, have been comparatively light. There is a disposition to hold off until after the holidays. Flour has undergone little change for general sales, but now and then receivers have made small concessions as an inducement to large buyers. Trade, on the whole, has been very quiet in all kinds of mill stuffs.

From Cincinnati, Ohio: Flour has developed no new features. Stocks in hands of consumers are light, and buyers not anxious. The supply of wheat has increased. The milling demand for good quality is steady and prices firmer. Receipts of corn are heavy, but the article is too damp to grade; No. 2 is scarce and firmer.

From Louisville, Ky.: The grain trade is limited to local consumption. Winter wheat is reported in a healthy condition.

From Chicago, Ill.: Wheat is weaker and declining under free receipts, heavy stocks and outside demand, closing nearly at the lowest prices of the week; chief buying is by shorts to fill contracts. Corn is less active, the demand is mainly to cover shorts. The feeling is feverish. Inspection is improving. Oats are quiet and steady. Prices are mainly supported by corn.

From St. Louis, Mo.: All grains are sharply higher. Corn export has been stopped by the suspension of navigation. Flour is slightly higher, but holders decline bids and the movement is small.

From Milwaukee, Wis.: Receipts of wheat for the week have aggregated 375,000 bushels, against 450,000 last week. The stock here is 2,500,000 bushels. There are fair prospects of liberal movements during the rest of this month, the roads being fine, with sleighing in some localities. The shipments eastward are improving. The market is comparatively steady, notwithstanding unfavorable cables and steady accumulation everywhere. There is a fair demand for currency to supply the interior, indicating steady deliveries of wheat by the farmers. Receipts of flour for the week are 67,000 barrels, and the market is dull. Production of flour is about 3,000 barrels daily. There is a fair movement of barley and the market is steadier.

From Minneapolis, Minn.: A sudden change in the temperature occurred on the 16th inst., the mercury dropping to 20° below zero. Since that time it has ranged about zero. There has been but little snow in this vicinity thus far. The movement of wheat has been only moderate. The mills have not been operating to over one-half of their capacity. This reduces the consumption of wheat, and the elevators being of necessity full wheat has been held back. The market has ruled firm and a trifle higher for good milling wheat. No. 1 hard is selling at $1.02½. A moderate business in other grains.

From Topeka, Kan.: Grain and flour are in fair demand.

From San Francisco, Cal.: Wheat weak at lower quotations.

From Baltimore, Md.: The general tone of the flour market has been quiet, with moderate offerings.

From Savannah, Ga.: The demand for grain is very good. Stocks on hand are full enough for immediate wants.

From New Orleans, La.: Grain is nominal, with no receipts. Corn receipts 86,000 bushels; exports 188,000 bushels. Flour is slightly better and the supply is large. Provisions are very scarce and strong.

From Nashville, Tenn.: Flour is quiet but steady. Wheat and corn are quiet.

PROVISIONS.

The week opened with a very mild movement in speculative hog products, although a moderate advance was scored. Delayed receipts of hogs at the west stimulated prices early in the present week, and prices, aided by this and by some direct efforts, advanced rapidly. On Tuesday and Wednesday there were no new features worthy of special notice. The export movement did not show any gains, although well maintained. Domestic consumption is also said to have increased during the past six weeks. The price of hogs and of products at present are more nearly at a level, and speculation is timid. The near approach of the holidays, of course, exerts a depressing influence on speculation. On Thursday at Chicago prices touched the highest point this season, but at New York they failed to feel the full effect of the same influence. On Friday prices closed firm at full prices.

A comparative statement of exports from the seven Atlantic ports from November 1 to December 15 is as follows:

	1883, pounds.	1882, pounds.	1881, pounds.
Pork	8,157,000	5,793,800	8,474,800
Lard	66,569,299	46,149,807	64,849,579
Meats	43,804,841	35,949,715	32,474,123
Totals	118,531,140	87,883,822	105,798,502

The gain, as compared with 1882, is about 35 per cent., as against 1881 about 12 per cent.

The prices for leading hog products at New York on the days named were:

	Dec. 15.	Dec. 17.	Dec. 18.	Dec. 19.	Dec. 20.	Dec. 21.
Lard, west. spot.	9.15c.	9.15c.	9.20c.	9 15c.	9.30c.	9.25c.
Lard, December.	9.00	9.15	9.15	9.05	9.18	9.20
Lard, January....	9.16	9.22	9.15	9.20	9.33	9.28
Pork, mess, spot.	$14.50	$16.75	$14.75	$14.75	$15.00	$15.00

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: In provisions there has been a fair demand. Packers are busy and product plenty. There is very little disposition to sell at present prices.

From Chicago, Ill.: Hogs are active and firm on moderate receipts. Pork weak, closing 25c. under yesterday's outside prices. The demand is mainly to cover shorts. A further decline is prevented by the advance in hogs. Lard is less active and rather weak, and a shade below yesterday. There is not much demand, and no buying orders. Meats are dull and only in small demand, chiefly from the shorts. Many lots recently bought on European orders for export have been resold. Cables say prices here are higher than on the other side.

From St. Louis, Mo.: Cattle are in light supply and higher. Hogs are in large offering and active, with strong prices. Provisions are dull, but firmly held. The southern order movement is stopped by the suspension of navigation, and the up-country demand is light.

From Louisville, Ky.: Pork packing active. Provision are firm, but sales light.

From Milwaukee, Wis.: Hogs are improving very little in quality, and receipts are moderate. The trade has improved since cold weather. Collections are fair. Money is in demand, 6 to 8 per cent.

From Topeka, Kan.: Good steers are scarce. Hogs are in active demand.

From Nashville, Tenn.: Cattle are in good condition and sell readily.

DRY GOODS AND CLOTHING.

The dry goods market for this week has been very dull and without features worthy of mention. As usual at this time of the year, buyers do not care to increase the year's obligations, and trade for 1883, is practically concluded. Merchants are engaged in liquidating to considerable extent, and stocks of seasonable goods carried over will be smaller in proportion than for any previous year. The market for bleached cottons continues dull, the reduction in prices not having the expected effect of reducing stocks to any great extent. The demand for prints has been quiet. A moderate trade has been done in holiday goods, and a fair business is reported in miscellaneous assortments. There is no material change to report in the condition of the woolen market, except that it may be duller. There is practically nothing doing, except in filling previously placed orders, and no improvement is expected before January 1. Dealers are careful not to place any orders on this year's account. The market for clothing continues very dull, the late cold weather having had no material effect on the wholesale business. The imports of dry goods at the port of New York for the week ending December 20 were as follows:

	For consumption.		Withdrawals from Warehouse.		Warehoused.	
Manuf'res—	Pkgs.	Value.	Pkgs.	Value.	Pkgs.	Value.
Wool	811	$314,053	250	$88,872	300	$115,897
Cotton	1,360	396,684	197	78,851	239	71,267
Silk	828	467,707	163	105,793	172	94,857
Flax	1,312	219,177	178	30,356	422	69,200
Miscellan's.	6,325	123,328	2,221	57,688	2,665	31,451
Totals	10,636	$1,522,949	3,009	$367,560	3,805	$382,762

The aggregate value of all classes of dry goods imported into the United States for the week was $1,522,949, against $1,541,387 last week.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The jobbing trade in dry goods has been very light, and with agents business has been almost at a standstill. The only feature of interest continues to be downward tendency in bleached cotttons. A few large buyers at a distance have been ordering, but the low prices are not sufficient to induce local jobbers to stock up. Stock-taking will engage most attention until after the New Year, and another inactive week may be expected.

From Providence, R. I.: The print cloth market is quiet; 64's are quoted at 3½c. less 1 per cent. @ 3⅜c., and 56x60's 3 1-16c.

From Philadelphia, Pa.: Jobbers have been doing a fair trade in holiday goods and occasionally cleaning up broken stocks at concessions, preparatory to stock-taking, but there has been no general activity, and trade in commission circles has ruled dull. The market for cotton goods continues weak and unsettled.

From Pittsburgh, Pa.: Dry goods jobbers are doing an average business for the season and collections are reported satisfactory.

From Cincinnati, Ohio: The dry goods market has been equal to the usual volume for this season, with a better demand for woolens.

From Chicago, Ill.: Dry goods are quiet, about the average for the season. The demand to fill small orders from the interior shows a small increase. Sales of heavy goods are due to the cold weather. Notions, millinery, furnishing and fancy goods are in light request. The city retail trade is more than usually active for the holiday season. There are large sales of dress and fancy goods.

From Peoria, Ill.: Dry goods jobbers report favorable outlook, with a fair trade, equal to last year.

From Louisville, Ky.: Dry goods are quiet and some staples lower.

From St. Louis, Mo.: The dry goods trade has improved the past week, owing to the cold weather causing a demand for winter goods. Some cotton fabrics have declined, but other values are steady.

From Indianapolis, Ind.: In dry goods trade is dull. Money is easier.

From Detroit, Mich.: In dry goods the business is very quiet, December being about even with last year.

From Minneapolis, Minn.: The cold weather has given an increased activity to the dry goods trade, especially for heavy goods. Jobbers report a good demand and satisfactory trade. Great activity is noted in all classes of holiday goods by jobbers and retailers.

From Topeka, Kan.: Money is close and collections moderate. Dry goods outside of holiday goods are only fair.

From Omaha, Neb.: The mild fall weather has served to retard trade in dry goods, clothing and staples. A large amount of fall and winter goods are still held by country stores, and jobbers report it impossible to push sales.

From Baltimore, Md.: Jobbers in dry goods report the market dull and quiet. But few orders are coming in and only for current wants.

From Norfolk, Va.: Dry goods jobbers are not now active. Collections are only fair.

From Wilmington, N. C.: In dry goods more is doing, both by jobbers and retail dealers.

From Savannah, Ga.: The dry goods trade is receiving but few orders, and the movement shows more dullness, except among retailers, who are having better demand.

From Memphis, Tenn.: Jobbers of dry goods report no increased sales during the past week, except in retail departments.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Manufacturers are preparing to start their salesmen for spring orders, and after the turn of the year we look for some activity. At present the market is very quiet.

From Chicago, Ill.: The jobbing trade in clothing is very quiet and restricted to orders for heavy goods.

COTTON.

The market for spot cotton for the week has been slow, but steady. Sales have been light and in small lots; quotations are a trifle lower, closing last night at 10⅜c., against 10 7/16c. last Friday. The total sales foot up 2,144 bales, against 1,992 last week. Deliveries on contract amount to 2,300 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year.

	This week.	Last week.	Last year.
Ordinary	8½c.	8 3-16c.	7¾c.
Strict ordinary	8⅝	8 11-16	8 3-16
Good ordinary	9 7-16	9½	9
Strict good ordinary	9 5-16	9⅝	9 7-16
Low middling	10	10 1-16	9⅞
Strict low middling	10 3-16	10¼	10⅛
Middling	10⅜	10 7-16	10 5-16
Good middling	10⅝	10 11-16	10 9-16
Strict good middling	10¾	10 13-16	10¾
Middling fair	11¼	11 5-16	11¼
Fair	12	12 1-16	12

STAINS.

	This week.	Last week.	Last year.
Good ordinary	7¼	7 5-16	7⅜
Strictly good ordinary	8½	8 9-16	8 3-16
Low middling	9⅛	9 3-16	8⅞
Middling	10	10 1-16	9 13-16

The market for spot cotton closed quiet.

The market for futures has been steady with a moderate demand. The movement of the crop has been very heavy. Prices have been higher. The closing quotations last night show an average gain of 4 points for near months and 9 for later ones. The total sales aggregate 634,000 bales, against 572,000 last week, and 351,700 for the corresponding week last year.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	Last week.	Last year.
December	10.33	10.33	10.22
January	10.42	10.38	10.23
February	10.60	10.53	10.34
March	10.75	10.67	10.47
April	10.89	10.82	10.59
May	11.04	10.95	10.71
June	11.18	11.07	10.83
July	11.29	11.19	10.94
August	11.38	11.29	11.04

The market for futures closed steady.

The southern markets have been quiet and steady. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	To-day.	Last year.
Galveston	14,247	9 13-16	9⅞
New Orleans	47,750	9⅞	9 13-16
Mobile	7,200	9¾	9¾
Savannah	14,800	9¾	9⅞
Charleston	3,900	10	9⅞
Norfolk	10,609	9 13-16	9 13-16
Baltimore	650	10¼	10¼

The total receipts of cotton at the ports since September 1 are 3,200,709 bales against 3,125,603 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	Last year.
Galveston	427,030	453,742
New Orleans	981,931	758,161
Mobile	182,081	192,018
Savannah	482,281	540,731
Charleston	321,736	380,380
Wilmington	73,137	81,807
Norfolk	469,179	462,699
Baltimore	17,980	12,147
New York	4,466	55,208
Boston	55,930	67,781
Philadelphia	6,260	27,330

The total receipts for the week were 247,108 bales, against 280,146 last week, and 255,348 for the same week last year.

The receipts at the twenty-four interior towns usually reported were about 100,529 bales, against 108,604 bales last week and 126,863 bales for the corresponding week last year. The shipments for the week were 89,802 bales, against 88,328 bales last week and 102,777 bales for the corresponding week last year. The stocks for the week were 391,460 bales, against 376,316 last week and 300,703 for the same week last year.

Below will be found the receipts at each of the ports for the week ending December 21, 1883, with comparisons for last week and the same week one year ago:

	Sat.	S. & M.	Tues.	Wed.	Thurs.	Fri.
Galveston	4,780	5,500	2,594	4,019	2,080	1,557
New Orleans	10,470	11,364	21,312	18,121	12,076	13,338
Mobile	2,124	5,058	2,252	1,728	1,307	1,458
Savannah	3,651	6,484	4,757	5,293	5,073	4,717
Charleston	2,257	2,729	1,541	3,239	1,539	2,540
Wilmington	159	970	194	457	315	274
Norfolk	5,314	9,171	3,904	6,478	4,029	4,537
Baltimore	....	2,139	....	157	959	250
New York	1,460	1,453	4,197	2,021	1,229	771
Boston	1,544	1,708	1,087	1,845	1,116	1,114
Philadelphia	68	178	33	123	113	40
Totals	40,736	47,054	41,862	43,481	31,369	30,596
This day last week	55,661	57,942	40,377	34,812	35,645	41,409
This day last year	36,831	49,973	35,749	40,431	36,003	42,775

The market for spot cotton at Liverpool has been easier, with a moderate inquiry, which was freely supplied. Quotations for middling uplands are off 1 point, closing at 5¾d. last evening. The future market has been dull. Quotations show an average decline of about 2 points for all months.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	Last week.	Last year.
December	5 51-64d.	5 49-64d.	5 49-64d.
December-January	5 51-64	5 49-64	5 49-64
January-February	5 52-64	5 50-64	5 49-64
February-March	5 56-64	5 50-64	5 49 64
March-April	5 58-64	5 26-64	5 51-64
April-May	5 61-64	5 59-64	5 54-64
May-June	6 1-64	6 3-64	5 58-64

The market for futures closed easy.

The sales for the week at Liverpool were 51,000 bales (of which 38,000 were American), against 56,000 (of which 40,000 were American) last year. The sales for export were 4,800 bales, against 5,200 bales last year. The sales for speculation were 1,070 bales, against 1,840 bales last year. The amount forwarded was 15,000 bales, against 20,000 bales last year. The stock in port is 573,000 bales (of which 358,000 are American), against 556,000 bales (of which 308,000 were American) last year. The total imports for the week were 109,000 bales (of which 82,000 were American), against 99,000 bales (of which 84,000 were American) last year, and the amount afloat 315,000 bales (of which 265,000 are American), against 398,000 bales (of which 348,000 were American) last year.

The Manchester market closed dull and lower especially for yarns.

The Havre market closed quiet and steady.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The cotton market is dull and easy. Middling uplands are worth 10⅝c., and middling gulfs 10⅞c. The rate of discount on prime commercial paper is 5@5½ per cent. The rate of exchange on New York is at par.

From Philadelphia, Pa.: The demand has been very light and the market has ruled in buyers' favor, though general asking rates are unchanged.

From Cincinnatti, Ohio: The cotton market has been a heavy one. Some large purchases have been made for export, and buyers have been able to shade prices liberally over those of last week.

From Louisville, Ky.: Cotton is dull and easier.

From Baltimore, Md.: There has been a moderate inquiry for cotton, and the market ruled dull and flat.

From Norfolk, Va.: On Monday the cotton receipts amounted to nearly 10,000 bales, the largest of any day since this became a cotton port. The weather is quite wintry.

From Wilmington, N. C.: Cotton receipts continue to fall off. The market is steady, and offerings are promptly placed.

From Savannah, Ga.: In cotton the situation is unchanged, and the market is dull. The stock on hand is larger than on the same date last season. Of all grades there are 123,444 bales.

From New Orleans, La.: Since last week Thursday there have been large receipts of cotton. These result in heavy supplies, which are still accumulating. Spots are depressed ⅛c., and futures 11 to 14 points. The movement of both is fair. It is believed, however, that as some sections are reported already bare of cotton and as the quality of that arriving is very poor, a sudden falling off in receipts may be expected.

From Memphis, Tenn.: The cotton market is steady, middlings being 9¾c. Money is 8 per cent.; exchange par.

WOOL.

The volume of business in leading markets has been moderate, but, all things considered, satisfactory for the time of year. It is the season for stock inventories, book settlements, and repairs of mills, and manufacturers are naturally disinclined to make large purchases of raw material. Nevertheless some fair sales have been made for immediate wants, and the general market has not been so dull as might have been expected under the circumstances. Prices realized in nearly all cases have been as good as at any time during the month, and this is somewhat remarkable on the eve of the holidays when there is usually more pressure to sell than at other times. There is a very confident feeling among holders at all points, and few lots have been ordered sold for account of country consignors. Occasionally, however, shippers have manifested a desire to realize, and in some instances commission houses have become purchasers at the concessions made rather than allow the "bargains" to go to consumers. This fairly indicates the prevalent faith of eastern consignees and dealers. Some concern is felt for the future of general business in consequence of the wide disemployment and reduced earnings of labor, but the prospects for the wool trade are regarded hopefully on account of the meagre stocks in first hands, and the probability that even a partial stoppage of production will not interrupt demand sufficiently to prevent the marketing of the available supply before clip time. Demand at the moment is better for fine wools than for other grades, but all descriptions are firmly held.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: There is no change in wool, and the demand the past week has been quite moderate. Prices are firm, and for X and XX fleeces extreme quotations are very generally asked. The sales of the week have been 1,664,000 pounds of all kinds. Ohio and Pennsylvania fleeces have been selling at 36@38c. for X, and 40@42c. for XX and XX and above. In Michigan fleeces the sales have been principally at 35c., and some lots are not offering under 36c. per pound. In combing and delaine fleeces no change. Stocks are light, and we quote fine delaine at 39@42c. for Michigan and Ohio, and 43@45c. for fine and No. 1 combing. Unwashed wools have been in fair demand and remain unchanged. The best medium sells at 30@32c., fine and medium at 23@28c., and low and coarse from 15@20c. per pound. In California wool very little has been done. Pulled wools are in moderate demand and prices unchanged. We quote choice eastern and Maine supers at 40@42c., and common and good supers at 20@38c. per pound, as to quality. In foreign wools the movement has been light, and no sales of any importance have been made. Some Australia has been sold to arrive at 40@42c. per pound.

From Philadelphia, Pa.: Trade has been fair for the season, the sales aggregating 650,000 pounds for the week. Prices rule firm, and stocks are under good control. Inquiry chiefly for fine clothing, delaine and combing wools.

From Cincinnati, Ohio: Wool is without animation; receipts are light and largely of unsalable grades.

From Chicago, Ill.: Wool is steady. Stocks are low and choice samples of mediums are scarce.

IRON.

American pig iron is very irregular. Prices are nominally as last given, on the basis of $20 per ton for No. 1 X., for spot cash. Various furnaces are selling at odd prices, and any specific market price is open to variation by him who bids for the iron. There has been one sale of pig for rail purposes at an unprecedented figure, $17. But this was made by a furnace enjoying unusual facilities for making the iron cheaply. The importations of Scotch iron have amounted to about 1,000 tons, most, if not all, of which has gone into consumption. These sales have been nominal, but of about the quantity reported from week to week previously. The outlook in the general pig iron market is indeterminate at present. Some few orders have been placed for 1884 delivery at current rates, but not of large extent. Stocks are lower. Manufactured iron is as dull and low as ever. Most of the Pittsburgh mills and a good share of the others in Pennsylvania have shut down for the holiday week, as is customary. The nail makers at the west have ordered a six weeks' stoppage. Steel rails are still quoted at $35 per ton, though there is little reason to believe that this is the bottom figure.

THE AMERICAN IRON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Foundry iron has been more actively dealt in large and small lots at steady though low prices. Forge is quieter, owing to the lessened output of finished iron. Merchant bar is quiet. Nails are dull, but there are hopes of an improvement in consequence of the announcement of six weeks' stoppage of western mills. Steel rails are quiet and weak to sell. Occasional sales of old material in lots of 100 to 500 tons are reported. Construction iron is quiet.

From Pittsburgh, Pa.: The iron market shows no improvement. The Western Nail Association has ordered a stoppage of factories for six weeks. Stocks here are comparatively light.

From Cincinnati, Ohio: The trade in pig iron has been light and prices nominal. The same can be said of manufactured.

From Cleveland, Ohio: Pig iron is selling at cost, and the feeling is that prices have touched bottom.

From Chicago, Ill.: Bar, angle and plate iron are quiet and selling in small lots, and prices are steady. Nails are dull. Stocks are liberal and the feeling rather week. Pig iron is slow and not satisfactory. Moderate stocks prevent pressure to sell.

From Detroit, Mich.: In iron the market is dull and devoid of any noticeable features.

From St. Louis, Mo.: Iron is in small movement. Orders are for only enough to finish out the year. Prices of most grades are unchanged.

THE HARDWARE MARKET.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Hardware, metals and tinners' goods are dull. No change from last week.

From Savannah, Ga.: The iron market has fallen off, but the demand for building purposes in hardware continues fair.

COAL.

The return of colder weather has stimulated the anthracite coal industry even in excess of that caused by the enforced stoppage of work at the mines. There is at present under discussion a plan for half-time at the mines up to April 1. The definite form in which the stoppage will take place has not been formally announced, although it is quite likely that a prolonged season of restricted mining is in prospect. Current prices are quoted as follows: Lehigh, $4.25 alongside, and standard brands $4.40; Scranton and like descriptions, $3.80@$3.90, alongside, for broken; egg, $3.85@3.95; stove, $4.25@4.35. The production of anthracite coal during November, 1883, amounted to 3,198,093 tons, against 2,797,372 tons in November, 1882, an increase this year of 400,721 tons. For eleven months of 1883 the production of anthracite coal amounted to 29,659,886 tons, against 26,526,656 tons, a gain of 3,193,229 tons. The stocks of coal at tidewater November 30, 1883, amounted to 696,380 tons, against 604,865 tons October 31, a gain of 91,515 tons. The total quantity of anthracite mined in 1883 to December 8 was 29,814,816 tons, against $27,299,788 tons in a like portion of 1882, a gain of 2,515,028 tons.

COAL MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Coal is now more active owing to the cold weather, and stocks are ample and prices without change.

PETROLEUM.

The week has been dull in speculative centers, and the tendency of prices has been downward. A few wells redrilled have shown some promise of vitality at times, and this has served to depress quotations a fraction. The action of the bulls has been conspicuous by its absence. The Petroleum Exchange will be closed on Monday next. The proposition to consolidate the New York and the New York Mining & Petroleum exchanges will be voted on by the members of both exchanges to-day. There is some opposition to the plan in the New York Exchange.

The following shows the fluctuations in prices of pipe-line certificates at New York during the week ended last evening:

	Opening.	Highest.	Lowest.	Closing.
Saturday, December 15	1.14½	1.14⅜	1.13¾	1.13⅞
Monday, December 17	1.13⅞	1.14⅜	1.13¾	1.13⅞
Tuesday, December 18	1.14⅛	1.14⅜	1.12⅞	1.12⅞
Wednesday, December 19	1.13	1.13⅜	1.12⅝	1.13¼
Thursday, December 20	1.13½	1.13¾	1.12⅝	1.12⅞
Friday, December 21	1.13	1.13¼	1.12⅝	1.13

The price of refined has been held firmly at figures noted last week. Refiners have not offered oil, but, on the other hand, the demand for it has been so light as to prevent them. Some refined has been secured for January shipment—a small lot. There is no special disposition to buy until after the first of the year. Crude oil in barrels has been moderately active most of the week. Toward the close it was quieter. The naphtha market has been uniformly quiet. Case oil has ranged from firmness with moderate activity to quiet.

Prices, with comparisons at the close of preceding weeks, were last evening:

	Nov. 23.	Nov. 30.	Dec. 7.	Dec. 14.	Dec. 21.
Certifi's, crude	1.18¾	1.16⅝	1.15⅝	1.14¼	1.13
Refined, 70°	9	9	9	9¼	9¼
Crude, in bbls	7¾@8¼	7¾@8¼	7¼@8⅛	7⅝@8⅛	7⅝@8⅛
Case, plain	10⅝	10¾	10¼	11	11
Naphtha	6	6	6⅛	6¼	6¼

The export of petroleum from the United States, crude equivalent, for the week ending December 15, was 12,286,002 gallons, against 7,820,677 in the preceding week. The total export from the United States since January 1 was 619,125,798 gallons, against 592,476,667 gallons in the corresponding portion of 1882, a gain in the current year of 26,649,131 as compared with the gain of 19,340,149 gallons reported last week. The exports from New York, for the week ended December 15, amounted to 7,809,721 gallons, and for the year from January 1 to 504,553,753 gallons, against 466,722,566 gallons in a corresponding portion of 1882, showing a net increase from New York alone of 37,531,187 gallons exported between January 1 and December 8, 1883, as compared with a like period last year.

OCEAN FREIGHTS.

The customary dullness at this season of the year is exhibited in all lines of chartering. Petroleum charters, which until recently have been the most active of any, have been dull and depressed. The demand having fallen away, rates themselves would have fallen but for the scarcity of tonnage. This feature is about all that has sustained the market. Short foreign voyages have been fairly active, but none others. The rates for berth freights have been quiet, a moderate amount only offering.

Our San Francisco correspondent, under date of December 11, writes as follows: "We have had a heavy failure in the shipping trade consequent upon wheat speculations. Last year everyone made money on charters; this year everyone loses. Wheat is firm at $1.85 per cental for No. 1 shipping, which is 2½c. lower than last week. Ships arriving under wheat charters at 57s. 6d. to 60s. have been rechartered at 26s. 6d during the week. One soft-wood vessel was chartered at 21s. 6d. per ton. This gives some idea of the drop in charters. There are about twenty vessels in harbor for recharter and a doren more to arrive, so the end is not yet. There are forty-eight ships of 67,791 tons burthen under engagement in harbor, having a carrying capacity of 100,000 tons; also 134,000 tons disengaged, with 170,000 tons on the way or engaged prior to arrival. The freight facilities are far in excess of last year's. Doubtless the high charters of last season led to undue competition this one."

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: With a moderate supply of tonnage in port and a moderate inquiry, both for oil and grain vessels, the market has ruled very steady all the week. Rates are unchanged.

From San Francisco, Cal.: Ocean freights are without impprovent.

From Baltimore, Md.: The freights market, especially for grain charters, has ruled dull and flat.

From Wilmington, N. C.: Freights, foreign have improved. The feeling, coastwise, is easier.

From New Orleans, La.: Ocean freights are quiet but steady.

GROCERIES.

[By Telegraph to BRADSTREET'S.]

From Cleveland, Ohio: Trade in groceries and provisions is very fair. Merchants in most lines of business appear satisfied with the year's trade and express no fears for the future

From Minneapolis, Minn.: Groceries are in moderate demand, but the trade is not active. Collections are fair, but the check to the movement of wheat has tended to stop the circulation of money

in the country. There is more wheat in farmers' hands than is usual at the close of the year.

From Topeka, Kan.: Jobbing groceries are only fair.

From Savannah, Ga.: In wholesale groceries the trade is fair, but without heavy volume.

From New Orleans, La.: Receipts of sugar and molasses are large and prices have declined slightly. Crop estimates are still about 200,000 hogsheads. Grinding will soon be over. Rice is quiet and steady. Receipts of rough are large.

WHISKY.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: Whisky is without change or incident.

From Louisville, Ky.: Whiskies are moving more freely from bond and maturities; prices are firm.

TOBACCO.

[By Telegraph to BRADSTREET'S.]

From Louisville, Ky.: The leaf tobacco movement is fair sized; offerings are of good quality, and the demand liberal; all grades are firm.

From Savannah, Ga.: Tobacco merchants' sales are not as lively, and the most that has been sold has been upon country orders.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: A number of buyers have gone home to spend Christmas and the boot and shoe market has been quiet with few large orders coming in. Manufacturers are fairly supplied with contracts, but still behind last year. On some grades there is a disposition to shade prices, but this is by no means general, as the rates established on most lines early in the season leave a very small margin and cannot be reduced without loss.

From Chicago, Ill.: Boots and shoes are meeting fair order sales. Stocks are not large. Business is generally satisfactory.

LEATHER.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Leather is quiet and steady.

From Louisville, Ky.: Leather is quiet, with a moderate demand, and prices easy. Hides steady.

From Topeka, Kan.: Trade is only fair in leather and findings.

NAVAL STORES.

[By Telegraph to BRADSTREET'S.]

From Savannah, Ga.: The naval stores market has shown a better demand for spirits, and is held firm for quotations. Rosins are depressed owing to the scarcity of offerings.

From Wilmington, N. C.: Naval stores, spirits and rosin transactions show an improved feeling and better demand. Tar is declining. Crude is steady.

TRADE EMBARRASSMENTS.

There were 280 failures in the United States reported to BRADSTREET'S during the past week, 31 more than the preceding week, 44 more than the corresponding week of 1882, and 135 more than the same week of 1881. About 75 per cent. of the failures were those of small traders, whose capital was less than $5,000. Among the important concerns reported embarrassed were Lane & Son, grain, W. P. & A. M. Parsons, builders, Willett Bronson, real estate speculator, and Bomann & Von Bernuth, importers of worsteds and trimmings, New York city; D. M. & E. G. Halbert, dry goods, Binghamton, N. Y.; Donald Gordon, dry goods, Rochester, N. Y.; The Hartford Engineering Company, Hartford, Conn., and The Standard Coal & Iron Company, Columbus, Ohio. Compared with the previous week the middle states had 63, an increase of 2; New England states 37, an increase of 1; southern states 51, an increase of 8; western states 96, an increase of 7; Pacific states and territories 33, an increase of 13; Canada and the Provinces 33, an increase of 1. In the principal trades they were as follows: General stores 52; grocers 33; clothing 24; hardware and agricultural implements 16; liquors 15; dry goods 14; manufacturers 12; tobacco and cigars 9; shoes 9; drugs 8; fancy goods 8; stationers and printers 7; produce and provisions 6; lumber 6; furniture 5; hotels and restaurants 5; jewelry 5; millinery 5; commission 4; bakers and confectioners 4; builders 3; grain and flour 3; harness 3; men's furnishing goods 2, hats 2; crockery 2; coal and wood 2.

ALABAMA.

BOLIGEE.—R. H. Holmes, general store, has failed. Liabilities about $3,500; assets $1,500.

FLORENCE.—S. Cohen & Co., grocers, offer 30 cents, 15 cents cash and 15 cents in thirty days. Liabilities about $12,000 assets $5,900.

MONTGOMERY.—W. J. Gardner, groceries and saloon, is reported to have been closed by the sheriff.

ARIZONA.

PIONEER.—Wood & Williams, general store, have assigned.

TOMBSTONE.—George W. Walker, cigars, has been attached and sold out.

ARKANSAS.

CHARLESTON.—W. A. Black & Co., general store, are reported to have failed.

LITTLE ROCK.—Bertha Emmich, confectioner, has assigned.

NEWPORT.—Dora (Mrs. R.) Peres, grocer, has assigned. Liabilities $1,300.

CALIFORNIA.

BENICIA.—S. Alexrod, fancy goods, has compromised.

BODIE.—M. Schwartz, clothing, has failed.

COULTERVILLE.—John H. Phillips, mining, has filed a petition in insolvency.

EUREKA.—N. N. Hinckley has filed a petition in insolvency.

GALT.—Henry A. Gear has filed a petition in insolvency.

LOS ANGELES.—D. Kuck, theater and saloon, has assigned.

GRANGEVILLE.—Victor Hoff, general store, has assigned.

MARTINEZ.—J. N. Martinez, saloon, has been attached and sold out.

OROVILLE.—L. Webster, merchant tailor, has been attached.

PLACERVILLE.—Henry Brian, furniture, is in insolvency.

PLYMOUTH.—T. J. Watterson, saloon, has been attached.

SAN DIEGO.—Mrs. S. Williamson, millinery, has assigned.

SAN FRANCISCO.—C. Bannister, hotel, has been closed by attachment.

SAN FRANCISCO —John Corcoran, restaurant, is advertised to be sold out by the sheriff.

SAN FRANCISCO.—Aaron Francis, groceries and hardware, has assigned.

SAN FRANCISCO.—Hemme & Maurer, restaurant, have had a petition filed against them to force them into insolvency.

SAN FRANCISCO.—Miss C. Kelleher, men's furnishing goods, has been attached.

TULARE.—J. F. Adams, varieties, has been closed by attachment.

COLORADO.

DENVER.—McGill & Bottom, hotel, have been closed on a chattel mortgage.

DENVER.—James Turner, tailor, has assigned to Ernest Turner. Liabilities $2,763; assets $917.

CONNECTICUT.

HARTFORD.—The Hartford Engineering Company has been attached and closed by the sheriff. It was organized in December, 1880, with a capital stock of $200,000, and bought property and machinery for $100,000. The company has been short of funds, and last spring called for $80,000 more from the stockholders. The president also resigned about that time, and a reorganization was expected in the present month. A receiver has been appointed.

NEW HAVEN.—Aaron E. Platt, cigar maker, has assigned.

SPRAGUE (Baltic).—Dow & Marin, meat market, have assigned.

DAKOTA.

ABERDEEN.—John Garland, general store, has assigned. The assets are considered larger than the liabilities.

BISMARCK.—V. Shreik, harness, has assigned. Liabilities $2,946; assets $1,788.

BLUNT.—O. N. Bein, saloon, has been closed by attachment.

CANTON.—Lund & Co., general store, have been attached for $10,000.

CARTHAGE.—L. F. Packard, general store, has been closed on a chattel mortgage.

FARGO.—P. V. Raymond & Brother, wholesale grocers, have had a chattel mortgage for $59,000 in favor of the First National Bank and Sweatt & Co. foreclosed.

HOWARD.—Mrs. A. C. Stowe, millinery, has been closed by the sheriff.

HURLEY.—Joseph Allen, general store, has assigned. Liabilities $11,000.

NORTHVILLE.—Martin Brothers, general store, have assigned.

PIERRE.—H. La Page, dry goods, has failed. Liabilities about $2,000.

WHITE LAKE.—C. A. Applegate, general store, has been closed on mortgages.

DISTRICT OF COLUMBIA.

WASHINGTON.—At a meeting of the creditors of G. W. Perkins, grocer, the statement showed liabilities $15,000; nominal assets $6,000; actual assets $2,000. It was agreed to let him continue and pay as soon as he could.

FLORIDA.

FORT WHITE.—Stringfellow & Perkins, general store, have assigned. Liabilities $3,400; nominal assets $6,000.

MADISON.—M. H. Warring, general store, has closed and turned over part or the whole of his stock to his factors.

GEORGIA.

ATLANTA.—Ramspeck & Green, fertilizers, were protested for $7,600 and suspended. Liabilities reported at $75,000. Mr. Ramspeck was also of G. A. Ramspeck & Co., teas and coffees, at Atlanta, and general store, at Decatur, Ga., both of which firms have dissolved by his withdrawal. His brother, T. R. Ramspeck, continues the business at Decatur, and assumes the liabilities of about $10,000.

CANTON.—H. A. McAfee, general store, has been closed by the sheriff.

COLUMBUS.—J. W. Woolfolk, warehouse, has assigned. Liabilities $100,000.

MONTEZUMA.—H. N. Berry & Co., hardware, are being sold out by the sheriff.

STATESBORO.—R. F. Lester, general store, has assigned. Liabilities $9,600; assets $8,000; preferences $2,100.

TALLAPOOSA.—J. F. Crawford, Jr., bar, has been closed by the sheriff.

TALLAPOOSA.—A. B. Jackson & Co., general store, have failed.

ILLINOIS.

ALTON.—R. H. Flagg, carpets, has been closed by the sheriff on executions for $6,800.

BEARDSTOWN.—J. L. Kuhl, grocer, sold out to his brother and preferred two local creditors. Liabolities about $3,000.

BEARDSTOWN.—Sage & Co., millers, have closed down and ask an extension of six months.

BLOOMINGTON.—W. H. Payne & Co., commission, have assigned. Assets $700.

CHICAGO.—The Chicago Arms Company sold out to M. C. Morse, who assigned to S. A. Reynolds. Nominal assets about $7,300.

CHICAGO.—The Chicago Furniture Company has been closed by the sheriff on confessed judgment for $7,713.

CHICAGO.—The Cross Wood Printing Company, signs, has assigned.

CHICAGO.—The liabilities of Mansfield, Zeitz & Co., manufacturers of children's shoes, who sold out, are reported at $10,000; no assets.

CHICAGO.—C. E. Southard, printer, has assigned. Liabilities $21,000; assets $7,500.

CHICAGO.—A. H. Wiser, trading as A. H. Wiser & Co., picture frames, etc., has been closed by the sheriff. Liabilities about $2,500; assets about $1,000.

GREENVILLE.—J. J. Clarkson, agricultural implements, has assigned.

EVANSTON.—Julius Lutz, merchant tailor, has assigned to Frank R. Grover. Liabilities $2,000; assets $349.

MORRISON.—A. C. McAllister & Co., lumber and grain, gave a bill of sale for $10,000 and confessed judgments for over $4,000.

PEORIA.—Samuel Archdale, grocer, offers 37½ cents. Liabilities $900; assets $300.

ROCKFORD.—B. Corcoran, shoes, is offering to compromise.

ROCK GROVE.—H. H. Bolander, general store, has assigned.

RUSHVILLE.—Slack & Gavett, woolen mills, have been closed by the sheriff. The First National Bank, which is a creditor for $50,000, is said to have taken a bill of sale for $45,000. N. G. Slack's private property has been attached for $10,000, principally by St. Louis creditors.

WILLOW HILL.—Stewart Brothers, general store, have failed.

INDIANA.

ANDERSON.—R. D. Scott, grocer, has assigned to J. Bronnenberg. Liabilities about $2,000.

CONNERSVILLE.—M. J. Frankel, fancy goods, has failed.

INDIANAPOLIS.—Robert Stern, notions, has assigned.

KENDALLVILLE.—S. J. M. Loomis, general store and millinery, has sold out to his sister.

LEAVENWORTH.—H. C. Caldwell, produce commission, has assigned to H. Stuckey.

LEBANON.—B. W. Harden, shoes, is reported embarrassed.

LIGONIER.—J. B. Pearce, dry goods and millinery, has assigned.

MARTINSVILLE.—W. W. Kennedy & Co., general store, have failed.

NYESVILLE.—S. R. Welsh, general store, has failed and offers 25 cents.

SAN PIERRE.—Hoffacker & Tinkham, general store, have been closed by creditors.

IOWA.

CARSON.—F. E. Cate, grocer, has failed.

COON RAPIDS.—H. Espey, market, has closed up in debt.

DES MOINES.—Jacob Posner, clothing, has mortgaged his stock for $7,000 to Joseph Hyman.

FLETCHER.—Dodd Brothers, agricultural implements, have assigned.

GRISWOLD.—E. Bosley, grocer, has assigned.

KANSAS.

BELOIT.—Martin Kloos, general store, has assigned and been attached.

MARVIN.—George Behl, general store, has assigned.

KENTUCKY.

LOUISVILLE.—J. F. Spangler, drugs, has been attached.

LOUISIANA.

NEW ORLEANS.—J. M. Gould & Son, wholesale boots and shoes, ask an extension of six, twelve and eighteen months. Liabilities $50,000; assets $80,000.

NEW ORLEANS.—A. F. Himel, produce commission, has failed. Liabilities $46,653; assets $42,410.

MAINE.

BANGOR.—W. S. Nickerson, drugs, recently left town and has been attached for $1,700, the stock being valued at $500; no other assets.

BATH.—Mary J. (Mrs. S. J.) Goldstein, clothing, has been sold out by the sheriff.

BREWER.—Caleb Holyoke, of C. Holyoke & Sons, masts, has been attached for $40,000.

CARIBOU.—E. Le Vasseur, general store, owes $20,000; nominal assets $9,000; actual assets $6,000. He has gone into insolvency.

MECHANIC FALLS.—H. Perkins, livery, has been attached.

OXFORD.—Morris Clark, shook manufacturer, is in insolvency. Liabilities $14,000; assets $2,000.

PORTER.—Jordan Stacy, lumber, has failed. Liabilities about $18,000.

PORTLAND.—Noah Read, hay, has been attached.

WATERVILLE.—A. W. Quimby, clothing, has failed.

YARMOUTH.—W. C. Sweetser, dry goods, has failed and gone into insolvency. Liabilities $7,000.

MARYLAND.

BALTIMORE.—The Baltimore Hydraulic Cement Pipe Works have assigned.

BALTIMORE.—H. W. Jenkins & Sons, cabinet makets, have called a meeting of creditors for the 27th inst.

BALTIMORE.—Elias Kaufman, clothing, has compromised at 37½ cents.

BALTIMORE.—Samuel J. Soper & Co., auctioneers, have assigned.

MASSACHUSETTS.

ASHLAND.—A. A. Coburn, dry goods, has failed.

AYER.—Henry Stone, dentist, has failed. Liabilities $2,500; assets $140.

BOSTON.—The American Carpet Lining Company has failed and offers 50 cents. Liabilities about $20,000; assets $10,000.

BOSTON.—At a meeting of the creditors of George D. Emery, lumber, the statement showed direct liabilities $254,757, of which $12,000 was secured, and contingent liabilities of about $40,000; nominal assets $271,971.

BOSTON.—John McCullough, junk, has gone into insolvency. Liabilities $1,167; assets $15.

BOSTON.—William E. Plummer, leather, has been petitioned into insolvency by the Globe National Bank.

BOSTON.—J. Van Praag & Co., commission merchants, have failed.

BOSTON.—Isadore Weirs, hats, offers 25 cents.

CAMBRIDGE.—L. D. Drury, tobacco, has been attached.

EAST CAMBRIDGE.—The Russ Moulding Company has failed.

FALL RIVER.—Application has been made to force Bromberg Brothers, clothing, into insolvency.

FALL RIVER.—Moses Radin, dry goods, has failed.

HAVERHILL.—Louis Killam, builder, has failed. Liabilities about $20,000; nominal assets $3,000.

HAVERHILL.—Barnett Pizehauski, dry goods peddler, is compromising at 50 cents.

HOLDEN.—Charles Davis & Son, woolen manufacturers, have gone into insolvency.

MALDEN.—Charles A. North, builder, has filed a petition in insolvency. Liabilities $3,124.

MERRIMAC.—Blaisdell & Huntington, coal, have failed, but the business goes on without interruption. They owe $10,000 for indorsements for E. M. Boynton. There are very little available assets. It is said that legitimate debts will be paid in full.

NEW BEDFORD.—William F. M. White, carriage maker, is in insolvency.

NORTH LEOMINSTER.—Putnam & Phelps, curriers, have called a meeting of creditors.

SALEM.—Edward Smith 2d, grocer, will probably be granted an extension. He claims to be able to meet merchandise indebtedness.

SHERBORN.—J. W. Barber, ice, is in insolvency. Liabilities $8,182; no unencumbered assets.

SOUTH FRAMINGHAM.—Richardson & Crafts, straw goods, have compromised at 50 cents and continue as Crafts, Emmons & Billings.

SPENCER.—D A. Drury, boot manufacturer, has falied. Liabilities about $85,000; nominal assets about $70,000.

TAUNTON.—W. A. Etter, grocer, has been attached. Liabilities estimated at $5,000; assets $1,500. He offers 30 cents, which creditors are accepting.

WINCHESTER.—At a meeting of the creditors of William Beaman, pail manufacturer, the statement showed liabilities $37,945; assets in real estate $20,845; stock, accounts, etc., $15,577.

WORCESTER.—Hubley & Co., rags, owe about $14,000; no assets.

MICHIGAN.

ADRIAN.—August Holz, jeweler, has been closed on a chattel mortgage.

ALMONT.—Merritt & Balch, stave manufacturers, have been attached and offer to compromise.

AU GRES.—The stock of J. A. Rogers, general store, has been taken by a creditor, who proposes to settle with others at about 50 cents.

CADILLAC —Van Liew & Beard, grocers, have assigned.

CHARLOTTE.—A. M. Cheney, clothing, has been closed by creditors.

CHASE LAKE.—M. Kirk & Co., grocers, are reported to have failed. Liabilities $3,000; assets about $1,500.

CHEBOYGAN.—John T. Maloney, grocer, has assigned.

CHEBOYGAN.—William Spencer, hotel, has assigned.

COLDWATER.—B. S. Tibbetts, cigar manufacturer, has covered all his assets with mortgages.

DECATUR.—Rasmussen Brothers, cigar makers, are reported making an assignment.

DETROIT.—Isaac Epstein, jeweler, has assigned to Louis M. Smit.

DETROIT.—R. T. Merrifield, drugs, has been closed by creditors.

DETROIT.—Woodford & Niles, agricultural implements, have assigned to F. G. Russell. Liabilities about $6,000; assets estimated at $3,000.

FRANKFORT.—L. Averill & Co., general store, has assigned.

HOMER.—P. N. Failing, grocer, has failed.

IONIA.—Sarah M. Rodman, dry goods, has assigned.

MARLETTE.—Fisher & Sibert, drugs, have been closed by ttachment.

MILFORD.—James Rutherford, general store, owes $6,900; assets, $4,900.

ROCKFORD.—D. R. Stocum, general store, assigned to Neil McMillan. He was recently burnt out.

SAGINAW CITY.—Miss L. F. Clark, millinery, has assigned.

ST. LOUIS.—L. M. Stirchcomb, millinery, has assigned.

MINNESOTA.

ALBERT LEA.—H. O. Haukness, agricultural implements, has been sued and garnisheed.

ALBERT LEA.—C. O. Klevin, grocer, has notified his creditors that he cannot pay.

ST. PAUL.—Sattler Brothers, clothing, have assigned to L. Bergman. Liabilities estimated at $80,000; assets nominally the same.

WADENA.—F. H. Dille, general store, has closed.

MISSISSIPPI.

BRAZELIA.—John R. Cockrell, general store, has assigned. Liabilities $40,000.

MISSOURI.

SEDALIA.—Siebe & Co., tinware, have assigned to Lewis Deutsch. Liabilities about $4,000; assets about the same.

ST. LOUIS.—Hill, Nall & Co., barrels, etc., have been attached for $2,500.

ST. LOUIS.—Miss Anna Paxson, trading as A. L. Paxson & Co., Sunday school books, has assigned to John D. Gibson. Assets $2,782.

ST. LOUIS.—Piper & Co., notions, have been attached for $354.

NEBRASKA.

CENTRAL CITY.—Tyndale Brothers, dry goods, have had a mortgage foreclosed.

CLEAR CREEK.—Parmenter Brothers, general store, have failed.

OMAHA.—John L. Wehrer, blacksmith, is reported to have left town.

ORD.—Stacey, Johnson & Co., general store, sold out to creditors.

ORD.—B. C. White, general store, has failed.

ST. EDWARDS.—The estate of Dr. Whiting, drugs, has been foreclosed on a mortgage.

STEELE CITY.—D. N. Clark, saloon, is reported to have left town.

STERLING.—The Sterling Agricultural Implement Company has closed up.

WYMORE.—George Rightmire, drugs, has failed.

NEW HAMPSHIRE.

CUMMINGTON.—N. B. Crosby, tool handle manufacturer, is in insolvency.

EPPING.—A. R. Thompson, general store, has been attached. Liabilities about $7,000; assets $3,000.

GREAT FALLS.—Theodore King, dry goods, has failed. Liabilities about $16,000.

KEENE.—Bancroft & Roby, provisions, have failed and assigned to H. K. White, who thinks they can pay in full.

LAKE VILLAGE.—H.W. Swazey, general store, has failed. Liabilities about $5,000; assets $1,200. His property has been attached by friends for borrowed money.

NEW JERSEY.

NEWARK.—Mary J. (Mrs. J. N.) Bunnell, jeweler, was advertised to be sold out by creditors.

NEWARK.—Arthur F. Conery, manufacturer of brushes, offers 50 cents in notes at eight, twelve and sixteen months. Liabilities $8,524; actual assets $6,694.

NEWARK.—Daniel McGinnis, saloon, is reported to have left town.

NEWARK.—J. F. Norton & Son, clothing, have failed, and are advertised to be sold out by the sheriff on the 26th inst.

NEWARK.—The liabilities of J. W. Thatcher (agent), commission machinists' supplies, are reported at about $10,000, and the assets are considerably less. It is said most of the consigned goods have been returned to owners.

NEW YORK.

ALBANY.—Edward E. Cook, grocer, has assigned to James H. Mead.

ALBANY.—Van Olinda & Co., commission produce, have assigned to Ellis Van Olinda.

ALBION.—Charles K. Cushman, shoes, has assigned to John Bidelman, giving preferences for $3,800. Liabilities $7,000; assets estimated at $4,000.

AMSTERDAM.—The inventory of Clark & Kline, knit goods, show liabilities about $200,000; actual assets, $78,057.

BINGHAMTON.—D. M. & E. G. Halbert, wholesale and retail dry goods, assigned on the 17th inst. to George F. Lyon. The first preferred creditors are Maggie McNierney $1,100; Mrs. B. Mabury $2,000; Mrs. S. Morgan $3,800; Samuel H. Seymour $2,000; Mrs. S. L. Crandall $1,000; First National Bank of Oswego $9,000; Tioga National Bank of Oswego $5,000; H. B. Claflin & Co. $17,500. The second preferred creditors are The First National Bank of Binghamton $39,600; National Broome County Bank of Binghamton $5,000; Susquehanna Valley Bank of Binghamton $6,500; Charles McKinny $5,000; total preferences $97,500. It is said that on account of poor trade and being pushed to the wall by one of their largest creditors they were finally obliged to assign. D. M. Halbert gave realty mortgages on his dwelling to his wife for $7,097, and to John Claflin $6,000, and a chattel mortgage on furniture to Walter A. Halbert for $1,241. E. G. Halbert gave a realty mortgage on his dwelling to his wife for $5,104 and a chattel mortgage to G. W. W. Dunn for $1,000. The liabilities are reported at upwards of $250,000, and the actual assets will probably not exceed $100,000.

BROOKLYN.—Broad & Ewers, machinists, have assigned.

BROOKLYN.—Abraham Cohen, clothing, has assigned to Marcus Rosen, with preferences for over $5,635.

BROOKLYN.—Sevorin Johanson, furniture, has assigned.

BROOKLYN.—Jane Magill, fancy dry goods, has assigned.

CANANDAIGUA.—George Hill, jeweler, has assigned to David V. Benham.

CANANDAIGUA.—Henry F. Stark, agricultural implements, has assigned.

CASTILE.—Francis M. Stryker, market, has assigned.

GLOVERSVILLE.—Morris King, clothing, owes $15,000; nominal assets $8,000; preferences $7,600.

MIDDLETOWN.—Abraham B. Briggs, manufacturer of paper boxes, has assigned to J. W. Canfield, preferring $825.

NEWBURGH.—The liabilities of J. M Pollock, grocer, are $5,751; nominal assets $2,458; actual assets $1,512; preferences $3,533.

NEW YORK CITY.—John H. Allwood, men's furnishing goods, assigned on the 19th inst. to Ebenezer D. Smith, giving four preferences for $2,358.

NEW YORK CITY.—Henry Armstrong, formerly packing boxes, assigned on the 20th inst. to Henry Rawley. He recently sold out to A. C. Peixotto & Brother for $4,250, receiving $1,000 cash and a chattel mortgage for $3,250.

NEW YORK CITY.—The schedules of Thomas S. Barnes, men's furnishing goods, show liabilities $2,220; nominal assets $1,434; actual assets $714.

NEW YORK CITY.—Bomann & Von Bernuth, importers of worsteds and trimmings, assigned on the 19th inst. to Frederick A. Bernuth, giving preferences to Emily Von Bernuth, $20,000; Hardt & Von Bernuth $11,925; Ludwig Funke $18,000; North Deutsch Bank of Hamburg, $24,600; total, $74,525. The failure is attributed to dull trade, excessive competition and changes in fashion. The liabilities are stated to be about $150,000, and assets $130,000. They have been in business about twenty years.

NEW YORK CITY.—Willett Bronson, real estate speculator and lawyer, assigned on the 20th inst. to Charles H. Russell, Jr., giving preferences for $58,830, the largest being to the Wall Street National Bank $17,124; First National Bank of Paterson $7,304; W. A. Fry $1,445; William Jenkins $1,500; Abner C. Thomas $1,500; Thomas H. Beeckman $17,410; Ira E. Doying $8,252. Mr. Bronson for about six years has been operating largely in real estate, and for some years past he was jointly interested with Ira E. Doying, the latter building and Mr. Bronson advancing the money. They had a disagreement a few months ago which led to a separation, and in the settlement, it is said, Mr. Bronson assumed all the liabilities and transferred several houses to Mr. Doying's wife as the share of Mr. Doying in the operations. Mr. Bronson sold some property to endeavor to lighten the load he was carrying, but was unable to obtain funds sufficient to meet the obligations maturing. It is said that his general liabilities unsecured are about $100,000, exclusive of the preferences and mortgages. It is said that he has intimated that he cannot pay 15 cents on the dollar.

NEW YORK CITY.—The schedules of O. R. Clarke & Co., millinery goods, show liabilities $9,425; nominal assets $5,605; actual assets $3,447.

NEW YORK CITY.—Cranz & Runge, wholesale wines and liquors, assigned on the 17th inst. to Herman Frickenhaus, with preferences for $1,342. The business was started in April last.

NEW YORK CITY.—F. K. Epstein, petroleum broker, has suspended.

NEW YORK CITY.—Conrad Freudenhammer, cigar manufacturer, assigned on the 18th inst. to Henry W. Blumer, giving two preferences for $1,000.

NEW YORK CITY.—The schedules of Goldstein & Branner, men's furnishing goods, show liabilities $4,796; nominal assets $4,172; actual assets $2,729.

NEW YORK CITY.—The Goodwillie-Wyman Company, printing presses and cutters, is financially embarrassed, and will probably go into the hands of a receiver. The liabilities are reported at about $50,000, and it is doubtful if the assets are sufficient to pay in full. G. H. Robinson holds a chattel mortgage on the presses for $16,500 for money advanced.

NEW YORK CITY.—The schedules of Samuel Greenthal, hats, show liabilities $1,529; nominal assets $1,194; actual assets $994.

NEW YORK CITY.—Stephen K. Lane, trading as Lane & Son, commission grain, assigned on the 17th inst. to William B. Putney, giving preferences for $115,062—to George H. Kennedy $33,000; Euphemia F. Lane $18,062; Susan A. Kennedy $24,000; S. V. Tripp & Co. $16,000; Hollister, Crane & Co. $8,000; L. B. Shaw $5,000; the Grain Warehousing Company $8,000; Henry Dusenbury $3,000; D. D. Mangam; S. S. Sprague & Co. The failure is attributed to losses in grain speculation, having been caught on the advance in prices during the previous week. A committee of five creditors recommended that settlements be made on the prices of the 17th inst. The liabilities are variously estimated from $300,000 to $400,000.

NEW YORK CITY.—The Leonard Scott Publishing Company has been attached by C. M. Green for printing done, and a judgment was entered against it for $928 for paper.

NEW YORK CITY.—Lewis May, tailor, assigned on the 20th inst. to Jacob Springer, giving preferences for $1,840.

NEW YORK CITY.—The schedules of F. Mayer & Co., wholesale cloths, show liabilities $2,760,992, of which $218,181 are contingent; nominal assets $1,985,367; actual assets $1,769,374. The assets are as follows: Merchandise nominal $289,590, actual $205,056; book accounts nominal $292,433, actual $256,552; notes nominal $154,046, actual $58,468; cash $388; store fixtures $198; real estate of F. Mayer nominal $1,250,000, actual $744,646; individual assets of B. Mayer $6,399; contingent assets $497,655, mainly the firm's notes lent to various parties for their accommodation.

NEW YORK CITY.—The schedules of Henry Mockridge shoes, show liabilities $8,566; nominal assets $4,005; actual assets $2,627.

NEW YORK CITY.—The schedules of Morgan Morgans, Jr., silverware, show liabilities $18,154; nominal assets $6,280; actual assets $5,775.

NEW YORK CITY.—The schedules of John H. Morrell, storage, show liabilities $203,017, of which $171,400 are direct and $31,617 contingent; nominal assets $200,287; actual assets $20,347. The assets consist of real estate $170,000, mortgaged for $160,348, and the balance is mainly in personal property and debts due him.

NEW YORK CITY.—W. P. & A. M. Parsons, builders, assigned on the 17th inst. to John C. Orr, giving preferences to John L. Haines $7,000; William Stanley $3,000; Richard Kelly $12,000—total $22,000. The senior partner has been in business over thirty-five years and his son has been a partner for about ten years, and the firm had the confidence of the trade. They had nearly completed a block of eleven houses on Eighty-first street, between Madison and Fifth avenues, but as the prices asked were $55,000 and $60,000, they could find no market at present for them. Two creditors pressed them, and not being prepared with ready cash, they hastily determined to assign. The property on Eighty-first street is said to be mortgaged for $418,000. They also built a flat on West Twenty-second street, which was transferred on the 15th inst. to Abraham Greenhall. They also own property at 18 East Thirty-second street, which they bought last winter for $55,000, and altered it at considerable cost.

NEW YORK CITY.—The schedules of Maurice Seidenstock, hotel, show liabilities $7,633; nominal assets $5,142; actual assets $833.

NEW YORK CITY.—The schedules of Samuel Shapiro, clothing, show liabilities $22,852; nominal assets $31,035; actual assets $26,553.

NEW YORK CITY.—The schedules of Siedenbach, Schwab & Co., wholesale clothing, show liabilities $742,193; nominal assets $584,134; actual assets $283,153. Of the liabilities $265,377 are contingent. The actual value of the stock is $71,648; good accounts $156,562.

ONEIDA.—Roberts & Shaughnessy, fruits, have assigned to Alfred Bayliss.

ROCHESTER.—Donald Gordon, dry goods, assigned on the 20th inst. to A. E. Wolff, giving preferences to about 200 creditors, of which 150 are in New York city. His liabilities are estimated at over $250,000. Mr. Gordon was in business as Gordon & Orr, in New York city, from 1871 to 1877, and then went to Rochester. In June last he opened a store at No. 370 Broadway, to work off some of his surplus stock, and it is claimed sold over $50,000 worth there.

ROCHESTER.—The assignment of James Hart, harness, made October 1, has been set aside by the court as being fraudulent. He made a new assignment on the 13th inst., with preferences for $985.

ROCHESTER.—Charles S. Hussey, turkish baths, has as signed.

SYRACUSE.—The schedules of J. S. Atwell & Co., wholesale notions, show liabilities $39,028; nominal assets $21,842.

TIOGA.—Voorhees, Aiken & Co., tobacco sweaters and cigar manufacturers, are reported embarrassed by the failures of B. C. Wickham & Co., bankers, who were partners in the business, and others. B. C. Wickham & Co. carried about $20,000 of the paper of Voorhees, Aiken & Co.

TROY.—Thomas Devine & Son, crockery, have assigned to Anthony Pitts, with preferences for $1,600.

TROY.—The sale of the assets of J. LeRoy Pine, manufacturers' supplies, did not realize enough to pay the first three judgments of $14,000.

TROY.—The schedules of Louis White, furniture, show liabilities $23,914; nominal assets $17,000; actual assets $997.

TRUMANSBURG.—Morton Brothers, clothing, have assigned, with preferences for $7,600.

UTICA.—John Schug, grocer, has failed.

NORTH CAROLINA.

HENDERSONVILLE.—William Price, drugs, is reported to have failed and offering 30 cents.

OHIO.

BRADFORD.—S. Urbansky, general store, has been attached.

CELINA.—J. P. McAfee, hardware, has been closed by the sheriff. Liabilities $20,000; assets $6,000.

CINCINNATI.—W. H. Bryan & Co., commission produce, have assigned.

CINCINNATI.—Cash A. Davis, wall paper, has assigned to William S. Gray.

CINCINNATI.—Dennis Kelly, merchant tailor, has assigned.

CINCINNATI.—Michael Sheridan, shoes, has assigned to Charles W. Baker.

CLEVELAND.—Harry W. Avery, restaurant, has been attached.

COLUMBUS.—The Standard Coal & Iron Company has assigned to Horace C. Stanwood in order to reorganize it. The New York creditors have a plan to reorganize it under the name of the Ohio & Western Coal & Iron Company, with a capital of $5,000,000 and bonds $3,500,000, creditors to take bonds at par for the amount of their claims, the trustees to be D. N. Stanton, John F. Mason and George Chapman, of New York. The old company had an authorized capital of $25,000,000, and was incorporated about eighteen months ago with aview of absorbing the principal companies in the Hocking Valley. Several companies were bought out and 30,000 acres of mineral land purchased, on which over $2,000,000 was expended in openingup and equipping part of the property. W. D. Lee, of Newark, Ohio, was the promoter of the enterprise, Samuel Thomas, of Columbus, president, and among the stockholders were Senators Blaine and Hale, of Maine, Gov. Foster, of Ohio, and Oliver Ames.

FRANKLIN.—A. T. B. Terry, hardware, has assigned.

FREMONT.—H. Coonrod, saloon, has assigned.

GENEVA.—The Enterprise Machine Company has assigned. The company was chartered November 3, 1881, with an authorized capital of $200,000, of which $99,600 was paid in. The liabilities are reported at $70,000.

GREENWICH.—Henry Carr, grocer, has assigned to W. A. Hassler.

HICKSVILLE.—Dillworth, Maxwell & Co., grain, owe about $15,000, of which $8,500 was secured by chattel mortgage covering all the assets.

MECHANICSBURG.—Henry Ropp, general store, has assigned to W. C. Pangborn.

MOUNT VERNON.—M. Hyman, dry goods, has failed.

NEWARK.—M. M. Miller, cigars, has been closed by the sheriff.

PORTSMOUTH.—M. W. Weber & Co., dry goods, have assigned to John F. Brushart.

RAVENNA.—A receiver has been appointed for the Enterprise Glass Company. It is thought the debts will be paid in full, but it will require time to sell and collect the accounts.

RUSHSYLVANIA.—W. N. Vance & Co., stoves, have assigned.

SPRINGFIELD.—J. Detwiler, general store, has been sold out by the sheriff.

WEST LIBERTY.—W. M. Fishbaugh, grocer, has assigned.

WEST LIBERTY.—E. B. Gribble, baker, has assigned to R. N. Jordan.

YOUNGSTOWN.—Cartwright, McCurdy & Co., iron manufacturers, ask an extension. The Eagle Furnace Company also asks an extension.

PENNSYLVANIA.

CALEDONIA.—The Putnam Lumber Company (limited) has failed. It began about a year ago with a capital of $80,000.

CHESTER.—W. F. Cutler, confectioner, has assigned.

CHESTER.—Execution has been entered against William McKane, furniture.

CHESTER.—Judgment for $3,024 has been entered against Richard C. Parker, grocer, and execution was issued.

BRADSTREET'S:

A Journal of Trade, Finance, and Public Economy.

PUBLISHED BY THE BRADSTREET COMPANY,
279, 281, 283 BROADWAY, NEW YORK.

Terms, $5.00 per year in advance, including postage.
SINGLE COPIES, TEN CENTS.
SPECIMEN COPIES WILL BE SENT FREE UPON APPLICATION.

As a financial and commercial newspaper the foremost purpose of BRADSTREET'S is to be of practical service to business men.

Its special trade and industrial reports; its weekly epitome of bankruptcies throughout the United States and Canada, and the summaries of assets and liabilities, are alone worth the subscription price.

The synopses of recent legal decisions constitute an exceedingly valuable feature.

As commercial transactions, in the wider sense, are coming to be more and more conducted on a statistical basis, the information contained in BRADSTREET'S is of the first importance both to producers and middle-men.

THE TRADE AND AGRICULTURAL SITUATION THROUGHOUT THE UNITED STATES AND CANADA IS REPORTED BY TELEGRAPH TO BRADSTREET'S UP TO THE HOUR OF PUBLICATION.

MAVERICK NATIONAL BANK

ENTERED AT THE POST OFFICE AT NEW YORK, N. Y., AS SECOND-CLASS MATTER.

SATURDAY, DECEMBER 29, 1883.

NOTES OF THE WEEK.

The question how to prevent frauds in the administration of the affairs of cities has of late exercised the ingenuity of some leading journals. The opinion seems to be entertained by some of these that stealing can be checked by elaborate system of legislative devices, or, as they are naively termed, "safeguards." It is vaguely hoped that by instituting a sufficient number of these the power of the heads of departments will be effectually put under control, and their activity, in so far as it tends to be vicious, done away with. We question very much whether the history of municipal administration affords any support to this view. The application of checking devices of the character contemplated has usually resulted in the formation of rings under the rule of which affairs have been very badly administered indeed. The difficulty with the general system proposed is that while it prevents the efficient transaction of business, it diffuses responsibility so that all sense of it is gradually lost. Political tricksters, while making skillful use of the letter of such regulations for their own purposes, easily find means to evade the spirit thereof, and, in fact, employ the letter to kill the spirit. The operation of the checking principle is seen in the constitution of the various boards charged with the administration of the public business in the city of New York, which, while very efficient as screens to prevent responsibility from attaching to the individual members, act in reality as clogs and hindrances to the transaction of affairs. The fact is that complexity in administrative systems tends to play into the hands of the unscrupulous. The true corrective of the evils of malversation referred to seems to lie rather in a simple system under which, while increased power for good is conferred on the administrator, responsibility is concentrated and fixed. We are glad to see that the most recent experiments in municipal administration are in the latter direction.

Speaker Carlisle's appointment of Mr. Bland, of Missouri, to the head of the Committee on Coinage, Weights and Measures must be regarded by conservative men as a serious error. Mr. Bland's reputation as a statesman rests principally on his Silver bill, which did not go far to raise his credit with reflecting men. Judging from his past record he will do his best to retain in existence the compulsory coinage system against which the people have pronounced in such an unmistakable way. Whatever may be thought of the expediency or non-expediency of other measures, there can be no doubt whatever of the harmful character of this. Month after month the Treasury statements have been telling the same unvarying tale of the return of the unwelcome silver dollar to the government vaults. The maintenance of this discredited policy must in time result in a derangement of our currency relations. The manifestations of public opinion in opposition to this policy have been unceasing, and it should be abandoned without delay. In giving the control of immediate legislation respecting the coinage into the hands of a man with such a record as Mr. Bland's on the silver question the Speaker has done much to disappoint the expectations entertained of him by the country.

The special committee appointed by the New York Chamber of Commerce to consider the ways and means of preserving the Adirondack forests has been acting energetically, and has gathered much valuable information regarding the causes of the destruction which has been so rapidly going on. It is understood that the Senate committee appointed to consider the subject will report against the proposition to purchase the woodland in bulk. The members fear that any such proposition must either be the result of, or must lead to, a job. They say that all the soft timber near streams has already been cut away, and that what remains is a dense forest, absolutely unmarketable. They add that the very agitation of the question of purchase by the state has already greatly increased the price of the lands. It appears, from statements made by members of the committee, that the state is now acquiring the lands as fast as possible, and at a reasonable cost. It is stated that ten years ago the state owned about 40,000 acres, acquired through non-payment of taxes or otherwise, while to-day the state owns 1,000,000 acres, acquired for the most part through non-payment of taxes.

Some suggestions have been made by the Legislative Committee of the Labor Congress of New Jersey which are not without interest to those who are endeavoring to find a practical substitute for the contract labor system in prisons. The committee recommend the abolition of the contract system and the employment of as many prisoners as possible in producing articles required for state institutions. They further propose that eight hours shall constitute a day's work in prisons and reformatories, and that two hours per day be devoted to the moral and intellectual instruction of the inmates. They advise also that a portion of the earnings of prisoners be placed to their credit, and that after deducting the expenses of their trial, etc., the balance be paid to their wives and children, if they have any, and if they have none, then to themselves at the expiration of their terms of servitude. It is further suggested that the prisoners not needed in work for the state be employed under the "piece price system," and that no more than twenty be employed at any one branch of trade. In order to prevent the goods produced by the labor of prisoners from going upon the market at less than market rates, the committee recommend that a board of appraisers be appointed to appraise the value of such goods, the board to consist of two wage-workers, two business men and one merchant, with a prison official as an advisory member.

Mr. John W. Bookwalter does well to call attention, in his article in the *Mechanical News*, to the importance of the element of foreign agricultural production as a factor in the general commercial situation here. This is a point upon which we have heretofore dwelt at some length, but which has not yet received the consideration which it deserves. The remarkable harvests which have been gathered in this country in recent years and the limited yield of the European grain fields during the same period have prevented the element of foreign competition from assuming in the popular mind that importance to which it is entitled. The enlarged demands upon our surplus food products, consequent upon the diminished production of European agriculture, have been met by our farmers at prices which precluded the competition of European farmers. Owing in great part to these circumstances the American farmer has come to regard his position as an agricultural producer as securing to him a practical monopoly of the world's markets. It should not be forgotten, however, that a period of decreased production here and increased productiveness abroad would in all probability bring clearly into relief the fact that another aspect of the matter is possible; that, in short, our farmers might under such conditions feel much more seriously than they now imagine the pressure of foreign competition. Such a possibility must, as we have pointed out, be regarded as less and less unlikely as time goes on, in view of what is being done in the way of lessening distance and cheapening rates of transportation.

The announcement has been made that the French vintage this year shows a considerable improvement on the average of the last three years. This must be gratifying news to the French wine merchants in view of the fact that, in spite of the artificial manufacture of wine at home, there has been a large increase in the importation of foreign wine into France, while the exportation of wine from France shows only a very slight increase. The announcement should be no less gratifying to the consumers of French wines in view of some recent statistics of adulteration which have appeared. It happened lately, for instance, that out of six hundred and fifty bottles of wine bought in different parts of Paris and analyzed at the municipal laboratory only sixty were pronounced pure. As an illustration of the shifts to which wine-makers in France have been put in consequence of recent deficiencies in the grape crop this incident is very striking indeed.

Professor Leone Levi has been pursuing investigations in relation to the condition of the English working classes, and he has arrived at results not very different from those reached by Mr. Giffen, a summary of which we presented some time ago. He says that estimates heretofore made as to the annual wages of operatives, domestic servants and others have fallen far short of the truth. Comparing the numbers and income of the working classes with those of others, he finds by an analysis of the figures accessible that in thirty years an average family of the lower middle class has improved its position by 37 per cent., while one of the working class has improved by 59 per cent. His researches lead him to the conclusion that the economic condition of the working classes has immensely improved of late years. What these classes mostly need, he thinks, is a greater force of moral purpose, a greater culture of the intellect, a greater refinement of manner and taste, and an increasing capacity to repel what is depressing and to attract what is ennobling in their intercourse of life. It will be interesting to see how those who hold views upon this question opposed to those of Mr. Giffen and Professor Levi will deal with the statistical exhibits lately made by those gentlemen.

THE BUSINESS SITUATION.

The period of reaction from the trade and industrial activity of 1879–80–81 became pronounced early in 1883. The depression has since been aggravated, first, by the looseness which has been permitted to obtain in the making and selling of commercial paper; second, by the deeper distrust of our railway management which has come about and which is justified by the developments of the last few months. But for these immediate causes it is very probable that the United States would have passed through a period of comparatively moderate depression, and this owing to the progress in business statistics which enabled the man of business to receive warning of overtrading before the conditions of a crash had formed. As things are now there is no adequate reason for concluding that the business of the country is to find a still lower level in 1884. But, on the other hand the enforced stopping of mills and a further reduction of wages in the concerns still in operation may bring about a more severe depression. The power of the wage-earning classes to buy and consume goods is a most important factor in sustaining the general merchandise movement, and it is well known that in a period of commercial reaction the jobbing trades are about the last to complain of dullness. The time of reaction is one of economy and real accumulation. As indicated, it is believed that a good deal of progress has been made regarding the means of determining in advance the conditions precedent to a commercial depression, but very much yet remains to be done. Business statistics have resulted for the most part from the organization of trade. Trade organization must be extended and perfected. To this end the merchant must needs give up more of his time to the public side of business. The traffic in commercial paper must be protected to a much greater extent than now from those who deliberately set out to profit by its abuse. The offense of illegitimate speculations on the part of a man or firm whose capital is entirely embarked in his regular business must come to be severely dealt with. Beyond this the direction of American railways must be so far reformed that the shares thereof will be more sought after as secure investments. There is room here also for the healthful intervention of law.

The commercial wreck list of the year is a formidable one. The following table gives the total number of failures reported to BRADSTREET'S during each of the last five years:

COMPARISON OF FAILURES IN THE UNITED STATES FOR 1879, 1880, 1881, 1882 AND 1883.

	1879.	1880.	1881.	1882.	1883.
United States	6,652	4,350	5,929	7,574	10,187
Canada and Provinces.	2,075	839	607	642	1,460

The table below gives the failures during each of the two last quarters of 1881, 1882 and 1883:

COMPARISON OF FAILURES IN THE UNITED STATES FOR LAST QUARTERS OF 1881, 1882 AND 1883.

	1881.	1882.	1883.
Number of failures fourth quarter	1,505	2,267	2,829
Number of failures third quarter	1,140	1,658	2,002
Number of failures six months	2,645	3,925	4,891

The returns of to-day and Monday will increase somewhat the totals for the last quarter of 1883, and therefore of the year's total, but the figures above given will prove to be approximately correct. The number of failures, as the table shows, has gradually increased since 1880. Our full analysis of the failures return for 1883 will be published on January 5.

The following table shows the prices of leading stocks September 1, 1881, the lowest prices in 1883, together with the prices of December 1 and 28. No great improvement on the stock exchanges is to be expected until general activity returns to the industries of the country.

Below we refer to the course of prices in the iron trade and other important lines:

Stocks.	*Sept. 2, 1881.*	*Lowest, 1883.*		*Dec. 1, 1883*	*Dec. 28, 1883.*

Union Pacific	120⅜	84⅞ Oct.	17	88¾	74½
Western Union	87¾	71¼ Aug.	16	79⅝	74½

The year 1883 has been less satisfactory to the iron and steel trades than its predecessor. The latter comprised a prolonged strike at western iron mills and a steady reduction in prices. This year has brought no such disturbing labor agitations, but has continued the contraction of prices below limits which were thought to rest on bed-rock. The first quarter saw the iron trade depressed, as alleged, from fear of unwise tax legislation. None such came, but neither did buyers. The latter do not purchase freely on a falling market, and hand-to-mouth requirements have been the rule. The decline in prices of pig iron has been from $25.50 January 1 to $20@$20.50 cash for foundry No. 1 X. Contracts for season delivery were offered at $24 March 10, and not meeting a response, a cut to $22 was made April 28, and still another to $20 May 19. From this the nominal price was again made $22 June 30 (some grades $23), through July, August and September. The expected Fall demand not appearing, another reduction in price was made to $21 October 1, and a month later, without formal announcement, spot cash prices were made at $20@$20.50, some few grades being slightly higher. Pig iron (No. 1) was quoted at $35 per ton in the spring of 1880, since which the decline has been steady. It was $33.50 in October, 1879, and $18 per ton December 20, 1878. The average annual prices have been: In 1879 over $32 per ton; in 1880 nearly $24; 1881 about $25; 1882 about $27, and this year about $22. Steel rails, which touched $80 per ton in the latter part of 1879, are now quoted $35 at the mill, 1884 delivery. In January, 1882, the price was $56.50, a decline from $60 per ton in December, 1881. At the close of 1882 the quotation was $39, a decline of $17.50 in 1882. Early last spring contracts for rails were offered at $38, and in the summer at $37.50. By fall the figure had settled to $36.50, though not announced. November prices were revolutionized by the Lackawanna Company's cut to $35 at the mill. Excessive production by steel rail mills, unduly stimulated by the phenomenal railway building of preceding years, combined with other and artificial aids, have caused this. The result was the forced closing of several mills and the reduction in wages at nearly if not all from 10 to 15 per cent. Importations of British steel rails have rapidly declined. Receipts for eleven months are 63,579 tons, against 167,142 tons in eleven months of 1882, and 182,051 tons in 1881. The Bessemer (foreign) pig market has been dull and declining. The price in January, 1882, was $27.50, in December $22.50, and now is $20. Refined bar at Pittsburgh in January, 1882, was 2½c. per pound, 2 2-10c. in December, 1882, and is now nominally 1.85c. Over eighty-six pig iron furnaces are reported to have blown out since January 1. The number of mills shutting down over holidays is greater than ever. The outlook is for a period of continued moderation in production well into the first of the year.

Floods and drouth fell upon the winter wheat crop of 1882–83, rust and pest crept in, and, as reported by the government reporters, the harvest was 100,000,000 bushels short of that in the preceding year. This ranks the total, allowing a slight gain for spring wheat, at about (or over) 400,000,000 bushels as against 502.7 millions in 1881–82 and 308.2 million bushels in 1880–81. There were 186.3 million bushels exported as wheat and flour, in 1880–81, in 1881–82 121.8 million, and in 1882–83, 152.4 million bushels. The percentage of flour in the same order has been 19.18 per cent. as compared with the wheat shipped, 21.8 and 43.4 per cent. in 1882–83. Since July 1 exports have been restricted and prices relatively low. The visible supply has increased beyond all precedent, being to-day in excess of 35,000,000 bushels as against 19,418,915 bushels July 1. Farmers have sold their wheat freely, and appear to be still doing so in the face of restricted exports and enormous stocks at domestic and foreign ports. The gross exports from the crop of 1882–83 have been (to December 15 from July 1), but 50,910,918 bushels as against 77,103,772 in a like part of 1882 and 43,475,921 in 1881, and still Russia, India and Australia are offering grain cheap for future delivery. The price of wheat (No. 2 red at New York) opened in January at about $1.11¾, advanced to $1.17 February 2, to $1.24⅜ February 17, and to $1.29 during that month. March 22 it was down to $1.19 and May 11 back to $1.24¼. June 29 it touched $1.16, and July 20 was but $1.16¼. July 22 wheat was $1.22; September 14, $1.15½, whence the decline set in which brought $1.07½ October 19. From this a moderate advance began. On the 21st inst. $1.15 was quoted, and since $1.12⅞ has been reached.

The December Agricultural Bureau report on the crop of Indian corn this year places the revised total at 1,551,000,000 bushels. Prior to September the outlook was for a yield of 1,700,000,000 bushels at least. The net yield is to be compared with 1,624,000,000 bushels in 1882, and 1,194,000,000 bushels in 1881. The exports of Indian corn have been on a more liberal scale than those of wheat, but less than formerly. The total from July 1 to December 1 is 24,807,110 bushels, as against 3,729,724 bushels in a like period of 1882. In 1882–83 the exports were 41,655,653 bushels of corn and meal (the latter 2.4 per cent. of the former), against 44,340,683 bushels in 1881–82 (2.66 per cent. of meal) and 93,648,144 bushels in 1880–81 (1.85 per cent. of meal). The average price of corn in 1882 was 79 7-16c. per bushel, and in 1881 it was 62½c. (No. 2 mixed at New York). From 1875 to 1880–81 the average price was 56.4c., against 74c. as an average price for fifty years prior to 1875. The price of corn on January 5 last was 67¾c., and on the 19th of that month it was 69¼c. February 9 it was 72⅜c., and February 17 74c. From this a decline set in till 58¼c. was touched in June. In July a rally brought 62½c. on the 17th and 65c. on the 24th. September 14 the price was 61¾c., and on the 28th 60c. Another decline realized 57½c. November 2, since when there has been a gradual improvement, in good part due to speculative manipulation and in part to full knowledge of the extent of damage done by the September frosts. The price has since been 65c. (second week in December), and later has declined to 63c. per bushel.

Considering the question of supply and demand, as based on the statistics of the petroleum industry, the past year differs radically from that preceding it. In 1882 the greater portion of the development favored increased production; it increased enormous stocks above ground and lowered prices for the crude product. This year has brought a greatly decreased production of oil, has shown a uniformity of the tendency of the various petroleum districts to yield less and less, has necessitated the drawing on stocks through August, September, October and November, and naturally developed a higher range of prices. The exploitation of the "regions" has been very great, with but little encouragement thus far as to new and rich fields of oil. The main hope in that direction lies in the statement that as unexpected deposits have been discovered, others may be. Following on the prime of the Bradford district came the Alleghany and after that the Cherry Grove tract, and the average annual price of crude per barrel at the wells was, in 1880 down to 94½c., in 1881 to 85¾c., and in 1882 to 79⅞c. This year, thus far, the average annual price is $1.06 per barrel. The average daily production this year (to December 22) has been 2,730,000 gallons, and the exports 1,400,000 gallons. The average daily quantity added to stocks has been 53,000 gallons, which indicates an average daily home consumption of 1,277,000 gallons during the year to December 22. Since December 1 the additions of oil to stocks in tank have averaged 5,000 barrels daily, and for four months prior thereto averaged nearly 7,000 barrels withdrawn daily. Aggregate stocks in tank are over 35,000,000 barrels (of 42 gallons each). During 1883, thus far, average monthly prices for pipe-line certificates have been: January, 93¾c.; February, $1.01; March, 97⅝c.; April, 92⅜c.; May, $1.00⅛; June, $1.16⅜; July, $1.07⅞; August, $1.08½; September, $1.12½; October, $1.11¼; November, $1.15, and, in December (to 22d), $1.14. The average daily runs in December have been 66,000 barrels, indicating a daily production of probably not over 65,000 barrels. Exports from the United States from January 1 to December 22 aggregated 498,381,219 gallons (actual), against 475,776,482 gallons (crude, refined naphtha, etc.), in a like period in 1882. New York continues to monopolize the trade, its share of these exports being 408,001,522 gallons in 1883, against 372,786,020 gallons in 1882. Boston, Philadelphia and Baltimore this year (to December 22) exported 90,369,697 gallons, against 102,990,462 gallons last year—Boston 4,705,625 against 6,893,170 gallons, Philadelphia 75,348,628 against 83,872,703 gallons, and Baltimore 10,141,995 gallons in 1883 against 11,842,350 gallons from January 1 to December 22 in 1882. Germany, the United Kingdom, Belgium, the East Indies, and China and Japan, in the order named, are the principal customers for refined, and France and Spain for crude.

Russia has taken 1.53 million gallons refined this year, against 1.60 million gallons in a like part of 1882. Refined oil 70° Abel test, at New York, for export was 7½c. January 5 last, and is now 9¼c.

The year has been noteworthy in the wool trade, chiefly for the steadiness of the demand and the exceptionally large consumption of the worsted mills. There was a sharp advance in prices as the result of an active trade during February, but with this exception there have been few marked fluctuations and little speculation in the market. The tariff reductions last spring and the prevalent uncertainty to as their effect on the manufacturing trade restrained speculation at the beginning of the clip year and enabled buyers to secure the bulk of the clip at lower prices than in 1882, and a great deal of wool was bought direct from growers by manufacturers. As supplies accumulated in the seaboard markets prices gradually depreciated for several months, and the subsequent recovery during the fall and winter has not been more than sufficient to cover insurance-interest charges and other expenses of carrying. The market closes strong and in good shape. Stock inventories in leading markets are not yet complete, but are likely to show a much smaller amount in first hands than at the close of last year, and interior supplies are small and concentrated in the hands of parties who are financially able to hold them for a paying market. The present condition and outlook of the goods trade are not satisfactory, but there is every indication that available stocks of wool will be wanted before the next clip is ready for market.

LOCAL GOVERNMENT AT PHILADELPHIA.

III.

The enlarged city of Philadelphia received in 1854 a net debt of $16,573,000. Apparently learning nothing from the past, the authors of the organic law of the new city conceived the possibility of regulating the use of credit by a municipality through statutory devices. Bear in mind that the passage of the consolidation act of Philadelphia in the winter of 1853–4 was a great event in the history of the city. Mr. Eli K. Price, a distinguished lawyer who is still living, was sent to the legislature at the instigation of Horace Binney to frame the act. Recall that in 1792 Pitt instituted the plan of providing 1 per cent. sinking funds for all new loans created. Taxes were to be levied for the interest of each new loan, and also for 1 per cent. of the principal, to be appropriated yearly to a sinking fund. In the words used at the time each loan was to be burdened with the seeds of its own destruction. It was calculated that in this way a particular loan would be paid in about forty-five years. By the Philadelphia legislation it was sought to improve upon Pitt's plan by requiring that no loan should be created for more than thirty years, and that a special tax should be levied to insure redemption at maturity. In the language of the statute it was laid down that "no debt should be incurred or loan made * * * without a contemporaneous appropriation of a sufficient annual income or tax *exclusive of loans* to pay the interest and sink the principal of such debt in thirty years." Standing by itself the clause cannot be said to have any definite meaning, the truth being that its intention was left to be construed from facts and customs outside the statute. The intention, it may be presumed, was to follow out the idea of Thomas Jefferson, as set forth in a letter written to John William Eppes in 1813. Jefferson's notion was that no government has any right to contract a debt for a longer period than the life of one generation; also that no money should be borrowed on the faith of the public "without levying a tax in the same instant for paying the interest annually and the principal within a given term, and to consider that tax as pledged to the creditors on the public faith." It was conceived by the Philadelphia law-makers of 1854 that the conditions laid down would act as effective restrictions on the further creation of municipal indebtedness. The aim was, should money be borrowed, to put the city's exchequer into leading strings. Reliance was to be placed upon a statute to compel municipal officers, in the event of their creating loans, to save money with which to meet them at maturity. Again, it was thought that if city councils were forced to levy taxes against the maturity of loans they would hesitate at contracting them. This while the councils possessed a general credit in the loan market. Let us understand still more closely just what was intended. In the event of the creation of a new loan it was to be for thirty years, and the city was directed to maintain a constantly increasing surplus of revenue to meet the debt at maturity. It was expected that variable beings would be able to pursue an invariable course; in other words that men could do for a city what they are never able as a class to do for themselves. A surplus revenue was to be maintained for three decades, notwithstanding that in the light of history this period would comprise one or more commercial convulsions, when it might not be the part of wisdom to tax a community to the extent of providing an excess of revenue over expenditure. Little did the projectors of such a scheme realize of the difficulties in the way of framing a financial theory which is possible in execution. It was calculated that an annual appropriation of $1\frac{2}{10}$ per cent. on the principal of a given 6 per cent. loan in quarterly payments to a sinking fund would "sink the principal in thirty years." Consider then that in 1854 Philadelphia set out upon the policy of contracting thirty-year loans for so-called permanent improvements with the intention of levying a tax sufficient to pay a given debt in thirty years when applied through the medium of a sinking fund. Although debts for permanent improvements might be contracted in particular years, the annual balance-sheet was to always exhibit a surplus of revenue as compared with the amount required for current expenses. Having begun to create new debt, the city councils in 1855 passed a general ordinance establishing a sinking fund for the then existing debt, and pledging the faith of the city that the taxes for the fund should be maintained until the final extinction of the debt. Sinking fund commissioners were provided, and the machinery for the entire scheme was complete.

For the successful working of such a scheme it was essential that the current taxes for ordinary expenditures should be kept fully equal to the outgo. But what was the result. In the very next year, 1855, the Pennsylvania legislature enacted "it shall be lawful for the councils of Philadelphia to authorize by ordinance temporary loans of moneys whenever they shall deem it necessary, provided that such loans shall at no time exceed in the aggregate the sum of $500,000, and that no such loan shall be for a longer period than six months." A few days after the passage of this act, in the spring of 1855, the councils authorized the city treasurer to contract for six months, with the approbation of the committee on finance, for "such sums of money as may be necessary to meet the current demands on the city treasury." With the passage of this law the city entered upon what we have called an elastic or loose credit system. We need not, therefore, be surprised at learning that in August of the same year the councils passed the following resolution:

Resolved, That the city treasurer be and is hereby authorized to indorse all warrants properly countersigned by the controller that are drawn upon the city treasury with his name and date of presentation, and that all such warrants shall be entitled to interest from the date of said indorsements at the rate of 6 per cent. per annum when there shall not have been in the treasury of the city money to pay such warrants on presentation.

On December 20 of the same year $40,000 were appropriated for interest on indorsed warrants and for judgments on account of warrants. It is thus seen that, within two years after a clean-cut scheme of finance was entered upon, whereby money was only to be borrowed for periods of thirty years, and a surplus was to be maintained for its payment, the city's warrants (checks upon an empty treasury) were being hawked about the streets or receiving the treasury recognition became deferred interest-bearing checks. During the ensuing years to 1860 "temporary" loans, so called, were made two or three times a year. On September 25, 1860, the councils resolved that the treasurer should indorse on all warrants for whose payment there should not be sufficient money in the treasury the following words: "This warrant will bear interest," etc. In the same year the matter of interest-bearing warrants found more formal expression in an ordinance of councils. The treasurer was authorized "to indorse for interest all warrants issued for the payment of which there should not be money in the treasury." From this on it was unnecessary for the councils of Philadelphia to make exact calculations to the end that appropriations might be confined to the amount of the tax levy. The departments had but to draw their warrants in accordance with the appropriations. These were stamped for interest and sold in Third street. The struggle in councils came to be, as one of the members put it, to get the highest appropriations and the lowest tax levy. The greatest confusion ensued. In December, 1864, a special committee on the highway department reported that "the city has been defrauded to a great extent by the loose manner in which business has been conducted in this department. * * * There is no one to keep an account of the labor performed and the materials furnished." At this period numbers of the leading men of business who still remained in councils resigned. Unable to check the profligacy and corruption growing out of the loose credit system, and without the discernment to suggest far-reaching remedies, they were unwilling to longer seem responsible for the evils being wrought. On May 12, 1865, the councils passed the following:

Whereas, It has been a common practice for many of the departments to exceed their appropriations and to apply to councils to make appropriations to pay for deficiencies; therefore be it

Resolved, That no appropriations of money shall be made to pay any bills contracted for in excess of appropriations made for that purpose.

In the same year the finance committee of the councils had under consideration a resolution "requesting the legislature to limit the debt of the city of Philadelphia." To be sure, the majority of the committee reported that they failed to see the necessity of recommending the passage of such a measure, having for its object the limiting of the powers of the city in the management of their municipal affairs. It was pointed out that the financial difficulties of the city were "only temporary and were caused by the refusal of the minority (*sic*) of councils for two years past to permit a greater rate of tax than 2 per cent." A loan to meet deficiencies of $2,500,000 was then under consideration. The minority dissenting showed that in eleven months the debt had been increased by $12,850,000. The collection of taxes at this time was frightfully in arrears.

OCCASIONAL NOTES.

The results of the Louisville Exposition must be regarded as satisfactory, not so much in a financial way as when regard is had to the impetus which it has communicated to the general commercial movement of the surrounding section. The total amount of capital paid in was less than $246,000. The plant cost about $315,000, leaving a debt unprovided for at the opening of the exposition, which, however, has since been almost wholly paid. The running expenses of the exhibition were about $160,000 for the one hundred days, and the receipts were about $225,000, showing a profit of about $65,000 over running expenses. The clearings of the Louisville banks for the three months of August, September and October, which cover the period of the holding of the exhibition, show an increase of about 15 per cent over last year. The railroad earnings for the same time also show a large increase over the corresponding period of last year, much of which is attributed to the exposition as a procuring cause. The general outcome is considered so encouraging that it is now proposed to utilize the buildings by holding another exposition next year. The directors of the exposition have, with this object in view, issued a call to the citizens for subscriptions, in which they declare their conviction that an exposition can be held next year as creditable in point of exhibit and as financially successful as the one recently closed. The Louisville *Courier-Journal* strongly recommends the holding of another exposition, declaring that the representatives of Louisville can work with, not against, the energetic managers at New Orleans, and that the two expositions may be made to exhibit in a striking manner the resources of the south.

The United States government has had printed a chart of postal statistics covering the period since the organization of the government in 1789. Like all documents which afford an opportunity for comparison between the early beginnings of the institutions of the country and their present expansion, the chart presents a striking view of the immense development which has been going on in the intervening time. In 1790 there were only 75 post offices in the United States; in 1882 there were 46,231. The extent of post routes has grown from 1,875 miles in 1790 to 343,618 miles in 1882. The revenues of the department have grown from $37,935 in 1790 to $41,883,005 in 1882, and the expenditures have increased from $32,140 in 1790 to 40,482,021 in 1882. The total salaries paid to postmasters have increased during the same period from $8,198 to 10,134,091, and the amount paid for transportation of the mails has grown from $22,081 to $22,846,112. A most remarkable increase is noted in the employment of domestic money orders. The amount of these issued in 1865 was $1,360,122; in 1882 the total issue amounted to $113,400,118.

The *Pall Mall Gazette* has recently printed some "Impressions of America," by Mr. Thomas Bart, M. P., who has been observing the condition of the people in the United States, especially in the mining districts. He recognizes that almost everywhere a high value is set upon the education of the young. He found in one of the districts a high school, the majority of the pupils attending which were the children of miners and workpeople, a condition of things, he says, the like of which is not to be found in any mining district in England At one town in Illinois he visited an agricultural and industrial college, in the neighborhood of which he

saw a combination of labor and culture such as he had seen nowhere else. He found in particular that education had not caused its recipients to despise labor. The contrast, however, between the care exhibited for the training of the young and the want of provision for adult education was, he thought, very marked, and it impressed him unfavorably. He found that the miners took life very seriously, but he did not see much drunkenness. His conclusion is that, regard being had to the long hours of labor and the high price of house rent in the United States and the general lack of facilities for the education and recreation of workmen, the condition of that class in the United States is not much superior to that of the same class in England, though he admitted that the general inference would be fairly correct if the money wages received were alone considered. He thought that America, however, offered a better future to the workman than England in that here opportunities are afforded to him of working out his independence by becoming his own employer.

Representatives of the English and Spanish governments have signed a protocol in which those powers engage at once to open negotiations for a treaty of commerce which is to include a consular convention and a treaty of navigation, and is to be concluded with the least possible delay. According to the published terms of the protocol the Spanish government agrees to make, within the limits compatible with its financial requirements, and with due regard to the present state of Spanish industry, such modifications in their present tariff as after careful investigation shall be found necessary to meet the legitimate requirements of British trade, the British government on its part engaging to apply to Parliament for sanction to modify the present alcoholic scale of the British tariff so as to meet the requirements of Spanish trade. The protocol provides for the appointment of a mixed commission which is to thoroughly investigate values and all the other conditions which go to make up prices, and also to take cognizance of any hindrances which militate against the free movement of trade and commerce. The commission will hear interested parties, Spanish or British. The governments have agreed upon certain arrangements involving a lowering of their respective tariff schedules, which are to continue in force until the definitive treaty of commerce shall take effect, with liberty, however, should unforeseen circumstances interrupt the negotiations, of termination in 1887. In the meantime the respective governments agree to accord to each other most-favored-nation terms in regard to all matters appertaining to trade and navigation.

The movement in favor of freer trade relations appears to be strongly supported in Spain. Meetings have been lately held at which the necessity of concluding commercial treaties with the United States and England has been strongly urged. Resolutions have been passed congratulating the Madrid government on its course, and calling upon it to push actively the negotiations with those countries and with Portugal. Steps have been taken towards promoting a free-trade agitation in the principal ports and in the agricultural and wine-growing districts. Banquets are being organized in honor of the leaders who have signalized themselves by their efforts in behalf of reform. The press is, to a great extent, in favor of the commercial treaties. Altogether, the prospects for the early conclusion of a definite commercial treaty with England and perhaps of similar treaties with other countries seem to be favorable.

According to the general report on the English census of 1881 which has just been issued, the aggregate population of England and Wales in that year was 25,974,439. The rate of increase during the decade ending in 1881 was 14.36 per cent., a higher rate than in any decade since 1831–41. The population of London is put by the report at 3,816,483, exceeding the populations of the nineteen largest cities of England (excluding London), taken together. The rate of increase in the population of London has been higher than that of the other large cities or of the country as a whole, being 17.3 per cent, The total number of males returned as engaged in some definite occupation was 7,783,646, or 71.5 per cent. of all the enumerated males of five years of age and upwards. The total number of females so employed was 3,403,918, or only 29.4 per cent. of enumerated females above the age indicated. It appears from an epitome of the history of census taking in England with which the report opens, that the first proposal to have a systematic census of the population was made in 1753, when a bill on the subject was introduced in the House of Commons. The bill was passed by the House of Commons by large majorities, but it was opposed by the House of Lords, then as now, an obstructionist body. No further action appears to have been taken to obtain a census until 1800, when the Population bill was introduced, which passed through Parliament without opposition. The first census was taken in 1801 and a census has been taken in the first year of each succeeding decade since that time. The present comprehensive census system was not however introduced until 1845.

SPECIAL CORRESPONDENCE.

PROSPECTS OF TARIFF AND FINANCE LEGISLATION.

Washington, December 26.—With the announcement of the committees by the Speaker of the House Congress has been provided with its legislative machinery, and it is possible now to form an approximate opinion of the tendencies which the parties in the two houses will endeavor to give to legislation. Estimates based upon the composition of committees are always to be taken with qualifications, as the committees do not control the two houses as they did in the days of the war. But the committees are a very certain index to the intentions of those who nominally control legislation, and they no longer leave any doubt upon this subject. There is now a certainty as to the intention with respect to the tariff; there is less clearness in the matter of probable national bank legislation. Whatever Mr. Carlisle may have meant by his inaugural speech as Speaker, when, in popular phrase, he "placed himself on Randall's platform," he has framed his committees in strict accordance with his own original policy. The effect of this action, possibly, may be stated in this sentence: There will be tariff agitation, but there will be no tariff legislation.

The Ways and Means Committee, judged by the majority of its units, is radically in favor of very important modifications of the tariff. Morrison, the chairman, has unequivocally announced it to be his purpose to report, at the earliest possible moment, a bill which will disregard the revision of last year and propose a complete system of legislation upon this subject. The nature of Mr. Morrison's plan, so far as it has been outlined, is substantially the same as that which he advocated when chairman of the Ways and Means Committee in a former Congress. He favors the plan of a horizontal reduction of the whole list of from 15 to 20 per cent., and a very material increase of the free list. It is believed that war will, undoubtedly, be made upon whole lines of manufactured goods. The New England protected interests are likely to be much more sharply assailed than they were in the discussion upon the bill of the Tariff Commission. All economic movements in Congress are almost necessarily political in their character. This will be especially true of the agitation of the tariff question this winter. It will be the first decided move in the game of presidential politics for 1884. The Carlisle-Morrison wing of the Democratic party has decided to make an aggressive stand upon the tariff question, and to cut loose from the tariff protectionists of the eastern states. The theory of this policy is that the Democrats must have an issue, and that the tariff is the natural issue; that the Democracy has little to hope from the protection wing of its party in Pennsylvania or New England; that it must select a line of new departure, and that, while on the subject of radical tariff legislation it may expect to lose votes in Pennsylvania and, perhaps, not gain any in Ohio, it has more reasonable prospects of success in the more strictly agricultural states of Wisconsin and Illinois, where protection is less strong. This, unquestionably, is the Carlisle-Morrison tariff programme. Mr. Morrison avows it. It remains to be seen whether the Democrats, as a whole, can be made to indorse this policy when the Morrison bill shall be reported from committee. The presidential question is intimately connected with the business side of this problem. It is very possible that rivals for the presidential nomination in the Democratic party, or the friends of the rivals of Mr. Morrison, in view of the fact that no legislation is probable, will not enter into a scheme which has so evident a personal and political purpose. As a practical fact, of course, with the two houses so sharply divided politically, and the administration in harmony with the dominant party in the Senate, no bill of the nature which will be reported by the Ways and Means Committee can become a law. Complicated with personal ambition, as the question is, it is by no means certain that Mr. Morrison's committee can report a bill which will even pass the House. Mr. Morrison himself has admitted, since the committees were announced, that there are enough protection Democrats in the House to defeat the passage of any bill through that body, if they shall choose to unite with the Republicans. This is a very serious and important admission.

There is another element in the tariff question which is likely to give the Democratic party in the House much concern. It is not the Democratic programme to make any very radical reductions in the duties on sugar. There is a large Democratic protection vote, and Louisiana is "solid" for sugar. It is reported that the Louisiana Democrats have been notified that "sugar is not to be hurt." The Republicans, on the contrary, have very decided views on the propriety of large reductions of the sugar duties. The proposition to abolish the duty on sugar altogether, and to couple with it a bounty for American producers, is strongly advocated by many Republicans, particularly by those who are most interested in a protective tariff. The Republican protected sections derive comparatively little benefit from the duty on sugar. If the duty on sugar should be abolished, the question of further material reduction, either of internal revenue or of the tariff, would no longer be a practical one, for, much as is said about the surplus, the United States Treasury, with the duties on sugar abolished, and the revenue from existing tariff legislation still an uncertain quantity, would have no considerable surplus. If the Republicans as a party shall decide upon the policy of solving the problem of surplus revenue by abolishing the sugar duties, and providing for a bounty to producers of American sugar, the tariff question would take on a new aspect. From a canvass which has already been partially made it is learned that the representatives of the Louisiana sugar interests would, for the most part, consent to the plan to give a bounty to the sugar producers. An annual bounty from the government for an average crop would, some of them maintain, be a much more certain source of income than a crop subject to so many hazards as is the sugar crop of Louisiana. If the Republicans should agree to this policy it would, unquestionably, be supported by most of the protection Democrats, notably those of Louisiana, Pennsylvania, New England and Ohio. And a combination based upon such an alliance may pass a bill through both houses. The protection Democrats are very much displeased with the tariff intentions of the dominant party in the House, and it is not to be forgotten that some of these congressmen are protectionists first and Democrats afterwards.

It is, of course, unnecessary to say that the Pennsylvania Democrats are very much alarmed at the Carlisle-Morrison policy, which they declare is a threat to the "business interests." The Ohio Democrats are alarmed also at the policy which has been pursued by the Speaker with respect to that state on the Ways and Means Committee. Frank Hurd, the only man who refused to stand upon the Ohio Democratic tariff platform, and who defined the Democratic policy as to the wool tariff, is made the Ohio representative on the Ways and Means Committee. He, of course, does not represent the Ohio Democracy on the tariff, for the Ohio Democracy as a whole is a protective party, and its leader is Mr. Converse, who has already introduced in the House a bill to restore the wool tariff to the old rates of 1867.

It will be seen, therefore, notwithstanding the fact that a very strong majority of the Ways and Means Committee favor revenue reform, meaning by it a decided scaling down of the tariff rates, that the tariff question is still very much involved with complicated political questions. It is safe to say that a bill framed upon the Carlisle-Morrison theory will not become a law. It would not be as safe to say that the Republican policy of abolishing the sugar duties might not prevail. "Free sugar" would be a strong campaign cry. There are many free-trade Democrats who, should the issue be skilfully and sharply drawn, would scarcely venture to vote against free sugar. And if the Republicans shall determine upon this policy the issue will be sharply drawn, for the tariff discussion ultimately will pass beyond the control of the Ways and Means Committee, as the tariff bill must be considered in committee of the whole, and in committee of the whole Mr. Carlisle is not speaker, neither is Mr. Morrison the chairman, and the previous question does not prevail.

The question as to the banks is clearer but not more hopeful. There have appeared in the daily press various suggestions as to probable legislation on national banks based upon the complexion of the House Banking and Currency Committee. These suggestions are misleading, and are formed upon misinformation. The House Committee on Banking and Currency has no jurisdiction of the subject of the bank tax. The tax on banks is an exclusively fiscal measure, of which, under the rules of the House, the Ways and Means Committee has sole jurisdiction, and it is the views of the Ways and Means Committee which are to be considered with reference to this subject and not those of the Banking and Currency Committee. The title of the committee is misleading on this subject. The majority of the Ways and Means Committee is hostile to the national banking system. It is certain that the committee would not favor the issuing of a new low-rate long-time bond. From such information as to the special views of the different members as is possible, it is also pretty certain that they will not favor the Knox and Sherman plan of authorizing the banks to take out circulation to the amount of within 10 per cent. of the market value of the security bonds. Republican members of the Senate Finance Committee say that they understand that the Democratic ultimatum will be to authorize an increase of 10 per cent. in the amount of circulation or up to the present par of the bonds.

AGRICULTURAL AFFAIRS IN GREAT BRITAIN.

London, December 11.—Never was there a greater contrast than that between the agricultural outlook of to-day in England and the outlook at this time last year as far as preparations for future crops are concerned. Last year a wet and tediously-prolonged harvest was succeeded by a wet autumn, and the prospects of arable-land farmers were as black as black could be. Very little stubble cultivation had been done to any advantage, and the land was, therefore, full of weeds; the heavy root crops had come off the land badly, leaving it terribly cut and stamped about by carting; scarcely any wheat had been sown, and very little land had been plowed up for the winter. This year, after a fine harvest in the early districts and a protracted one in the north, we enjoyed one of the finest and most genial autumns on record, and wintry weather did not set in till the 6th inst. Stubble cultivation was carried on under favorable conditions; roots came off the land well; wheat-sowing is pushed and nearly all the wheat is up, thick and strong, and plowing is remarkably forward. In Scotland the contrast is not so striking; but it is still remarkable. Our grain growers, then, have a fine start for another harvest. Now a good start counts for a great deal; but in such an uncertain climate as ours the the brightest hopes are often blasted, while the blackest fears sometimes turn out to have been groundless. Last year, for instance, a small acreage of wheat was put in somehow, and grew into a crop deficient in yield, indeed, but no more so than we have had several times lately after a fine seedtime. As for barley, oats and other spring-sown crops, just in the nick of time, following a wet and mild winter, there came a short period of sharp frost, after which the land, previously like mud, worked like a garden. The following season was fairly favorable, and the consequence was a generally good yield from all crops but wheat. The converse may occur next year, and therefore we must not make too much of the present outlook. We have a splendid start, however, and we need not take trouble by the forelock.

Markets have been almost lifeless lately, and farmers are much concerned at the low prices of wheat and barley. Oats, peas and beans have been selling moderately well. A large proportion of the wheat fit to thresh has been marketed, and most of the remainder is either too damp to thresh, or is in the hands of the comparatively few farmers who can afford to hold it in hope of better prices next spring or summer. The "pride of the stackyard" has sadly fallen since our long period of agricultural depression set in. In the good old times farmers were ashamed to see an empty or a nearly-empty stackyard at Christmas, and many made it a practice to hold over a stack or two of old wheat to sell after harvest. This practice has fallen greatly into misuse, not only because of the prevailing neediness of farmers, but also because the holding of wheat has for a long time been usually a losing game. There is always a loss of bulk through evaporation and the ravages of rats and mice, and it seldom happens that an increased price makes up for the loss. Threshing out of the field in harvest is much more common than it used to be, and it is now the rule to sell three-fourths of the wheat and barley before Christmas. If anything could induce farmers to hold their grain, present and recent prices would. Since the first week in September the highest weekly average prices have been—for wheat 41s. 9d., and for barley 35s. per quarter; and last week wheat was down to 40s. and barley to 32s. 3d. Such prices are not remunerative to British farmers under existing conditions as to rent and

other expenses. It is in vain that elaborate statistics are published to show that the wheat crop of the world is less than a year's consumption. Our merchants have so often bitten their fingers in wheat speculation, and our millers have so long pursued the hand-to-mouth policy with impunity, that they are entirely uninfluenced by such estimates. It is enough for them that the foreign supply is abundant, while there is a large visible supply in the United States, the Australian crop is beyond average, and it is reported that large stocks of wheat exist in north Russia ready to be sent here as soon as navigation is open. Reports from India, too, indicate that the expected failure of the wheat crop will not be so serious as was expected. The supply of flour has been very large and prices have declined. It must be a little puzzling to the uninitiated to see the prices which our leading corn-trade papers, to save their consciences, quote as the "London top-price nominal." With town-made whites at 35s. per 280 pounds, such a price as 40s. is a very "nominal" top-price indeed. If made at all, it is only on a very small quantity of very choice flour sold to fancy bakers. The fact is that the London millers form a compact little ring to keep up this fictitious top-price of flour, which they alter by agreement when they please. They are brisk enough to raise the quotation when they have any excuse for doing so; but they will not lower it at an inconvenient time, such as the period when a contract with the government or any other public body is about to be renewed, as contracts are based on their nominal top-price, though never up to it. Markets are not likely to improve in tone till after the end of this year; but it will be against all conformity with reasonable expectations as to future supplies of wheat and flour if prices get lower than they are to-day.

A paper on "Roller Milling Machinery," read by Mr. J. Harrison Carter at a meeting of the Society of Engineers last week, is attracting attention among millers here, though, of course, our leading millers are well acquainted with the details of the subject. Mr. Carter truly stated that the roller milling system is superseding the millstone system and revolutionizing the milling industry of this and other countries. The importance of a change improving the manufacture of flour he illustrated by estimating the flour consumption of the United Kingdom at 36,000,000 sacks of 280 pounds, which, at 33s. per sack, amounts in value to £59,000,000. Mr. Carter also referred to the fact that foreigners are gaining ground on British millers in the improved manufacture referred to. By means of diagrams he clearly showed the advantages of the new system over the old one. The rapid introduction of roller mills in the United States since 1880 and the general disuse of stones in several European countries were facts cited by the lecturer in support of his views. A discussion ensued, in the course of which two or three millers stood up for the millstone system. One of them said that American corn-trade papers were declaring that the stone gave better flour and produced it more cheaply than the roller. On the other hand, a miller from the Midlands affirmed that stone milling was being overwhelmed by roller milling, and stated it as a fact within his experience that 900 sacks of flour were produced on the roller system with the same steam power which produced only 550 sacks on the stone system.

The returns as to the importation of cattle and fresh beef for the periods named are interesting:

Farmers here are pleased to see the progress of the dead-meat traffic, and they carefully watch the conflict between those interested in it and the friends of the live-cattle trade in the United States. If the transit of dead meat proves more economical in the internal trade of a great producing country, the argument is that it will in the end win in the export trade. The mischief is that we spoil the meat after we get it, as we have not made anything approaching to adequate provision for storing it safely and sending it inland. We have no refrigerating stores, except at two or three ports, and we have no refrigerating rail vans. Of course, if we relied on the dead-meat trade we should be furnished with all the necessary stores and appliances for it as are in use so generally in the United States.

Stock-owners here—and nearly all farmers are stock-owners—are becoming very impatient with the existing cattle-disease regulations, which combine inefficiency and inconvenience to a marvelous degree. Foot-and-mouth disease is again extending in England, Scotland and Ireland, after having partially subsided a few weeks back, and the losses already suffered from it are enormous. Never, since the repeal of the Corn Laws, have our farmers been so nearly unanimous as they are upon this question. They are clamoring for the closing of our ports against live animals from all countries in which foot-and-mouth disease exists. This demand, if granted, would leave the United States, Canada and Denmark free to send us live cattle for slaughter, shutting out all other extensively exporting countries. The government and the Liberal party generally are against the demand, fearing to offend voters in the towns. The Conservatives, on the other hand, support the demand, though it is doubtful if they would grant it if they were in power. All the same, it is very reasonable, as our losses are far greater than our gains from importing from diseased countries.

Our fat-stock shows have been greatly deteriorated by the prevalence of foot-and-mouth disease and the harassing and ineffective regulations for checking it. At the Birmingham show, held last week, the number of cattle was scarcely two-thirds of the average number, and the entry of sheep was smaller than usual. Quality was fairly up to the mark, considering the small entry, while in the pig classes, which were well filled, there was nothing to complain of. The great show of the season, that of the Smithfield Club, opened yesterday at the Agricultural Hall, London. There is a better entry than most people expected to see under the circumstances. In consequence of the prevalence of disease, no animals were allowed to be sent to the show if they had been exhibited anywhere else within a month. This rule shut out all the animals exhibited at Norwich, Birmingham, and two or three other shows of smaller importance. Notwithstanding this, there are 213 cattle, 191 sheep and 79 pigs; against 248 cattle, 187 sheep and 84 pigs at last year's show. The quality of the animals as a whole is quite up to average, some of the cattle classes, and the sheep and pigs as a whole, being as good as I have ever seen them. In the cattle classes the most remarkable feature is the general excellence of the Herefords, which, class for class, certainly beat the shorthorns by long odds. Another remarkable feature of the show is the great success of Her Majesty, the Queen, who carries off several prizes in the various classes, the breed cup for the best shorthorn, the two silver cups given respectively for the best ox or steer and the best cow or heifer, and the hundred guinea champion plate given for the best beast in the show.

The history of this victory is a little curious. The champion prize is taken with a shorthorn heifer, two years eight months seventeen days old, and a remarkably handsome and well-furnished animal for her age. This is not the point I wish to notice, as there is nothing curious about that. What is somewhat uncommon, however, is the winning of the silver cup for the best ox or steer in the show by an animal beaten in a contest for the breed cup. Such an accident is always liable to happen, and the explanation is very simple. It was a question of sex. For the cup offered for the best Hereford in the show the Queen's steer, a nearly perfect animal except for a black nose, was beaten by a splendid heifer shown by Mr. Thomas Myddleton, of Beckjay, Shropshire, to be beaten in her turn by the Queen's shorthorn heifer. Thus it happened that the second-best Hereford carried off a more valuable prize than the best Hereford, which is rather hard on Mr. Myddleton. If he could have changed his heifer into a steer he would have carried off the £50 silver cup won by Her Majesty. But this is not the whole of the story of the Queen's good luck, for her Hereford, in the opinion of the judges of the breed, was again beaten by a younger steer shown by Mr. Price, of Pembridge, Herefordshire, which took the reserve ticket in competition for the breed cup. Thus the judges of the champion competition reversed the decision of the judges of Hereford. The Devons, as a whole, were not quite up to their usual show form, and the Sussex have been better represented. Highlanders, always the most picturesque animals in the show, and polled Scots are both in strong force, and a generally level standard of rather high merit is the remark that best applies to them. There are no such wonders among the Scotch polls as have sometimes appeared at the Smithfield Club Show. There are some particularly good Welsh cattle and some pretty good red polled Nortolks and Suffolks. The other cattle classes do not call for much remark, as the cross-breds are not so good as I have seen them on some previous occasions. There is an excellent show of sheep, the Southdowns especially being a wonderful lot. Shropshires are also very well shown, and there are some remarkably good Hampshire Down lambs. Some very fine specimens of the Romney Marsh (Kent) breed of sheep are in the hall. The show of pigs is good on the whole, but not evenly so. The Berkshires and the black breeds are the best.

Great interest has been excited in this country by the election of a free-trader as speaker in the United States House of Representatives; but people are not very sanguine as to results such as most of them desire, at least as far as the near future is concerned. Some of our free-trade enthusiasts tell us that it will be an evil day for the United Kingdom when America becomes a free-trade country; but our manufacturers do not see it, though our ship-owners possibly may fear the loss of their monopoly of transatlantic trade in the event under consideration.

As it is not known how soon we may have a general election in this country, candidates are being brought forward in various constituencies by way of introducing them to the electors in good time. The Farmers' Alliance is making efforts through its branches to secure the better representation of farmers in Parliament, and it is expected that several farmers' candidates will be put forward in county constituencies. The Agricultural Holdings act, passed last session, is regarded as far from satisfactory, and yet a large proportion of the sitting members for counties voted for various amendments intended to make the measure even weaker than it is. These are marked men, and it is expected that several of them will be turned out at the next election. The Farmers' Alliance has published and widely circulated a list of the principal divisions in the House of Commons on the amendments above referred to, so that every farmer may see how his nominal representatives voted. The act is not likely to be much more effectual in protecting the capital of tenant-farmers invested in improvements than the abortive act of 1875 was. The new act is to come into operation on the 1st of January next, and already a large number of tenants have been induced to sign agreements nominally affording them what the act terms "fair and reasonable compensation" for any improvement they may carry out, but not really doing anything of the kind. Tenants are very much in the power of the landlords, even after the recent extreme depression, which has rendered so many farms vacant. A large proportion are in debt to their landlords, and others are afraid to risk a change of farms. The consequence is that they sign away the few benefits which the act would afford them when they are requested or rather ordered to do so. To be effectual the act should have been made compulsory in all its provisions, whereas almost all the provisions can be set aside by agreement. The mischief of it all, as far as the public are concerned, is that our agriculture is likely to continue in a languishing state because there is no security for the capital invested in it, and therefore no attraction for the additional capital so sadly needed to restore the lost fertility of the soil.

AFFAIRS AT BERLIN.

Berlin, December 10.—The discussion of the budget in the Prussian Assembly within the last few days, when the House came to the budget of the Minister for Agriculture, showing a gross income from the crown domains and forests of 81,624,040 marks ($20,406,010), gives a very good idea of what we have to think of the socialism of the government and its adherents. Government, at the instigation of the Liberals in the House, had during the last few years begun to sell a limited number of domains in lots to small farmers. In the budget for 1884-'85 the area destined for sale had been considerably reduced, and the Minister for Agriculture, at the interpellation of a distinguished member concerning this reduction, said that he was not an adherent of the theory for selling these valuable domains as they brought government a good income. Besides, he added, by selling the domains not much good could be done, for if the total area of these crown lands of 340,000 hectares were sold in lots of about five hectares each at the most 70,000 families would become landed proprietors—a mere bagatelle. This declaration of government was met by applause from the Conservatives. But this same government and its approvers continually proclaim themselves to be friends of the lower classes and especially of the small farmers. Now, however, when the number of small landed proprietors is to be gradually increased by crown estates without any loss, as every lot is sold for ready money, the theory of government socialism comes to a sudden end, and they retire with a shrug of their shoulders, because the whole proceeding would only aid 70,000 families. That such an example set by the crown in its quality as a large land-owner might gradually induce private proprietors to sell small lots of their large estates to little farmers either for propriety's sake or for other reasons, this is what the gentlemen of the right side of the House will not listen to. Perhaps they only so warmly applauded the minister's declaration to avoid the conclusion easily drawn from the sale of public domains in favor of a division of great private estates enjoying so many privileges.

The same friends of the lower classes brought us the duties upon corn, meat and petroleum, and are not yet satisfied. The matadores of the conservatives, the agrarians, go in for doubling the duties on corn, which in the two years of 1880 and 1881 yielded 31,500,000 marks ($7,875,000), and in 1882 about 17,000,000 marks ($4,250,000), all, as they say, for the benefit of the small farmers. The same minister, when speaking of the land tax, said that the small farmers often consume all their produce themselves—an indisputable fact not contradicted by the Conservatives. How does this agree with the assertion that the corn duty is for the benefit of the small farmer? He has nothing to sell. No, it is exclusively the great land-owners who profit by the duty, and their representatives speak up for the plans of government socialism, only as long, it is true, as they are left free from any additional burden. When, however, the Liberals require the abolition of the salt tax, the amount of which, 23,000,000 marks ($5,750,000), might easily be replaced by raising the tax upon the extensive spirit distilleries on large estates in the country and by diminishing the export premium for beet-sugar—the premium of 48,000,000 marks ($12,150,000) paid by government being considerably higher than the tax paid on beet-root, then the Conservatives, composed principally of great land-owners and other privileged classes, make the most decided opposition. There is no other tax which, like the salt tax, is raised so regardless of the greater or smaller paying capability of the taxpayer, as the rich cannot consume more of it than the poor. What value therefore has their pretended sympathy for the poor man? The suspicion of the Liberals is that government by their socialist plans try much more to extend their influence and power—now even grown beyond measure—than to remedy evils, or improve the condition of the poorer classes. This suspicion is considerably increased by government's trying to carry out their so-called reforms in conjunction with the above described Conservatives.

From the discussion of the agricultural budget I will quote a few remarks concerning the United States. One member complaining about the great and heavy competition with the German farmer from abroad, asserted that a hundredweight of American wheat is imported into England at 6 marks 70 pfennige ($1.67½), but the honorable gentleman was soon corrected by a better instructed member. He was shown by a price-list that the cost of a hundredweight of American wheat in London is not $1.67½, but at least 8 marks 5 pfennige ($2.01), a price about corresponding to what is paid in our harbors for wheat, which yields a reasonable profit to the merchant. If American wheat really only cost 6 marks 70 pfennige in England, how could the merchants in our Baltic provinces pay 9 marks ($2.14) per cwt.—as they do—and still export to England—as they likewise do? A further complaint of this member that the freight per cwt. from New York to Liverpool was only 70 pfennige (17½ cents), whereas it was from Konigsberg to Liverpool 50 pfennige (12½ cents), was answered that a ship would be sure in Liverpool to find return cargo to New York, but not to Konigsberg. And this was the consequence of our new economical policy. Our ships always used to find a return cargo of coals or machines, but that ceased at the inauguration of the protectionist policy. Another remark of the same member that we need not import for 100,000,000 marks ($25,000,000) corn from abroad if we cultivate our ground more thoroughly, received the answer that population grows more rapidly than any possible increase of agriculture, one could therefore never do without importation, and rational political economy would always have to take into account this unavoidable fact. Another distinguished member called attention to the circumstance that we are being surpassed by the Americans in the cultivation of fruit, and he advised the Minister for Agriculture to send an experienced fruit-grower to the United States on purpose to study the cultivation of fruit and the making of preserves; the beneficial results would soon become apparent.

At the exchange the great event of last week was the already-mentioned Russian 6 per cent. loan of 50,000,000 gold roubles—82,000,000 paper roubles—at 98. Nothing shows more clearly how much the confidence of the European financial world in the stability of the Czar's empire has been shaken than the fact that neither in England nor on the continent was there a bank found to undertake a thoroughgoing responsibility in connection with the loan, notwithstanding the tempting conditions offered. The respected banking firm, Mendelssohn & Co., here has only offered to accept subscriptions for the Russian government, therefore without risk of their own. We must wait for the confirmation of the report spread from St. Petersburg that the sums subscribed represent a manifold value of the loan. It is not impossible that such a thing should have happened, considering the great number of people who care more for high interest than for continuous security and the ensuing firmness, though even those people might have easily found out that some of the prior Russian loans also yield nearly 6 per cent. in consequence of their low price, having besides the advantage of being gradually repaid at par, an advantage of which the new loan is entirely void. In the ukase concerning the new loan not a word is said about repayment by buying in shares. According to the ukase the new loan is to be spent in repaying the advances made by the Imperial Bank of St. Petersburg. But as it is not expressly said that of the Russian notes deposited in the Imperial Bank, an amount equal to the loan repaid is to be cancelled, there are doubts as to whether it will be done altogether; for in past years after similar repayments to the National Bank it was not done either. The fluctuations—among the greatest drawbacks in commerce with Russia—were in no way obviated by the new loan, so that the Russian paper rouble, after a one or two days' rise, fell again. But for this movement, created by the new Russian loan, the Stock Exchange was not very animated; a certain reserve was noticeable in all branches, which prevented stocks from rising or falling. This reserve was not a little increased by some new unexpected stoppages of payment of well-known warehouses, most of them in the ready-made mantle branch.

A comparison of the official statistics of exportations from the German Empire for October this year with those of the same time last year is anything but depressing. We see, for instance, Germany exported:

OCTOBER.	——Metrical cwt.——	
	1883.	1882.
Raw iron	217,132	132,449
Scrap iron	92,807	73,344
Rod iron	136,516	131,257
Iron ore	1,711,848	1,488,383
Locomotives	11,754	3,325
Engines	66,772	64,474
Coal	8,391,438	7,731,027
Raw zinc	55,023	32,522
Rolled zinc	14,505	11,156

A comparison of the above mentioned exportations during the first ten months of this with those of the same period last year shows still more favorable results. A strong decrease of the iron exportation during the month of October is only observed for iron wire, the figures being for last October 146,672, and in October, 1882, 203,502 metrical cwt. Manufactured goods, too, exhibit a pretty satisfactory export when compared with that of October last year. But there is a fear—perhaps a well-founded one—that the exports for November and December will be less favorable. Besides, it is supposed that the exported goods fetched lower prices than last year. It is said the increasing number of bankruptcies, a sign of overstrained credit, show how sales are pushed in every way. During the month of November 437 bankruptcies were declared in the German Empire, to 380 in October and 265 in September this year. In November, 1882, the number of failures was 351, therefore for this year a plus of 86, or 24 per cent. The greatest number of failures took place in Berlin, namely, 13; then comes Dresden with 10, Munich with 9, Hamburg 8, and Leipsic 6. There are no statistics as to the pecuniary amount of these failures, without which we can form no correct idea.

The state of the grain business remains pretty much unaltered in the greater part of Europe. In many parts of north Germany, and especially here in Berlin, the frost, which suddenly set in the middle of last week, threatening to close all water communication, increased the demand and, consequently, prices; but when the thaw began on Saturday demands and prices slackened. For all this, the week from 1st to 8th of this month wheat showed an advance of 3½c. per cwt. for December–January and about half as much for April–May and May–June. Rye even gained 6c. per cwt. for December–January and 4½c. for January–February; April–May, May–June and June–July showed an improvement of 2½c. Indian corn, which is in good request with our farmers, less for distilling than for food for cattle and horses, rose 1¾c. Oats are but little improved. Petroleum continues firm. Raw sugar again lost 5c. per cwt., and refined sugar was also a little cheaper. Coffees quieter in Hamburg. The business in Kentucky tobacco, and in general for all American tobaccos in barrels, was quieter in Bremen last week, but tobaccos for cigars, especially St. Felix, were more animated. Wool continues to meet with attention in Germany. Linen yarns are much sought after in Trautenau, as in Bielefeld, a principal manufacturing place for this article. Silk in upper Italy rose still higher in price on the report of the intended aid to be afforded to silk producers and merchants by a number of capitalists. American hides, dry-salted hides, neats hides and crop hides were scarce in the market, so that military purveyors could not complete their stores. In horse hides, Validia, of which the last Chili steamer brought an extraordinary large quantity, were sold in harbor in great quantities, though cheaper than before. L.

CHINA, JAPAN AND COREA.

San Francisco, December 18.—Latest advices from the Orient are far from favorable in a business point of view. The uncertainty regarding peace has quite unsettled values in China, and a depreciated currency is still playing the mischief in Japan, although paper money has appreciated in value of late through the persistent efforts of the Finance Minister to reduce its volume. Trade is dull in the Orient everywhere, and merchants complain of an unprofitable season.

The treaty of commerce between Corea and Japan has been published, and it gives great dissatisfaction to Japanese newspapers. Corean trade has developed very considerably of late years, and Japan cannot well afford to relinquish it. Contrasted with that between Japan and any Western nation, except perhaps England, the direct trade with Corea figures to great advantage, being larger in the aggregate annually than the combined trade of Japan with Germany, Russia, Italy and Holland. But there really does seem to be some ground of apprehension regarding the continuance of this trade. China has got the inside track. Its commercial treaty with the Chosen government provides for a uniform customs tariff of 5 per cent. on all frontier trade, and there is a doubt whether this provision does not also include sea-borne goods. In the latter case the Japanese merchants anticipate a total collapse of their Corean trade, unless they are saved by the "most favored nation" clause in their treaty. They rely upon the treaty which Sir Harry Parkes is negotiating with Corea for England to lift them out of their difficulty. "England," remarks the *Fiji Shinpo*, "is to Corea what an eagle is to a sparrow. If the former wants to have its own way with the latter, it will have it. England concluding a treaty with Corea will be the signal for the concession of the privileges to Japan which are provided for in the 42d article of the Trade Regulations."

The Japanese further complain of undue advantages enjoyed by Americans in Corea. Although America concluded a treaty with the Chosen government a year ago, no trading regulations have been adopted, and until that is done Americans trading in Corea are exempt from duty, according to the authority already quoted. Moreover, in the Japanese treaty American petroleum is only taxed 5 per cent. ad valorem, while English and German goods are taxed from 8 to 10 per cent. It should be noted that the bulk of exports from Japan to Corea is foreign goods. The principal imports to Corea consist of lawns and shirtings manufactured in Western countries. The Chinese have contracted with Manchester houses to mark their orders with their own trade-mark, such as "Gigen" or "Taian;" and the Coreans place such confidence in those goods that they have almost refrained from buying any other kind. Japanese traders used to buy these specified goods from Chinese and ship them to Corea, but now that the Chinese steamship company provides a tri-monthly service with Corea, backed by lower duties, the Coreans can do better by buying direct from Chinese merchants. American manufacturers might take a hint from the Chinese-Manchester arrangement.

The policy of the Mikado's government in its commercial treaty with Corea appears to be to lay down the general principle that Oriental nations are entitled to regulate their own tariff. Japan suffers greatly by reason of the 5 per cent. ad valorem arrangement forced upon it by England at the cannon's mouth, the value to be declared at the place of production and not when laid down at Yokohama; while it is powerless to revise its tariff without consent of the treaty powers, which consent the European nations withhold. This is an enlightened and magnanimous policy on the part of Japan, but Sir Harry Parkes will not pay the least attention to it when negotiating on behalf of England with the authorities at Seöul. He will play hawk to the Corean sparrow. There is one point in the Japanese-Corean treaty worth mention. Corea throws open its coasting trade to its insular neighbors until such time as it is rich and enterprising enough to have coasting vessels of its own.

Corea recently went in for silver coinage, over twenty thousand tarls' worth being struck off by hand press. The coins ranged from 15 to 60 cents in value, were of pure silver, said to come from the government mines. They were very rough and not milled, and had the inscription *Dai Chosen Koku* on the reverse side, the obverse having a small circle of blue enamel in the center. This gave the coin a very pretty appearance. The enameling was also done by hand. As these coins are being called in they are greatly sought after by numismatists. They will be replaced by a coin containing 10 per cent. copper alloy.

The *Japan Mail* characterizes the description in the Boston *Herald* regarding the exhibit of Japanese wares at the Boston Exhibition as being a clever work of fiction. It states that an attempt has been made to deceive Americans which, "if not fraudulent, is certainly calculated to promote fraud." "There is just one grain of fact among the *Herald's* assertions," it remarks, "the rest is pure fiction." The grain of truth is that the Japanese people regard the United States with the most friendly feelings. The government of Japan took no part, directly or indirectly, in the collection of specimens for the Boston Exhibition; nor was any avowed attempt made by any Japanese, whether official, amateur or tradesman, to send thither articles representing any period of Japanese art prior to 1883. "Everything contributed by Japan was either expressly manufactured for sale at the Exhibition, or selected from the recent outcome of the art workshops in the two capitals." The only official recognition of the Boston Exhibition was the granting of certain facilities to exporters, and the appointment of commissioners. The article states that "the famous Satsuma ware," which excited the Boston *Herald* reporter, "is a ware entirely unknown in Japan." Archaic decoration is only to be found on pieces of Satsuma expressly manufactured to deceive foreigners, and a competent expert had stated that the "historical collection" described in the *Herald* did not cover a period of more than five years. The fourteenth century boxes, the gold lacquer medicine boxes, "some of which are believed to be older than our era," the Tycoon's dress sword, the "famous Imperial sword," and the hand-wrought crystal ball, are one and all pronounced frauds, and the descriptive notice of them "impertinent clap-trap;" while the story about the Governor of the Castle of Osaka and the wonderful ivory carriages identified therewith, is pronounced a "baseless fabrication." Verily there is fraud and false pretence somewhere. The *Japan Mail* of November 17th is very explicit in its warning to visitors to the Boston Exhibition not to associate either the government or people of Japan with "these attempts to impose upon American collectors." BRADSTREET'S would do well, perhaps, to spread the warning, it being the declared enemy of all shams, frauds and false pretence.

Japan is making great efforts to establish a steam merchant navy. Five steamships, three wooden and two iron, were recently purchased in Japan at a cost of £82,000. They have a carrying capacity of 4,150 tons, and are now engaged in the coasting trade for passengers and cargo. In addition to these, Admiral Ito, assisted by two English nautical men, made contracts with eminent ship-builders on the Clyde and Tyne for sixteen steel and iron steamships, having a dead-weight carrying capacity of 22,540 tons. They are to be constructed upon the most approved principle, being built under Lloyd's special survey, and classed 100 A1. Their cost in Japan, with spare shaft and other gear and very full and complete specifications, will be £450,000, or somewhat under £20 ($100) a ton. Two of them will have a speed of thirteen knots when laden, and will each carry two large Krupp guns, magazines, etc. Two other vessels will have twelve-knot speed laden, the remaining vessels being ten-knot steamers guaranteed. There are to be three 700 and two 800-ton ships, the rest being from 1,150 tons up to 2,500 tons. Two of this new fleet are already in the Japan coast trade, another sailed from Glasgow October 23, and all will be at their destination by October, 1884. In addition to these twenty-one steamships belonging to it, the Kiyodo Unyu Kwaisha (Union Steam Navigation Company) has chartered three steamships from the government, making a total of twenty-four steamers of 28,065 tons burthen, eleven of which are now running on the coast of Japan. The charter of this company prohibits the acquisition of any but new steamers, but it was permitted to purchase twenty-two sailing vessels of 7,000 tons aggregate belonging to Japanese owners. The government subscribed $2,600,000 of the capital stock of the company, $3,400,000 being subscribed by over 5,000 merchants. This fine fleet should develop the coasting trade immensely.

Is it not surprising, however, that with all our advantages of skill, coal and iron, American shipbuilders were not invited to tender for these ships? Iron works are being shut down and wages reduced because there is no demand, while every one might be fully employed if we did not erect a legal barrier against the business enterprise of the world. Japan has abundance of coal and iron, is not wanting in skill, and yet it went to Great Britain to buy its merchant shipping. Japanese are better informed upon the laws governing economic industries apparently than Americans.

THE NEW ORLEANS FRUIT TRADE.

New Orleans, December 21.—It is not boasting but stating a simple fact to say that New Orleans offers greater inducements to fruit buyers than any city in the United States. It affords an opportunity to lay freights down at a much less price than from any other point, because of the speedy and ample rail communications, and the additional advantage of a river united to all portions of the great west, whereby a check is kept upon excessive freight charges. With so perishable a cargo as fruit of any kind speed in delivery is of the utmost importance. The time from Havana, whence a large portion of our fruit comes, is less than three days; from Balize, another good market, two days and a half. Therefore, in one week from the period it is gathered from the plant or tree, the fruit may be placed in the Chicago or St. Louis markets. Each succeeding year increases the speed in the delivery of cargoes, because of new railroads and steamship lines centering here. For the fruit importation trade alone there are now seven different lines of vessels bringing tropical fruits of all kinds. Three of these are steamship lines making a trip in from twelve to fifteen days, the cargoes consisting of bananas, plantains, cocoanuts, pineapples and oranges in season. Prices range for bananas from $1 to $2 per bunch, and cocoanuts from $30 to $50 per 1,000. Pineapples from $1.50 to $2.50 per dozen when in good shipping order. Besides the above important varieties large numbers of guavas, mamee apples, alligator pears and sappodillas are received. This class of fruit imports is constantly on the increase since the introduction of the refrigerator cars, making a surety of their arriving in perfect condition. Our fruit trade may be divided into three distinct branches; 1. Oranges and lemons from Sicily; 2. Bananas, plantains, cocoanuts, etc., from the Bay Islands: 3. Our own home crop of domestic fruits. Bay Islands and Central American fruits, especially bananas and plantains, are considered the best in the world. It is generally well grown and thoroughly ripe and always commands ready sale at renumerative figures. The development of our European trade has been enormous during the past year, over 360,000 boxes of Sicilian lemons and oranges arriving by the different steamers. The railroad receipts swell this number to a much larger amount. The receipts of grapes and Spanish fruits from Malaga and Atheria were considerably above those of former years. Large portions of the oranges and lemons received here are consigned to western and Texas buyers, or shipped to them on their orders by brokers, or consigned on speculation by local buyers. The packing of fruit is acknowledged to be as much of an art as raising it from the seed. More losses occur yearly from false and bad packing than from any other cause. No matter how good the fruit, a careless, inexperienced packer will certainly ruin the contents of the package owing to its being violently jostled in transit. This art can only be learned from long experience by those who make it a business. The boxes or barrels used should be of the best material, and arranged with a proper amount of ventilation. The greatest loss is in European consignments. This fault might easily be remedied by a selection of steamers better adapted to the carrying of such perishable cargoes. The vast proportions which this industry might attain if the necessary capital were forthcoming to build well ventilated vessels are known to all interested in the fruit business. Five times the tonnage now utilized would not be sufficient to supply the demand which would come from the west, and most of which of necessity goes to New York. It is time our home dealers were persuaded to make the endeavor to capture the trade.

Our local railroads, with commendable enterprise, have ordered the immediate shipment of all tropical fruits, and, when possible, give these trains precedence over others containing less perishable matter. The most important branch of the business to the people of Louisiana is the local traffic in peaches, plums, and other home fruits. The poorer class of people do not seem to realize the money that lies in fruit culture. They, as a rule, prefer to hunt and fish, and cannot be prevailed upon to undertake more serious work. The culture of oranges is certainly one of our prime industries. It is a hardy tree, gives a sure crop, has few insect enemies, and lives for more than a hundred years. The age of trees may generally be ascertained by the number of concentric ligneous layers, each layer corresponding to the growth of a year; but this principle does not apply to tropical fruits. M. Charency found a tree at Palenque, in Mexico, which he judged was eighteen months old, and found eighteen rings! A good orange tree will bear from one to three thousand oranges yearly. But very little capital is needed for starting a grove, and the rewards are very great. In five years after transplanting, if one hundred trees have been set out on an acre, that acre will yield 10,000 oranges, the next year double that amount, and in ten years one is sure of a life income. As much may be said of the banana, which grows with very little trouble. It is extremely nutritious. An invalid unable to swallow harder food will take it easily. Humboldt declares that 44,000 pounds of bananas can be produced on the soil that would be required for 1,000 pounds of potatoes, and moreover, the same area that it would take to raise wheat for one man would produce enough bananas to feed twenty-five men. Then we have the fig, immense quantities being canned every year and shipped to all parts of the world, besides the amount used for home consumption. The pomegranate grows luxuriantly; also plums in endless variety. Hamburg, Muscat, Concord and Scuppernong grapes in vast quantities, with several varieties of berries. Small fruits are very profitable. One great advantage they possess over any other fruit crop is the quick return of the investment. In planting a pear or apple orchard years must elapse before there is any return, or at least sufficient to compensate for the mere labor of planting and cultivating the trees. The return with small fruits is immediate; all berries, except the grape, will yield a partial crop the first year, and bear full in the third, providing due attention is paid to the preparation of soil and cultivating. How many patches of ground that are now allowed to run waste, overgrown with weeds and briars, might be made, with a little outlay, to yield an abundant crop of delicious and health-preserving fruit? Their cultivation is so simple any woman could readily learn it, and earn hundreds of dollars a year, instead of sewing from morning until night in a close room at starvation prices and ruining her health besides. The fitness of the soil of Louisiana for tropical and semi-tropical fruits is astonishing. We have within our borders a tropic land which should in future years be inhabited by thousands of fruit-growing families, getting healthy and rich from the cultivation of the soil.

RECENT LEGAL DECISIONS.

[*Prepared expressly for* BRADSTREET'S.

In Maine cider, when sold in less quantities than five gallons, to be used "as a beverage," is intoxicating liquor, according to the decision of the Supreme Judicial Court of Maine, in the case of The State vs. Roach.

A son-in-law has not an insurable interest in the life of his mother-in-law, according to the decision of the Louisiana Supreme Court, in the case of Rombach vs. Piedmont and Arlington Life Insurance Company, a note of which appears in *The Reporter*.

When the note of a principal debtor upon a bond is taken, payable at a fixed future time, the surety is not discharged if the right of immediate action upon the bond is reserved, according to the decision of the Supreme Court of Iowa in the recent case of Jones vs. Sarchett.

In order to avoid a sale which appears to have been for a reasonable price, the creditors of the vendor must not only prove that he made such sale to hinder and defraud them, but also that the vendee participated in such fraudulent intent, according to the opinion of the Supreme Court of Missouri in the recent case of Ryan vs. Young.

The use by a partner of the assets of his firm for the payment or security of his individual debt is a violation of his obligations to the partnership, and when the party with whom he is dealing has knowledge of the fact the transaction is null as to the creditors of the firm. Carter et al. vs. Galloway et al., decided by the Supreme Court of Louisiana on the 17th inst.

In the recent case of Chambers vs. Short the Supreme Court of Missouri held that a book-dealer who forbids his canvasser to collect any money in the sale of books except for those actually delivered by him, may recover from a third person the price of books sold to him by the canvasser by order merely, even though such person paid the canvasser and was ignorant of the instructions given to him. The court held that a canvasser has no implied authority to collect the price of a book sold by him by order.

A partner who permits his copartner to purchase all goods for the firm and to pledge its credit without limitation, is liable on a note given by his copartner in the firm name to an innocent third person, for goods purchased for his private use, according to the opinion of the Missouri Supreme Court in the recent case of Hayner vs. Crow. The court put its decision upon the familiar principle that where one of two innocent persons must suffer by the act of a third person, that one must bear the loss who has been the occasion of the confidence being imposed or the credit given.

An insurance company issued to one Meadows a policy of insurance containing the following clause: "The commencement of a mortgage incumbrance of any kind or of any suit in any court concerning the title, shall render this policy null and void." It appeared that there was a mortgage on the property at the time the policy was issued, and that this fact was known to the insurance company. The mortgage on the property was foreclosed and the property sold under it, and shortly thereafter the property was destroyed by fire. Meadows recovered in an action upon the policy; but the judgment of the trial court was reversed by the Supreme Court of Iowa, which held that the policy, according to its terms, became absolutely void on the happening of the things contemplated in the clause quoted, Meadows vs. Hawkeye Insurance Company.

The case of Hancock vs. Rand, recently decided by the New York Court of Appeals, throws some light upon the question of the liability of innkeepers for the loss of valuables belonging to their guests. The plaintiff (Gen. W. S. Hancock), having no permanent residence, and being subject to transfer by order of the government, in November, 1873, engaged specific rooms for himself and his family in the defendant's hotel at a fixed monthly price, less than transient rates, with meals at the defendant's restaurant connected with the hotel, to be paid for as ordered, with the understanding that if he were satisfied and were not sooner ordered away by the government, he would remain until the next spring or summer. In March, 1874, valuables belonging to the plaintiff were stolen from the rooms. It appeared that the defendant failed to comply with a statute of the state as to notifying guests to deposit valuables in the hotel safe, which failure on his part left the case to be governed by the rules of the common law as to liability. The court held that the relation of innkeeper and guest existed, and that the defendant was liable.

The meaning of the words "breach of trust," in the new (English) Bankruptcy act, which provides that "an order of discharge shall not release the bankrupt from any debt or liability incurred by means of any fraud or breach of trust * * * but it shall release him from all other debts provable in the bankruptcy, with certain exceptions," was involved in the case of Hoyne vs. Kelly, decided in the Chancery Division of the High Court of Justice on the 10th inst. The facts in the case were that by a deed made in 1877 between the defendant Kelly and the plaintiffs certain letters patent were assigned to the defendant for the benefit of the parties named in certain proportions. The defendant was to have the control of the patent without any interference on the part of the others; but there was not to be a partnership. Kelly carried on the business under the patent. After a time disputes arose, and the plaintiffs called for an account of all dealings and transactions; and the allegation was that Kelly had charged the account against the working of the patent with certain outgoings which were improper. Accounts were taken in the action, and the chief clerk had certified that some of the items in the account should be disallowed. Subsequently Kelly went into liquidation and a trustee was appointed. The question was whether the charges of the defendant in the account were so improper as to amount to a breach of trust. Mr. Justice Kay said, after commenting upon the accounts, that he did not think the charges made by Kelly against his co-adventurers, and which had been disallowed, were so improper as to amount to a breach of trust.

BUSINESS NOTES.

The number of failures in the United Kingdom, reported to *Kemp's Mercantile Gazette* for the week ending December 12, was 264 against 239 and 282 in like weeks respectively of 1882 and 1881; of these England and Wales had 227 against 223 and 256; Scotland 30, against 13 and 21; and Ireland 7, against 3 and 5.

Foreign exchanges are discussing a projected ship canal to connect the Baltic with the Black sea. The cost is estimated at $24,000,000; but in case it is made available for war vessels it will cost about $30,000,000. The plan contemplates three-fifths of the expense is to be borne by Russia, the remainder to fall equally on Hanover and Oldenburg and the cities of Bremen and Hamburg.

The New Orleans *Times-Democrat* exploring expedition, which has returned safely from the Everglades of Florida, tells of mounds and canals constructed by the Indians and numerous attractive islands. Eight rivers were ascended to the dense swamps in which they take their origin. Large tracts of land have been purchased by Louisianians along the Caloosahatchie river.

The following are the imports in quantities of iron and steel into the United States from the United Kingdom for November as compared with the corresponding month in 1881 and 1882:

	Tons		
	1881.	1882.	1883.
Pig	26,002	35,274	23,653
Bar, angle, bolt and rod	4,198	2,209	254
Railroad of all sorts	15,421	4,682	6,702
Hoops, sheets and boiler plates	2,040	4,136	577
Tin plates	14,329	16,711	17,509
Cast and wrought	572	1,117	190
Old for remanufacture	8,156	6,875	420
Steel, unwrought	13,311	3,973	865

The Cleveland *Trade Review*, published Saturday, gives a report of manufacturing industries of Ohio cities. Those reported contained, in 1880, 8,000 establishments, with an aggregate capital of $122,000,000, employed 120,000 hands, and turned out products valued at $238,000,000 per annum. It is reported that the majority of these manufactures ran steadily during the past year, and that the volume of business was about the same as that in 1882, although the profits were less. Several new industries have been established during the year.

Messrs. J. Bell Forsyth & Co., of Quebec, in their annual lumber circular, state that the past year has been very unsatisfactory both to the manufacturer and shipper. The total supply of Canadian lumber, except white pine, has been moderate; the export has been rather above the average of the past five years, and the stock wintering is light, in some cases considerably under the average. The trade with South America is again increasing, and the exports are largely in excess of last year. The supply of white pine has been much greater than is now required.

The highest speed attained on railways in England is 65½ miles an hour; in France, Germany and America it reaches 62½ miles. The average speed is 48½ miles an hour with English express trains, and 45 with French. England and France charge more for third-class passengers than any other country except Turkey. The average fare in Turkey is 8.75 centimes per kilometer (⅝ mile); in France 6.75, and in England 6.74. Norway is by far the cheapest country for railway traveling, the third-class fares there averaging 1.4 centimes, and next come Russia and Belgium, where the average fare is 3.75 centimes per kilometer.

The New Orleans *Times-Democrat* has on various occasions sent representatives to inquire into the trade facilities and the commercial wants and resources of the foreign countries bordering the Gulf of Mexico and the Caribbean sea, the results of which have been published. The attention of the New Orleans Produce Exchange has been thus attracted, and that body is now looking to an increase of our traffic with Central America and to the establishment of steam communication with that country and the Isthmus of Panama. The journal named calls attention to the fact that while New York has three regular steamship lines to Latin American ports, England, with greater facilities, secures the bulk of this trade.

The question has been asked why the records kept at Honolulu of the exports of sugar from the Hawaiian Kingdom do not correspond with the records of imports of the same at San Francisco. In reply it is stated that the actual value is the amount paid for the sugar by the refineries. The value is computed on one of two bases: the Manila-San Francisco base or the Cuban-New York base. The contract with the planters fixes the price to be paid on the base he has chosen as it exists when the cargo enters the harbor. Thus the custom house figures at Honolulu are only approximate, for the value of the cargo may rise and fall while the vessel is "off the Heads." The sugar factor and planter cannot know until the return mail how much a consignment brought.

The following national banks have been organized: The Wellington (Kan.) National Bank; capital $50,000; James A. Maggard president; F. P. Neal cashier. The Williamstown (Mass.) National Bank; capital $50,000; Frederick Lake president; Charles H. Mather cashier. The First National Bank of La Grange, Ga.; capital $50,000; Lewis J. Rendel president; J. G. Fruitt cashier. The First National Bank of Bowham, Tex.; capital $60,000; W. A. Nunnelee president; A. B. Scarborough, cashier. The Ishpeming (Mich.) National Bank; capital $50,000; Charles H. Hall president; Ingbert N. Oie, cashier. The Grafton (Dak.) National Bank; capital $50,000; Frederick R. Fulton vice president; De Witt C. Moore cashier. The American Savings Bank, New York city, has opened for business. Joseph Perkins has been elected president of the National Bank of Commerce, Cleveland, Ohio, in place of S. T. Everett, resigned. John G. Root has been elected president of the Farmers' & Mechanics' National Bank of Hartford, Conn., in place of A. Oatman.

A deputation of London and Manchester merchants engaged in trade with the African Gold (west) Coast recently memorialized Lord Derby, Secretary of State for the Colonies, for certain improvements in the government of the colonies referred to, to insure more freedom of trade, for reduced taxation there (to reduce duties), and for a better system of transportation by rail and otherwise to enable them to extend their commerce with that region. It was pointed out that at the present time the exports of all goods to western Africa amounted to £2,500,000. The British colonies there, which twenty-five years ago took annually only £200,000 of British cotton goods, had during the past ten years taken annually £500,000 of British cottons, in addition to £300,000 of other British manufactures. But so far as Lagos and the Gold Coast were concerned there had been a decrease during the last five years, British exports to that important market having averaged £320,000 from 1873 to 1877 and £272,000 from 1877 to 1883, showing a falling off of 15 per cent. Lord Derby decided to consider the request for a more efficient colonial government in the Gold Coast colonies. As to the remainder of the prayers he found difficulty in reconciling them. While one plea was for reduced taxation (revenue), another was for a colonial railway system and better pay for officials to induce them to remain in the country a long term of years. Any well-grounded complaint as to the efficiency of the colonial service he would investigate carefully and take measures to remedy.

An important meeting at Blackburn, England, was held December 8 by the discontented Lancashire weavers to discuss the wages question and decide on a course of action in view of the attempt to reduce wages 5 per cent. The chairman said if the operators would agree to run only four days per week and accept wages 5 per cent. less the proposition might be worthy of acceptance. The only other alternative was excessive competition. Another operative said if 73 per cent. of the employers persisted in making the reduction it would be a very difficult thing to resist, and if the strike took place those employed in the more isolated and small manufactories would suffer most. He urged careful consideration before striking. The secretary of the Blackburn Weavers' Association did not think 75 persons should govern the 70,000 who work for them, and thought the reduction proposed unfair. The chairman asked if they would accept a reduction of 5 per cent. coupled with a reduction in working time to four days a week, the 5 per cent. to be added when full time was resumed. A motion to that effect was carried. A correspondent of the Manchester *Guardian* writes, that the earnings of a Lancashire cotton weaver vary according to the number of looms managed. In some districts a male operative will manage six looms with the assistance of a youth. In other places four looms are managed by one operative. Taking an average four-loom weaver to earn 5s. 6d. per loom per week it would appear that the proposed reduction of 5 per cent. will affect his wages to the extent of about 1s. per week. With regard to manufacturers, it may be stated that the reduction will, in a concern of 500 looms, amount to nearly £500 per year.

FINANCIAL.

The fluctuations of the stock market during the past week have been of no particular importance, but business has been much more active than is usual in holiday times. It was active on Monday, the day before Christmas, which was remarked upon as a very uncommon circumstance. The movement of prices has been in the main downward, but there were sharp rallies in the market yesterday. Union Pacific, the Villards and Gould stocks were the chief objects of attention. The Vanderbilt stocks became active yesterday and improved in price. The present feeling in Wall street is not specially cheerful in respect to the future course of the market.

THE LOAN AND INVESTMENT MARKETS.

The stock market has been unusually active for holiday week. A warm contest has gone on over Union Pacific, against which the bear party seem to be waging much the same sort of campaign which they carried on with such conspicuous success against the Villard stocks. The tripartite alliance furnished a *casus belli* for the time, the supporters of the stock alleging that it was to be the salvation of the road, and the bears that it was an open confession of weakness, since it implied that the Union Pacific could no longer stand against competition without the aid and support of other roads. About this much-discussed agreement the public is still in the dark, for it appears that the abstracts of it so far published are merely abstracts of the present agreement between the Union Pacific and all the Iowa pool roads. The new matter, which is really the new alliance, has not seen the light yet. We know, however, that one of the clauses provided that no road shall be admitted to the new pool without the unanimous vote of the three original contracting roads, viz., the Union Pacific, St. Paul, and Rock Island. This must be accepted as another evidence that the alliance is aimed at the Chicago, Burlington & Quincy road, and the latest information is that the managers of this company will refuse absolutely to enter the pool on the terms laid down by the other roads, but will act in harmony with them as to maintenance of rates, but act independently. The position of the Northwest is still undetermined. The Wabash road has, it is stated, been admitted; but the terms of the agreement exclude the other Gould road—the Missouri Pacific. Wabash stock has not shown any strength of late, notwithstanding this arrangement, while Missouri Pacific has been surprisingly weak. This, however, can scarcely be attributed to the alliance affair, because Western Union has been still weaker. Indeed, the whole family of Gould stocks have distinguished themselves during the week by their shakiness, and it is rumored around the street that Mr. Gould is getting out of as many as he can previous to starting on a yachting cruise to the West Indies, where he is said to intend to spend the remainder of the winter.

Last Saturday week the New York Central Company sent in to the State Engineer its report of operations for the year ending September. This week the other roads in the Vanderbilt system published brief abstracts showing their earnings, etc., for the current year, December being partially estimated. The street seemed to consider all the reports neither particularly good nor particularly bad. Their essential features were, in fact, known before the formal publication, and so far as the stocks of the roads affected have moved at all they have moved only with the general market. The New York Central showed that it had earned a fraction of 1 per cent. over its 8 per cent. dividend, but it also increased its bonded debt about $1,500,000; premiums on the bonds sold also went in to swell the receipts, and there was a larger floating debt than the street seemed to be satisfied with. The reports of the Lake Shore, Michigan Central and Canada Southern gave no details about debt. The earnings on stock were put down as 8.14 per cent. The Michigan Central and Canada Southern, now operated as one line, were stated to have earned net, including interest and rentals, $1,825,000. Of this sum two-thirds went to the Michigan Central, under the terms of the agreement, being $1,216,667; and one-third to the Canada Southern, being $608,333. Michigan Central pays 6 per cent. dividends, and Canada Southern 4 per cent. When the quarterly reports of the Railroad Commissioners are made public we shall be able to tell how companies stand, better than from mere skeleton abstracts like these.

With the near approach of the close of the year there is much discussion, as is natural, of the prospects of the coming year. It is a very striking fact that in no one of the circular letters sent out by commission houses in the street is there a hopeful view taken of the immediate future. Depression in trade, further decline in prices, and a return to the state of affairs which marked the years 1876 and 1877 are talked of. If these were the utterances of any one large operator we might naturally suspect them to be biased by his special interests in the market at the moment; but it must be borne in mind that the commission houses are prima facie bull houses. Their business is with the public at large, and the public is always on the bull side. A bear market means a dimunition of business corresponding to its degree of bearishness. When, therefore, we find the circular letter of one of the leading commission houses talking in the strain quoted below, it may be imagined that Wall street doesn't feel particularly cheerful at this time, and the sad soberness which characterized the efforts to get up the usual Christmas eve fun last Monday is very well accounted for. The circular says:

The prospects for the market during the year to come are not altogether flattering. The illusions of hope always lead operators to look for improvement in the near future, but the fact remains that prices have gone down in obedience to laws which seem to be still operating in favor of decline. These laws bear upon the outside situation, and thus fall upon the market with cumulative force. The great law is that of supply and demand. Oversupply glutted every market in 1881. Contraction and losses decreased the investment fund of the country in 1882 and 1883. The investment fund is the source and measure of the public demand for securities. This fund has been diminished, not only by the sale of securities to repair losses in working capital, but by large depreciation in stock holdings. This depreciation has come through an increase in the supply of securities at a time when there was a decrease in the security-buying power of the country. The result was inevitable.

There can be no great lasting improvement in the market until warranted by improved condition outside. Supply must come down to the level of demand. This implies further cutting down of production. Production will cease only as it becomes unprofitable. As prices fall stocks of goods will be sold at a sacrifice. Auction sales and failures will be numerous. Manufacturers will reduce wages in an endeavor to keep their machinery running, but one after another will succumb until, at last, production is down to actual demand. Meantime demand will decrease. Wage workers will find themselves barely able to sustain life. There will be strikes, outbreaks, tramps and all attending ills. Gradually consumers will change into producers. Agricultural wealth will increase. In due time somebody will want supplies and will not be able to get them. Then everybody will want their orders filled at the same time and another boom will begin. Where are we in this cycle of events? Obviously in the stage where prices have fallen to a point which compels general reduction in wages in order to keep machinery in motion. It is by no means certain that the end of the depression will come in the year 1884.

As before said the special significance of these utterances is that they come from those whose business interests lie all the other way. It is almost like a merchant who has a stock of goods to sell giving his views to the effect that trade must fall off and the prices of his goods decline. Even the ever hopeful President Baldwin, of the Fourth National Bank, who made the remarkable discovery at the time that the great New England failures, and others, were "sporadic," and did not indicate unsoundness in the general business situation, was constrained to confess the other day that business during the past year had not been good, and he feared that the prospects for the coming year were not encouraging. The general reductions of wages in all the great departments of industry which have been ordered for January 1 are facts which have excited a particularly depressing influence at this time. They know from past experience in Wall street what this means. No one needs to point out the significance of it. The situation, however, is not without its cheerful side. The circulars of the commission houses do not advise an indiscriminate throwing over of securities. It is considered, probably, that the market may have a fair rise next month, from the large amount of dividend and interest money to be paid out at the beginning of the year. Furthermore, "prices," it is pointed out, "are down to a point which gives fair promise of a trading market in stocks, reasonably safe to buy when down and sell when up, not waiting for more than two or three points either way." It may be added that Wall street is beginning to get seriously concerned about the silver question, the continuous piling up of silver dollars in the Treasury, and no apparent prospect of a stoppage of their coinage, threatening at no distant date to greatly disarrange values.

Of the loan market there is nothing to say save to repeat the same story of the abundance of loanable funds on call at 2 to 2½ per cent. Exchange rates have moved rather capriciously, undoubtedly caused by the movement of securities between here and London, where there has been some buying at the lower range of prices. Posted rates are $4.82½ and $4.85½. Government bonds continue strong. The following were the closing quotations yesterday:

	Dec. 21, bid	—*Dec. 28,*— bid.	asked.
U. S. 4½s 1891, registered	114⅝	114⅞	115⅛

COMMERCIAL.

SUMMARY.

The concluding week in December, which is generally the dullest of the year in mercantile and industrial circles has proved no exception to the rule in 1883. Special telegrams to BRADSTREET'S from leading trade centers show that the merchandise movement has been much slower. Merchants are in many instances engaged in making inventories of stocks and in settling the year's accounts. Orders are light, and a renewal of demand is not looked for until after the first of the year. Leading members of the New York dry goods trade characterize the traffic of the year as quite as heavy as, and in branches thereof in excess of last year, although the margin of profit has been small. This view is corroborated by special advices from Chicago and the northwest. At Boston the view taken is much more conservative, while Philadelphia reports nothing more encouraging. There is still a weakness observable in some lines of cotton goods. Advices from Cincinnati regarding the results of the year's business in general staple lines are more favorable than from any point except Minneapolis and St. Paul, while those from Boston are the least so measured from the side of profits. The general feeling in trade circles appears to be an unsettled one. Traders in all lines confess to viewing the future with no anticipations of special activity in the near future. The snow which has fallen has interrupted transportation in various sections of the west, and its melting has raised fears of damage by floods in southern Ohio and Indiana. The wheat market has been depressed and lower, the decline for the week averaging 1¾c. per bushel. The enormous gain in the visible supply (of over 400,000 bushels) with continued heavy western receipts and no prospect for an export demand has conspired to aid the decline. Indian corn is also lower by 1c. per bushel, notwithstanding renewed complaints as to the bad condition of that saved from the last harvest. Iron is dull, but steady. A prominent pig iron company, once prosperous, with its office in Philadelphia, is about to fall into the sheriff's hands, but this in no way reflects on the market. Stocks of pig are still decreasing. Petroleum is irregular and inactive for certificates. Crude is firm at 9¼c., and none to be had. Pipe-line runs have declined from 70,000 barrels daily in June to 66,000 barrels in December. The average price for the year is over $1.05. The anthracite coal trade is fairly satisfactory. Prices are 25c. less for stove sizes than in December, 1882. The output will not be far from 2,000,000 tons in excess of that of 1882. Ocean freights are very dull. Charters are not in large supply, but the demand is light and rates very low. The wool trade has continued quiet, but prices have been well maintained. There were 260 failures in the United States reported to BRADSTREET'S during the past week, 20 less than the preceding week, 18 more than the corresponding week of 1882, and 99 more than the same week of 1881. About 70 per cent. of the failures were those of small traders whose capital was under $5,000. Canada had 24, a decrease of 9.

THE GENERAL COMMERCIAL MOVEMENT.

[By Telegraph to BRADSTREET'S.]

From Portland, Me.: Taking account of stocks and balancing books is the order of the day. The year's business has not been a profitable one, and trade will be of a more conservative character the coming year. An effort will be for better margins and less bad debts.

From Boston, Mass.: Trade has been light in all departments the past week, owing to the holidays, the indifference of buyers, and the bad condition of the streets. In some branches business has been almost suspended, and movements generally have been confined to merchandise wanted for immediate use. The year closes with an unsatisfactory feeling in regard to profits, and the prospect of speedy improvement is not promising. The volume of the year's trade in dry goods, clothing, boots and shoes, leather, wool, and other leading articles, is in most cases fully as large as last year's, but few houses have made much money, and many of the large manufacturing establishments will no more than pay expenses. The money market continues quiet at 5@5½ per cent. for the regular discounts, and 5½@6½ per cent. for outside loans on good paper.

From Philadelphia, Pa.: Holiday week has sustained its reputation for dullness in wholesale trade circles, and the movement has been very light in all lines. Mercantile attention has been largely taken up by stock inventories, book balances and other preparations for closing the accounts of the year. Unfavorable weather and transportation difficulties consequent upon the accumulations of snow and ice in the streets have intensified the prevailing dullness. A gradual improvement in trade is looked for during the coming month.

From Cleveland, Ohio: The general situation is about the same as last week in wholesale lines. The close of the year's business will probably show that small profits have been made. The indications point to a quiet winter. Collections a little closer than last year. Bank deposits have increased, owing to the large holiday trade, and the demand for money is not so brisk. These conditions will, however, be reversed after the first of the year.

From Cincinnati, Ohio: Wholesale trade in this locality is still lethargic. The market for country produce is depressed under a light demand. Money is plenty with slightly increased activity in loans. Country banks are making but little requisition for currency. The year is closing with pretty general satisfaction to merchants and manufacturers, and the impression prevails that ample preparation has been made to meet any disturbance which may occur through the failures which usually result after the closing of the year's business.

From Columbus, Ohio: Trade as a whole can only be quoted fair, with the prospects not the brightest. The money market is easy. Prime paper is 8 per cent. Exchange par.

From Evansville, Ind.: Trade is quiet in all lines, and merchants are preparing to take an inventory. The Ohio is rising rapidly, and it is feared it will flood the bottoms, causing great loss to the farmers by damage to the corn crop, which is yet unmarketed.

From Chicago, Ill.: Money is actively called for. January settlements are firm at 6@7 per cent. Collections from the country are as good as expected. The jobbing trade about up to the average at the close of the year. The year's sales will show a small increase on 1882, but little or no profits on most lines of goods. New York exchange is 25c. discount, with a good demand from merchants.

From Peoria, Ill.: The year's trade has averaged well, but goods have been sold close. The holiday trade was good. The present weather has stimulated trade some.

From Louisville, Ky.: The season's trade is winding up satisfactorily, with fair average collections. Money is steady and in moderate supply at 7 per cent. Exchange is firm and active at 50c. discount.

From St. Louis, Mo.: Excepting holiday specialties, general trade is dull, but not more so than usual at this season. Money is less active than for some time, but inquiries are brisk for the new year, and the 8 per cent. rate is very firm. New York exchange is 50c. discount, and prime commercial bills are $1 discount.

From Detroit, Mich.: General business very quiet. Merchants generally are taking stock and making no effort to do business. The weather is seasonable and has a noticeable effect on collections, which are better than anticipated.

From Burlington, Iowa: Trade for the past year has been satisfactory. Holiday purchases show an increase, though less in some lines, because of unseasonable weather. The general wholesale trade is now comparatively dull. Money is in fair demand.

From Milwaukee, Wis.: The merchandise markets are quiet as usual at this time of year. Money is fairly easy at 6 to 8 per cent.

From Lawrence, Kan.: Trade is dull, except in holiday goods. Money is easy and collections good.

From Topeka, Kan.: General trade is quiet. Money is close, and the banks are scarcely able to supply the demand. Collections are slow.

From St. Paul, Minn.: The temporary trade revival incidental to the holidays has been succeeded by a marked dullness, and sales are less than a month ago. For the whole year they are greater than in 1882. Consumers buy sparingly. Merchants are now more hopeful; not inclined to grumble. The outlook is quite good. The volume of holiday retail sales is greater than last December. Money is very close, and the demand is active, with no surplus loanable funds. The banks accommodate only regular customers. Currency movements are moderate, and the shipments are in excess. City deposit balances are fair, owing to generally good mercantile collections. Country balances are fair. Eastern exchange is active, and is at a premium between banks.

From Minneapolis, Minn.: Low temperature has prevailed during the week. Enough snow has fallen to make fair sleighing, but not enough to interfere with railroad traffic. Business has been of the holiday character. Traveling men are generally home for a vacation, and trade is confined to mail orders. Some country dealers visit the city for pleasure and to arrange business for the new year. Money is coming in from the country to a moderate extent, but collections are a little slow. The money market is close. There is less demand for money, but the call for renewals by bank customers and the wish to curtail their line of discounts by banks renders it difficult to place outside paper. Eastern exchange steady.

From San Francisco, Cal.: The holidays practically suspended the wholesale trade. Retailers have been busy. Copious rains throughout the state have created a better feeling, and farmers are satisfied.

From Baltimore, Md.: The trade situation is unchanged. There has been a very light movement and no special activity is noticed in any department Retailers are doing a fair business, but not up to expectations. In some branches it is much smaller than in December last year.

From Wilmington, N. C.: The rain for several days now threatens a storm. General business is very dull, and more attention is given to collections, which are good, than to sales. Provisions, breadstuffs and grain are inactive and stocks are sufficient for present wants.

From Savannah, Ga.: Nearly all lines are moving slowly since Christmas. Jobbers are very quiet and retailers inactive. Money is in good demand but stringent, except on best collaterals. In stocks, securities and railroad bonds there is but little doing, and collections are coming in slowly.

From New Orleans, La.: General trade is quiet except in holiday goods, which are active. There is a good demand for money to carry the large stock cotton and sugar, and to send to the country to close up the year. This maintains very stiff rates, which restricts movements in securities and slightly depresses.

From Memphis, Tenn.: The general volume of business the first part of the week was rather brisk, but since Christmas trade has grown dull. Money 8 per cent. Exchange par.

INDUSTRIAL.

The probable outcome of six months of active effort of the leaders of the bituminous coal miners in western Pennsylvania will be the inauguration of a general strike in eight western counties of that state. The coal-producing capacity of that section has been nearly doubled during the past year by the building of railroads through the nine counties, and the opening of mines. The coal operators have been quietly discussing the advisability of a general reduction in wages, but as no organization exists among them, the movement has not taken decided shape. The workmen, anticipating such action, and feeling the need of some general labor organization among the 30,000 miners in those counties, have formed such a body for the avowed purpose of striking against any reduction. There is fresh probability of trouble among the miners on the Rochester & Pittsburgh Railroad. Umpire Weeks has decided that the fourth pool operators shall pay 3c. per bushel which the miners demanded. A strike of the engineers, conductors and brakemen on the Pittsburgh & Western road has been threatened, but so far very few of the employés have left. The Thomas Iron Company have posted a notice at Catasauqua, Pa., of a 10 per cent. reduction to take effect January 1. The latest effort to terminate the strike of the window-glass workers has failed. Heavy contracts have been made with Belgian manufacturers, and the manufacturers say that if these stocks can be had promptly, the defeat of the workmen is only a question of time. The workmen have financial assistance secured to them by friendly labor organizations. The Knights of Labor are increasing their assemblies and are quietly turning their attention to politics. There are fifty-seven knights in the Pennsylvania legislature, and the legislatures of other states have a fair sprinkling. Several reductions in wages have been made in rolling mills and blast furnaces and in New England textile mills. It is announced that manufacturers in that section are discussing the advisability of a further general reduction. The large stocks of goods in warehouses and factories are forcing the discussion of a suspension of work in other lines of manufacture. The biennial session of the Socialist Labor Congress was held in Baltimore on Wednesday, Thursday and Friday of this week, with twenty delegates present. The wages depression has not yet reached its limits. Loud protests will probably be made by labor organizations before Congress for legislation to prevent the importation of labor by contract. Reports from the English coal fields in reference to mining agitations are at variance. From the miners' point of view a general strike for a 15 per cent. advance in wages seems probable, but their action subsequent to making this declaration seems to indicate that it was made without the approval of the general body of workmen. There is a movement to introduce arbitration and the sliding scale, but the producers are not in accord on the question.

INDUSTRIAL FEATURES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The collapse of the large manufacturing house in Providence, R. I., and the probable closing of several large mills disturb the industrial situation. A careful canvass of the firms which represent the leading mills in Massachusetts, New Hampshire and Maine reveals no special cause for alarm. There is no talk of shutting down or even of curtailing production to any great extent. All keep their help employed, and will run along as usual during the winter. A reduction of wages may be attempted in some places, as the cost of production is out of all proportion to the prices realized for goods, but this will be done with a view to benefit operatives as well as employers. A large number of unskilled laborers are out of work in this city at present, but no more than usual in midwinter. Mechanics, except builders, are fairly employed, but there are few openings for new comers.

From Columbus, Ohio: Buggy manufacturers report trade hardly up to last year, and traveling men who are now in do not believe the future prospects very brilliant. In some sections dealers are reported pretty heavily stocked.

BREADSTUFFS ABROAD.

The holiday season abroad has interfered with activity in the breadstuffs markets quite as much as on this side of the Atlantic. There is little change to note in the latest mail advices from the French markets. In Germany wheat is weak, Hamburg being even lower than Berlin. From Bombay, India, word comes that trade in wheat is very dull. Exporters there are not inquiring for supplies, and prices have declined. Stocks are low. From Calcutta a similar story is forwarded. On the 10th inst. the quantity of wheat on passage from India was 2,448,000 bushels, against 3,248,000 bushels November 10, 5,440,000 bushels October 10 and 6,128,000 bushels September 10 last. Further shipments thence are reported by the *Miller* (London) to have been discouraged by the large stocks held in London, Liverpool, Marseilles and Hull. In the United Kingdom the English farmer is discontented with the rates paid for wheat, and he is said to look with no pleasure on the current low rates at which Russian and Australian new wheat are now offering in London for future delivery. Two weeks ago offers of the new Australian crop were made for early shipment at 45s., and when it is considered that the quality of the December harvest there is expected to be superior, the probability of getting fine white wheat in the spring months at 45s. was not reassuring to British farmers. Again, Russia was willing to sell excellent wheat at 41s. during the spring and summer months, thus giving buyers the chance of securing stocks without the expense of storing them. Accordingly existing low rates lost much of the temptation they might otherwise have had. Nevertheless, these facts bearing on current cheapness do not assure the future, and the opinion has been expressed that if the markets, under the influence of opinion, moved upwards, those who might be possessed of cheap stock would be among the first to demand an advanced value. It is no security that north Russian wheat will remain at 41s., or Australian at 45s., because they were to be bought at such figures a fortnight since.

The foreign importations of breadstuffs from the seven Atlantic ports during the week ended December 22 and for four weeks ended therewith were:

	—Flour, bbls.—		—Wheat, bush.—		—Corn, bush.—	
	1 wk.	4 wks.	1 wk.	4 wks.	1 wk.	4 wks.
To U. K.	131,613	501,351	561,288	2,098,686	479,983	2,326,500
To Cont.	5,678	37,787	268,830	853,671	150,903	404,600

The quantity of wheat and corn on passage December 26 was:

	Wheat, bush.	Corn, bush.
To the United Kingdom	17,400,000	2,560,000
To continent	2,720,000	320,000
Total	20,120,000	2,880,000
Compared with the previous week:		
To the United Kingdom	17,400,000	2,080,000
To continent	2,640,000	400,000
Total	20,040,000	2,480,000
Comparison:		
To the United Kingdom ....Increase	.....	480,000
To continent.....Increase	80,000	*80,000
Total increase	80,000	400,000
On passage same week 1882:		
To the United Kingdom	19,200,000	800,000
To continent	4,180,000	640,000
Total	23,680,000	1,440,000

* Decrease.

AMERICAN WHEAT MARKETS.

Holiday week on the Produce Exchange has not been conducive to activity and transactions have been very light. Dullness always suggests weakness in prices, and quotations have consequently grown smaller. Foreign cables have been scarce, and the exchange wisely decided to close the days' sessions (this week) at a quarter past two o'clock. Up to Wednesday night the wheat options had declined from 1 to 1½c. per bushel from the quotation of Thursday, December 20.

The increase in the visible supply and weaker cables from London and the continent unnerved the bulls Thursday and prices dropped ¾c. There was considerable fluctuation and weakness in prices again on Friday. There is an increase of 413,038 bushels in the visible supply of wheat, as compared with last week's figures; the total is now 35,531,259. The supply is larger by 14,916,720 bushels than it was a year ago, and by 17,606,642 bushels, as compared with the supply of 1881 at this time.

Speculation, however, is still tending more toward wheat, to the neglect of Indian corn, of which cereal it is rumored that a big January deal (at Chicago) is on foot.

The stock of wheat at New York December 22 was 95,854 bushels less than one week previously, 830,025 bushels larger than one year ago and 2,675,276 bushels in excess of two years ago. The stock of No. 2 red winter was 5,095,822 bushels, a decrease of 31,961 bushels on the week.

The total receipts of wheat at Chicago, Milwaukee, Detroit, Toledo, Indianapolis, Peoria and St. Louis during the week ended December 22 amounted to 2,031,730 bushels, against 2,225,936 bushels in the preceding week, and the shipments to 492,077 bushels, against 482,203 bushels in the week previous.

The receipts of wheat at the seaboard ports for the week ended December 22, 1883, amounted to 382,948, and in the previous week to 436,333 bushels. The exports from the eastern seaboard ports during the week ended December 22 amounted to 645,112 bushels, as compared with 931,953 bushels in the preceding week.

The receipts of grain at western lake and river ports from July 28 to December 22 for the periods named has been:

	1883.	1882.	1881.	1880.
Flour, barrels...	4,940,092	4,307,115	3,585,799	3,736,152
Wheat, bushels	43,450,378	49,316,781	24,904,581	59,196,843
Corn, bushels	54,100,890	30,875,315	59,032,055	60,788,308
Oats, bushels	30,603,175	23,544,005	15,815,485	21,129,485
Barley, bushels	11,488,235	8,100,365	7,421,699	7,877,822
Rye, bushels....	6,134,908	2,392,023	2,664,395	2,461,806
Totals	145,783,886	114,139,149	109,838,215	145,154,864

The course of prices of wheat options at New York and at Chicago (at 1 P. M.) during the week has been:

	—New York—					—Chicago—	
	Dec.	Jan.	Feb.	Mar.	May.	Jan.	Feb.
Fri. Dec. 21	$1.12½	$1.13⅛	$1.15¼	$1.17⅛	$1.21⅛	.98⅛	.99⅛
Sat. Dec. 22	..	1.13	1.15⅛	1.17⅛	1.20¾	.98⅛	.99
Wed. Dec. 26	1.12	1.12¼	1.14¾	1.16¾	1.20⅛	.96⅜	.97½
Thurs. Dec. 27	1.11⅜	1.11½	1.13½	1.15⅝	1.19⅛	.96¼	.97¼

INDIAN CORN.

Prices of Indian corn options at New York declined between the close of December 20 and December 26 from ⅜c. to ¾c. per bushel, fractionally less than one-half as much as wheat. The dullness and lack of stimulus which marked trading in wheat at this port was the cause of this action on the part of corn. The greater relative strength of the latter, however, is ascribed to continued faith in the reports of unexpected shortness in the total crop, the damaged condition of a large portion of that which has been secured, and the rumors that a combination of Chicago operators exists whose object is the elevation of January prices of this cereal. The stock of corn here decreased, during the week ended December 22, 293,085 bushels, but the total on that day was 1,190,402 bushels in excess of that here December 20, 1882. The stock of No. 2 corn here last Saturday was 1,999,753 bushels, a loss of 169,727 bushels on the week. Thursday brought further weakness to corn, owing to the unexpected heavy gain in stocks in sight and the absence of buying support. On Friday it was dull and steady at the close, but lower. Speculation and exports light. The visible supply of corn has increased 348,882 bushels during the week and is now 9,164,258 bushels, which is 930,854 bushels above the supply of a year ago and 8,217,969 bushels below the supply of two years ago at corresponding date.

The receipts of Indian corn at Chicago, Milwaukee, St. Louis, Detroit, Indianapolis, Toledo, and Peoria, for the week ending December 22, were 1,873,858 bushels, against 1,802,132 bushels in the preceding week, and the shipments were 988,959 bushels, against 952,099 bushels in the week ending December 15. The receipts at the seaboard ports in the week ending December 22 were 915,878 bushels, against 1,064,821 bushels in the preceding week, and the exports were 738,343 bushels, against 613,680 bushels in the preceding week.

The course of prices of Indian corn at New York and Chicago (at 1 P. M.) during the week has been:

	—At New York.—				—At Chicago.—	
	Dec.	Jan.	Feb.	May.	Jan.	Feb.
Friday, Dec. 21	..	.65	.66¼	.69⅛	.61¾	.59⅜
Saturday, Dec. 22	.64⅛	.65	.66	.69	.62	.59½
Wednesday, Dec. 26	.64½	.64¾	.66	.69	.61¾	.59
Thursday, Dec. 27	.64⅞	.64¼	.65½	.68⅝	.61	.58⅝

The prices of breadstuffs in New York last evening, as against those of the Friday preceding, as compared with the same at a like date in 1882, were as follows:

PRICES OF BREADSTUFFS IN NEW YORK.

	Dec. 21.	Dec. 28.
No. 2 flour	$2.25 @2.60	$2.25 @2.60
Superfine flour	2.65 @3.00	2.65 @3.00
Com. extra flour	3.60 @3.75	3.60 @3.75
West India shipping flour	5.45 @5.50	5.45 @5.50
South American shipping flour	5.50 @6.00	5.50 @6.00

* In elevator.

The Illinois State Board of Agriculture reports a total yield of corn in that state amounting to 186,583,558 bushels, or an average of 25¼ bushels to the acre (7,304,596 acres). The quality is given at 69, as compared with 100 an average.

AMERICAN BREADSTUFFS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Large buyers have been able to buy flour at fractional concessions, but as jobbers have been taking account of stock there has been little disposition to trade and nominal asking rates are unchanged. The stock in first hands is lighter than a year ago. Wheat has declined 1¼@1½c. and corn 1@1¾c. under increased pressure to sell and a very indifferent demand both from shippers and speculators. The chief grain inspector of this city has made a tour of inspection through the corn belt, and in a full report to the Commercial Exchange states that the bulk of the corn grown north of the fortieth parallel, except in central Nebraska, will not grade up to standard, as it is, to a very large extent, soft and unmerchantable. He found the Iowa crop especially poor in quality as well as deficient in quantity. The crop of the more southerly portions of the corn belt, including Kansas, southern Illinois and southern and central Missouri, he reports of excellent quality as a rule.

From Cincinnati, Ohio: Flour and breadstuffs are slow. The general impression is that the prices are lower than makers can produce for. Wheat and corn are dull and lower.

From Chicago, Ill.: Wheat is weak and depressed by large stocks, estimated at 11,900,000 bushels. Demand is chiefly to settle deals. Receipts are large for the season. Corn is weak and declining. The demand is mainly to fill shorts. The near options show most weakness. Oats are quiet. Stocks are decreasing.

From Louisville, Ky.: Grain is dull and nominal. Flour is in moderate demand.

From St. Louis, Mo.: Wheat is lower and slow. Corn has been active and tended strongly upward, but is heavy and promises to break away. Navigation is resumed, and flour and grain shipments are being made.

From Milwaukee, Wis.: Receipts of wheat for the week ending Thursday average 50,000 bushels daily, against 60,000 in the previous week and during the same time last year. The prospects are for a fair movement for next month, when the Wisconsin farmers are expected to market more freely. Roads in the country are improved since the snow and sleighing is fair. The markets are dull and depressed at a decline of 2@3c. this week. Millers are buying very little flour. Production is light, about 3,000 barrels daily. Receipts of flour this week are 56,000 barrels, and country millers are running light, owing to ice.

From Minneapolis, Minn.: The movement of wheat is light, and the market is quite a little weak, though not quotably lower. The mills are not running to their full capacity. Well-established brands of flour are in active demand. Some of the largest millers have orders for two or three weeks ahead. Still, the general flour market is not active.

From Topeka, Kan.: Grain and flour are fairly active.

From San Francisco, Cal.: Breadstuffs dull at lower prices.

From Baltimore, Md.: There has been a liberal offering of flour, but the demand is only firm. Local dealers buy for current needs only. Wheat has been fairly active, with a tendency towards lower figures, and very little business reported.

From New Orleans, La.: The supply of flour is ample and the market is quiet. Provisions are steady and the stock small. Receipts of corn are 110,000 bushels; wheat none. Exports—Corn none; wheat 44,000 bushels. The stock of corn is 289,000 bushels; wheat none.

PROVISIONS.

Provisions have weakened in price also. Western spot lard declined nearly 1/5c. per pound from December 20 to December 26, and January lard quite ¼c. Pork was likewise weaker. The talk of a reversal of the recent action in France looking to the abolition of the prohibition of importations of American hog products has attracted considerable attention, and in some quarters is directly attributed to (bear) exporting sources. Inasmuch as the action already taken has not been officially confirmed, it is as yet too early to manipulate a market by stories about the reversal thereof. On Thursday hog products were again lower, and it was conceded that whatever the talk about action continuing the prohibition of French imports of American hog products had amounted to it had been discounted. Friday's market was also weak and the demand light.

The export of provisions from the Atlantic ports for the week ended December 22 was as follows:

	Pork, barrels.	Bacon and hams, pounds.	Lard, pounds.
New York	5,424	8,961,520	2,710,976
Boston	369	174,600	600,499
Portland	....	1,101,206	211,080
Montreal	...	.....	.....
Philadelphia	1	1,350,000	.....
Baltimore	3	.....	.....
New Orleans	10	4,000	49,940
Totals	5,807	11,594,326	3,573,095
Previous week	6,836	15,440,321	11,648,767

The export of provisions from the Atlantic ports from November 1, 1883, to December 22, 1883, as compared with the corresponding time of last year was as follows:

	Pork, pounds.	Bacon and hams, pounds.	Lard, pounds.
1883	9,318,400	78,163,625	47,377,936
1882	6,729,800	56,579,835	40,819,785

The prices for leading hog products at New York on the days named were:

	Dec. 22.	Dec. 26.	Dec. 27.	Dec. 28.
Lard, west. spot	9.15c.	9.07c.	9.10c.	9.07½c.
Lard, December	9.19	.....	.....	.....
Lard, January	9.28	9.04	9.06	9.05
Lard, February	9.35	9.14	9.16	9.10
Pork, mess, spot	$15.00	$15.00	$15.00	$14.75

PROVISIONS AND LIVE STOCK.

[By Telegraph to BRADSTREET'S.]

From Cincinnati, Ohio: The provisions trade is quiet, with a weaker tendency in prices.

From Chicago, Ill.: Pork is weaker, business chiefly in selling trades; it has declined 15c. No outside speculative orders. Lard is quiet and rather dull, a shade weaker; there is no shipping demand. Meats are weak with no export demand. Hogs are dull and weak. The estimated packing for the year is 4,400,000; last year 4,000,000.

From Peoria, Ill.: Forty thousand head of cattle are feeding at the distilleries here. The receipts of hogs are good, but cattle light.

From Louisville, Ky.: Provisions quiet and easy. Offerings are light.

From St. Louis, Mo.: Provisions are dull and downward. The cattle supply is scant and the demand light, with steady and fair values. Good hogs are in fine packing demand and higher, but receipts are small.

From Milwaukee, Wis.: The movement of hogs is fair in numbers, but the weight is light, ranging from 200 to 225 pounds gross. The winter packing thus far is 25,000 less than last year.

DRY GOODS AND CLOTHING.

The dry goods market has continued comparatively dull and featureless. There is practically no demand. Merchants are engaged in taking stock and settling up the year's business. The little trade that has been done has been in small lots of miscellaneous assortments. Printing cloths have been in light demand with quotations a trifle easier. Bleached cottons have been taken only for immediate consumption. Woolens have remained inactive and nothing better is expected until late in January. The opinion of the trade is that the year's business has been fully as good if not better than that of last year, and they have strong hope of a good business during the coming year.

The clothing market continues dull, but will probably begin to pick up after January 1. Merchants are looking forward to a profitable business during the coming year, and report business generally satisfactory for this year.

The imports of dry goods at the port of New York for the week ending December 27 were as follows:

	For consumption.		Withdrawals from warehouse.		Warch'sed.	
Manuf'res—	Pkgs.	Value.	Pkgs.	Value.	Pkgs.	Value.
Wool	542	$211,977	235	$101,445	219	$103,093
Cotton	1,349	383,630	225	100,251	472	148,907
Silk	514	272,223	106	57,536	124	57,842
Flax	641	112,425	285	51,001	479	44,509
Miscellan's..	574	94,768	1,010	43,664	8,095	62,925
Totals	3,620	$1,078,023	1,861	$363,037	9,419	$417,877

The total value of all classes of dry goods imported into the United States for the week was $1,078,023, against $1,522,949 last week.

THE DRY GOODS MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The commission and jobbing houses have done nothing of consequence in the way of sales the past week, but all are making preparations for the season which opens in January, and which it is to be hoped will develop more encouraging features than are now apparent. The failure of the large manufacturing firm in Providence has caused some commotion, but has no serious effect on prominent houses here.

From Providence, R. I.: The print cloth market is quiet; 64s are quoted at 3½c. less 1 per cent., and 56x60s at 3 1/16c.

From Philadelphia, Pa.: Stock-taking has engaged the attention of jobbers and little attention has been given to purchases in any branch of the trade. The market is weak for cotton goods, which continue in excessive supply, and the woolen goods situation and outlook are not satisfactory except in the case of a few popular productions which always find a ready market.

From Pittsburgh, Pa.: The dry goods trade is quieter since Christmas, and dealers are taking stock.

From Cincinnati, Ohio: The dry goods market is fair without change.

From Columbus, Ohio: Dry goods jobbers are inventorying, and quote business about equal to last year at this time. Collections remain good.

From Peoria, Ill.: The dry goods trade is a fair average.

From Detroit, Mich.: In dry goods the usual holiday dullness prevails, and there is practically no business doing.

From St. Louis, Mo.: Heavy dry goods continue in excellent demand, but otherwise the trade is quiet with values steady.

From Chicago, Ill.: Dry goods are selling fairly on orders. Stocks of most staples are low. Millinery is dull.

From Topeka, Kan.: Dry goods are dull except in holiday goods.

From St. Paul, Minn.: Dry goods are very quiet. Retailers have sufficient stocks to carry over January 1, and buy only for actual necessities. A dull trade anticipated.

From Baltimore, Md.: There is practically nothing doing in dry goods. Jobbers are busy with their annual stock-taking and winding up the year's business.

From Memphis, Tenn.: In wholesale dry goods business is about the same in amount as the previous week.

From Savannah, Ga.: The trade shows no new features.

CLOTHING.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: Manufacturers are preparing for the spring trade, and will start their salesmen on the road about the middle of January. The year's business has been fairly satisfactory, and clothing houses here are in a sound financial condition.

From Cincinnati, Ohio: The clothing trade is making liberal arrangements for the spring trade.

From Chicago, Ill.: Clothing and hats and caps are in light order demand.

From St. Paul, Minn.: The hat and cap trade for the season is practically closed. Clothing is slow.

COTTON.

The week just passed is two days short, owing to the closing of the Cotton Exchange on Monday and Christmas. The market for spot cotton has been easy. Sales have been light and nearly all for consumption. Quotations are higher, closing last night at 10 7-16c. for middling uplands, against 10⅜c. last week. The sales for the week have been as follows: For export, 10 bales; for consumption, 755 bales, and for speculation, 242 bales. The total sales are 1,007 bales, against 2,144 last week. Deliveries on contract amount to 1,400 bales.

Below will be found the closing quotations for prompt delivery uplands at New York, on Friday evening, as compared with last week and the corresponding week last year.

	This week.	*Last week.*	*Last year.*
Ordinary	8 3-16c.	8 1/16c.	7 11-16c.
Strict ordinary	8 11-16	8⅜	8⅛
Good ordinary	9 1/16	9 7-16	8 15-16
Strict good ordinary	9⅜	9 5-16	9⅜
Low middling	10 1-16	10	9 13-16
Strict low middling	10¼	10 3-16	10 1-16
Middling	10 7-16	10⅜	10¼
Good middling	10 11-16	10⅝	10⅛
Strict good middling	10 13-16	10¾	10 11-16
Middling fair	11 5-16	11¼	11 3-16
Fair	12 1-16	12	11 15-16

STAINS.

	This week.	*Last week.*	*Last year.*
Good ordinary	7 5 16	7¼	7 5-16
Strictly good ordinary	8 9-16	8½	8⅛
Low middling	9 3 16	9⅜	8 13-16
Middling	10 1-16	10	9¾

The market for spot cotton closed quiet.

The future market has been firm and steady and a fair business has been transacted; prices are a trifle higher, near months showing an average advance of 7 points and later months 6 points. The total sales aggregate 508,900 bales, against 572,000 last week and 360,600 for the same week last year.

The following table shows the closing quotations for futures at New York Friday evening, compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
December	10.45	10.33	....
January	10.45	10.42	10.19
February	10.65	10.60	10.27
March	10.80	10.75	10.40
April	10.95	10.89	10 53
May	11.09	11.04	10.65
June	11.23	11.18	10.78
July	11.35	11.29	10.90
August	11.44	11.38	10.96

The market for futures closed barely steady.

The southern markets have been quiet and steady. Below will be found the sales for the week and the closing quotations for middling uplands at seven leading ports as compared with last year:

	Week's sales	*To-day.*	*Last year.*
Galveston	5,262	9⅞	9¾
New Orleans	.....	10 1-16	9 11-16
Mobile	.....	9¾	9 9-16
Savannah	10,400	9⅞	9⅜
Charleston	1,630	10⅛	9⅞
Norfolk	5,466	10	9 11-16
Baltimore	1,391	10¼	9⅞

The total receipts of cotton at the ports since September 1 are 3,361,082 bales against 3,386,559 last year for the same time. The total at each port since September 1 is as follows, compared with the total to the same date last year:

	This year.	*Last year.*
Galveston	452,143	485,473
New Orleans	1,068,302	844,124
Mobile	191,002	209,627
Savannah	530,717	570,010
Charleston	331,977	400,505
Wilmington	74,660	85,290
Norfolk	425,427	490,994
Baltimore	20,368	15,583
New York	46,765	67,089
Boston	63,759	75,690
Philadelphia	6,431	31,212

The total receipts for the week were 200,646 bales, against 247,108 last week, and 251,192 for the same week last year.

The receipts at the twenty-four interior towns usually reported were about 62,000 bales, against 100,224 bales last week and 101,277 bales for the corresponding week last year. The shipments for the week were 56,621 bales, against 90,132 bales last week and 73,667 bales for the corresponding week last year. The stocks for the week were 396,000 bales, against 391,054 last week and 337,345 for the same week last year.

Below will be found the receipts at each of the ports for the week ending December 28, 1883:

	Sat.	*S. & M.*	*Tues.*	*Wed.*	*Thurs.*	*Fri.*
Galveston	2,848	6,857	3,280	4,668	4,125	2,435
New Orleans	11,829	21,333	17,088	8,525	9,843	18,753
Mobile	3,175	3,014	605	2,821	181	2,665
Savannah	5,425	4,977	4,729	4,562	3,423	2,213
Charleston	2,071	2,004	1,500	678	2,053	1,955
Wilmington	215	602	195	76	292	143
Norfolk	3,038	5,847	2,801	2,974	958	630
Baltimore	317	332	349	....	242	1,148
New York	1,266	663	222	316	1,182	1,970
Boston	1,917	1,261	2,225	....	2,262	1,683
Philadelphia	38	....	....	38	50	25

The Liverpool market for spot cotton has been firm with a moderate inquiry, which was freely supplied. Quotations for middling uplands are 1 point higher, closing last night at 5 13/16d. The market for futures has been dull but steady. Quotations show an average advance of 3 points for near months, and 4 points for later ones. The week is two days short, Tuesday and Wednesday being holidays.

Below will be found the closing quotations on Friday of low middling uplands as compared with last week and the corresponding week last year:

	This week.	*Last week.*	*Last year.*
December	5 53/64d.	5 51-64d.	5 43-64d.
December-January	5 53/64	5 51-64	5 43-64
January-February	5 58/64	5 52-64	5 43-64
February-March	5 59/64	5 56-64	5 44 64
March-April	6 01-64	5 58-64	5 46-64
April-May	6 03/64	6 01-64	5 50-64
May-June	6 5-64	6 1-64	5 54-64

The market for futures closed barely steady.

The sales for the week at Liverpool were 36,000 bales (of which 28,000 were American), against 32,000 (of which 24,000 were American) last year. The sales for export were 2,000 bales, against 2,800 bales last year. The sales for speculation were 540 bales, against 890 bales last year. The amount forwarded was 8,900 bales, against 21,000 bales last year. The stock in port is 641,000 bales (of which 418,000 are American), against 663,000 bales (of which 395,000 were American) last year. The total imports for the week were 117,000 bales (of which 97,000 were American), against 167,000 bales (of which 129,000 were American) last year, and the amount afloat 353,000 bales (of which 283,000 are American), against 361,000 bales (of which 318,000 were American) last year.

The Manchester market steady.

The Havre market closed quiet.

COTTON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Providence, R. I.: The cotton market is dull and easy. Middling uplands are worth 10⅝c. and middling gulfs 10⅞c.

From Philadelphia, Pa.: Spinners have bought very sparingly, but prices have undergone no quotable change.

From Cincinnati, Ohio: Cotton is dull and unchanged.

From Louisville, Ky.: Cotton dull and easy.

From St. Louis, Mo.: Cotton is quiet, with values weak and fluctuating, and receipts and shipments light.

From Norfolk, Va.: Cotton is coming in fully up to the standard. Many steamers and sailing vessels are loading. Collections are fair, and money is easy.

From Wilmington, N. C.: Cotton is in good demand, chiefly for foreign export.

From Charleston, S. C.: Cotton is steady and factors are holding for higher prices. Buyers are not operating.

From Baltimore, Md.: The cotton market closed quiet and dull, with little inquiry.

From Savannah, Ga.: The cotton market is steady without activity. Factors continue firm but the large stocks held here will soon have to be moved.

From New Orleans, La.: Remarkably fine weather, largely increased transportation facilities and demands of factors have caused the recent heavy receipts at the expense of the interior towns and plantations. The latter are reported exhausted as to cotton supplies. Lessened receipts this week are partially due to the holidays. Crop estimates are unchanged. The market recovered from Wednesday's decline. Increased offerings of low dusty cotton show the tail end of the crop. Since last week Thursday the movement has been fair. Spots have advanced ⅛c. Januarys declined 7 points. The other months are up 4 to 11 points.

From Memphis, Tenn.: The cotton market is steady in tone, and an advance in price is confidently looked for in the higher grades.

WOOL.

The eastern wool markets have ruled very quiet during the week, but this condition of trade was expected, in view of the holidays and approaching close of the year. The market in detail has undergone no appreciable change. Combing and delaine and fine-washed clothing wools continue to show greater firmness and attract more demand than other descriptions, but the whole market is very steady, and dealers, with few exceptions, look for an improvement in trade, if not in prices, during the coming month.

AMERICAN WOOL MARKETS.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The demand for wool has been quite moderate this week, the Christmas holidays and unfavorable weather having kept buyers at home. The sales of the week have been 1,367,500 pounds of all kinds. In prices no change, and desirable fleeces are still held with considerable firmness. Ohio and Pennsylvania fleeces have been selling at 36@38c., and choice X at 38½c., XX fleeces at 40@42c., and Michigan X at 34@35c. per pound, but good Michigan X is generally held at 35c. and upward. Combing and delaine fleeces are steady, with sales of coarse and No. 1 combing at 32@45c. per pound, and fine Michigan and Ohio delaine at 39@42c. per pound. Unwashed wools have been quiet and unchanged. The sales have been at a wide range of prices, but remain the same as noted last week. The sales of California wool have been light and include 75,000 pounds good fall at 21½c. per pound. Pulled wools remain unchanged and have been quiet. Choice eastern and Maine fleeces have been sold at 40@42c., and common to good at 25@38c. per pound. In foreign wool no movement of importance. Small lots of New Zealand and Australian have been taken at 40@41c. per pound

From Philadelphia, Pa.: Trade has been very dull with most houses, but holders are not urging sales except at full former prices. The week's transactions foot up about 500,000 pounds, all kinds.

From Columbus, Ohio: The wool trade quoted quiet and demand very light, a great many mills having closed during the winter months.

From Chicago, Ill.: Wool is steady and quiet. Stocks are low.

IRON.

The current week is generally the dullest in the year in nearly all lines of trade, and the iron market is no exeeption to the rule. Prices of American pig iron are unchanged, the bottom price still being $20 for No. 1 X, $19 for No. 2 X, and $17 for grey forge. Sales have been very light. It is the opinion, however, that prices have reached bottom, and that while some time may have to elapse before any advance can be made it is quite improbable that lower rates will be obtained. The current year opened with 417 furnaces in blast and 270 out of blast. On June 1 the number in blast was 351, and on July 1 334, or 83 less than on January 1. On November 1 the number in blast was 331, or 86 less than on January 1. On the latter date the gross stocks of pig on the banks and in agents' hands amounted to 383,655 gross tons, and this by July 1 had increased to 528,590 gross tons, a gain of 144,935 tons. On November 1 the decrease in stocks was 96,236 gross tons, leaving 432,354 tons unsold, against 528,590 tons July 1. Since September 1 the stocks at one leading furnace company's works have decreased from 32,000 to 11,000 tons, which may be taken as an indication of the effect of the process of curtailment of production. Stocks now are lower than ever and are declining. Makers are averse to listening to offers under the market, and the result must, sooner or later, be a revival in demand and price. Bessemer is very dull, and sales have been made at $20, a cut of 50c. Manufactured iron continues stagnant, although the reduction in output is expected to have a stimulating effect. Since the stoppage of the western nail mills the market has experienced some additional strength. Steel rails are steady at $35 for 1884 delivery at the mill. Sales in New York during the week are reported to aggregate about 20,000 tons. Scotch pig iron is dull at unchanged prices, Coltness being held at about $22.25. Arrivals during the week were heavier than usual, aggregating about 1,800 tons, of which about 200 tons were stored. Demand is light, with no special indication of any gain in the near future. Sales were about 700 tons.

THE AMERICAN IRON MARKETS.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: A good deal of forge pig has been quietly sold at concessions, but in general buyers have been awaiting the turn of the year. One 5,000 ton lot of Bessemer pig sold for New York account at $20, and other lots are under negotiation. Merchant bar is weak, but there has been more inquiry for January delivery. Construction iron is dull, but prospects for trade are good. Old material is wanted, but is scarce and firm. Steel rails are quoted firmly at $35, but no large lots are being placed.

From Pittsburgh, Pa.: The iron markets are without appreciable change. There is a better inquiry for nails since the stoppage of factories. Buyers are manifesting more willingness to anticipate their wants. Prices unchanged.

From Cleveland, Ohio: The iron trade situation remains unchanged.

From Chicago, Ill.: Bar, plate and structural iron are in light request and unchanged. Nails are dull. Pig iron is dull, with small jobbing orders, and prices are unchanged. Stocks are very moderate.

From Detroit, Mich.: In iron the market is steady, but the volume of business is very small.

From St. Louis, Mo.: But little is doing in the iron trade, but this dullness is usual at the close of the year. The opinion here is that there will be no great changes in the iron situation with the opening of the year.

From St. Paul, Minn.: Heavy iron sales are more miscellaneous in character than last December, but fair for the season.

COAL.

The anthracite coal trade closes the year in a moderately satisfactory condition. To producers the preceding year was more satisfactory than 1883, owing to the scale of prices at that time having been a steadily rising one, while in 1883 it has been falling. Notwithstanding this the trade is in a generally healthful state. Sales at the west have exceeded those of any preceding year and promise to increase in the future. The general gauge of prices may be inferred from the following prices per ton furnished from the order books of a leading Lehigh coal company:

ON BOARD, AT TIDEWATER, PER TON.

Stove Coal.	*Jan.*	*July.*	*Sept.*	*Dec.*
1883	$4.35	$4.20	$4.30	$4.15
1882	4.85	4.00	4.40	4.40

Stocks of anthracite on November 30, 1883, amounted to 696,380 tons as compared with 535,891 tons on a like date in 1882, a gain of 160,489 tons. For this reason a reduction in the output was ordered in the second, third and last weeks in December, amounting to half-time at the mines. It has been proposed to continue the restricted output for three months into the new year, but nothing on this point has yet been decided, so far as has been made public. The position of the trade December 1, notwithstanding 160,489 tons in stock in excess of that at a like date in 1882, was quite as good as that last year, for the reason that the stocks were mainly in the hands of producers, while last year retail dealers held much larger stocks than they now do. The latter have been averse to buying on a falling market and have thus let producers carry stocks rather more in proportion than usual. The total output of anthracite coal (in Pennsylvania) from January 1 to December 22, was 30,814,223 tons as compared with 28,776,201 tons in a like portion of 1882. The outlook for the production during the remainder of December is approximately 250,000 tons. This points to a total production of anthracite for this year of 31,064,000 tons as compared with 29,120,000 tons in 1882, a probable gain in production in 1883 of about 2,000,000 tons.

COAL MARKET REPORTS.

[By Telegraph to BRADSTREET'S.]

From Chicago, Ill.: Coal is in good request. The year's sales show an increase over those of last.

From Cincinnati, Ohio: Coal is quiet. The high water is bringing to the city some 2,000,000 of bushels, which, with stocks on hand, will keep the market from an advance.

From Cleveland, Ohio: The coal trade compares favorably with that of last year. A large falling off is shown within the last sixty days, owing to the late mild weather and the fact that the railroads are not using so much as usual.

PETROLEUM.

In speculative circles trading in pipe-line certificates has been limited in the few days on which the exchanges have been open during the past week. Well news has not figured conspicuously. The general feeling appears to be that no decided movement is likely to be made until after January 1. Quotations have remained fairly steady, fractionally above $1.13. On Friday the market continued dull and uninteresting, as is customary at this time in the year. There was no well news.

The following shows the fluctuations in prices of pipe-line certificates at New York during the week ended last evening:

	Opening.	*Highest.*	*Lowest.*	*Closing.*
Saturday, December 23	1.13⅜	1.14⅜	1.13¼	1.14¼
Wednesday, December 26	1.14⅜	1.14⅜	1.13	1.13⅛
Thursday, December 27	1.13½	1.13½	1.13⅛	1.13⅛
Friday, December 28	1.13½	1.13⅝	1.13	1.13¼

There was a slight change in the petroleum products market during the week. Refined (70° Abel test) was bid for to a moderate extent at the late prevalent rate of 9¼c. for export, but refiners did not offer the oil. On Thursday late January delivery was advanced to 9⅜c. Case oil has continued steady at 11c. (for export) for the best brands. New York state best (refined) for the home trade has been sold at 10@10½c. Bradford and Parker brands of crude have been reduced ⅛c., and naphtha, which was quiet, is now firmly held at the advance of ¼c. (for export), at 6½c.

Prices, with comparisons at the close of preceding weeks, were last evening:

	Nov. 30.	*Dec. 7.*	*Dec. 14.*	*Dec. 21.*	Dec. 28.
Certifi's, crude	1.16⅜	1.15⅝	1.14⅜	1.13	1.13¼
Refined, 70°	9	9	9¼	9¼	9¼
Crude, in bbls	7¾@8¼	7⅝@8⅛	7⅝@8⅛	7⅝@8⅛	7⅝@8
Case, plain	10¾	10¾	11	11	11
Naphtha	6	6⅛	6¼	6¼	6½

The export of petroleum from the United States, crude equivalent, for the week ending December 22,

was 9,853,128 gallons, against 12,286,002 in the preceding week. The total export from the United States since January 1 was 628,981,926 gallons, against 602,585,027 gallons in the corresponding portion of 1882, a gain in the current year of 26,396,899 gallons, or 628,500 barrels, as compared with the exports in 1882 from January 1 to December 22. The exports from New York, for the week ended December 22, amounted to 5,788,059 gallons, and for the year from January 1 to December 22, 510,041,812 gallons, against 475,362,893 gallons in a corresponding portion of 1882, showing a net increase from New York alone of 34,678,919 gallons exported between January 1 and December 22, 1883, or 825,600 barrels, as compared with a like period last year.

OCEAN FREIGHTS.

The market has been very dull for freights during the week. Exports of wheat and corn have fallen away. Those of refined oil have been restricted by the attitude of refiners, who are not entertaining bids at all. The demand for charters at New York, Philadelphia, Boston and elsewhere has, therefore, been quiet. There has, however, been some demand for vessels to load with cotton at the south, the increasing receipts of that commodity at the ports encouraging its removal. The number of charters in port has not been large, but the demand has been proportionately so much smaller that rates have suffered. Little is expected to be doing in this line until after the opening of the new year. Rates in the berth line have sympathized with charters, 1½d. per bushel having been accepted for grain to Liverpool, the lowest rate of the year. The noteworthy feature in ocean freights is the departure made in exporting petroleum in barrels, per steamer, which has been done within the week from New York for the first time, at a saving of 1 per cent. in insurance on the cargo. There were 10,000 barrels of petroleum shipped by steamer to Fiume, at the head of the Adriatic, in Italy. Wooden sailers have heretofore monopolized this trade. The New York Maritime Exchange is to send to Congress a memorial recommending the adopting of the following measures for the relief of the shipping interest: The abolition of consular fees; the establishment of a department of commerce, including a bureau of navigation; the abolition of national, state and city taxes upon shipping; abolition of the 30c. annual tonnage tax; abolition of advance wages; abolition of three months' extra wages to seamen discharged abroad; construction materials, etc., duty free; ships' stores duty free (out of bond); reasonable allowance for the passage of wrecked sailors; reduction of hospital money from 40c. to 20c.; an apprentice system; provision for slop chests; limit of individual liability of shipowners.

OCEAN FREIGHTS ELSEWHERE.

[By Telegraph to BRADSTREET'S.]

From Philadelphia, Pa.: Arrivals of tonnage continue very light, but there is little or no demand either for grain or oil charters, and other vessels are offered at rather lower rates. The general market closes dull and unsettled.

From Baltimore, Md.: The freight market is reported very dull, and there is no prospect of any improvement at the present.

From Savannah, Ga.: Ocean freights are in excess of the demand.

From Wilmington, N. C.: In freights, foreign, but few vessels are unprovided for.

From New Orleans, La.: Ocean freights are quiet and steady.

BOOTS AND SHOES.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The boot and shoe market is bare of buyers and trade is very quiet, but it will start up again after the holidays. Manufacturers say that they have not much more than half as many orders in hand as at this time last year. The shipment of boots and shoes from Boston during the year foot up some 160,000 cases more than the year previous.

From Cincinnati, Ohio: The boot and shoe industries claim that, notwithstanding the few local failures among manufacturers, the year has been in the main one of reasonable profit to them. They are now making preparations for spring trade.

From Columbus, Ohio: Cold and damp weather has improved boots and shoes very materially, but dealers do not appear over sanguine for a flourishing spring business.

From Chicago, Ill.: Heavy boots and shoes are in good order request. Stocks are not large. Jobbers express satisfaction at the amount of trade.

From Peoria, Ill.: Boot and shoe dealers report a large trade in rubber goods.

From St. Paul, Minn.: Boots and shoes are quiet.

GROCERIES.

[By Telegraph to BRADSTREET'S.]

From St. Paul, Minn.: Groceries are dull, in accord with the season. Sales this year exceed those of last by nearly $3,000,000.

From New Orleans, La.: A large stock of sugar has accumulated, and light receipts make stronger markets. Molasses is dull and dragging; choice is very scarce; crop estimates are still about 200,000 hogsheads. Rice is dull. Coffee is strong and up ½c.

LUMBER.

[By Telegraph to BRADSTREET'S.]

From Minneapolis, Minn.: Lumbermen report plenty of snow in the woods, and gangs of loggers are doing good work. The lumber market is very quiet. While the list prices are no lower, 2 per cent discount from the list price can be obtained by cash buyers.

FISH.

[By Telegraph to BRADSTREET'S.]

From Boston, Mass.: The fish trade is at a standstill, and will probably continue quiet for a week or two more. Prices unchanged.

NAVAL STORES.

[By Telegraph to BRADSTREET'S.]

From Wilmington, N. C.: Spirits of turpentine are lower, but the outlook is improving for holders for an advance. Rosins, tar and crude, are firm.

From Charleston, S. C.: Turpentine is quiet at 30½c. bid. Sales of rosins are small at $1.15 for strained.

From Savannah, Ga.: In naval stores spirits are easier since last advance. No material decline is reported. Rosins having some demand and exporters are taking what is offered at quotations.

TRADE EMBARRASSMENTS.

There were 260 failures in the United States reported to BRADSTREET'S during the past week, 20 less than the preceding week, 18 more than the corresponding week of 1882, and 99 more than the same week of 1881. About 70 per cent. of the failures were those of small traders, whose capital was under $5,000. Compared with the previous week the middle states had 54, a decrease of 9; New England states 21, a decrease of 16; southern states 63, an increase of 12; western states 101, an increase of 5; Pacific states and territories 21, a decrease of 12; Canada and the Provinces 24, a decrease of 9. Among the important firms reported embarrassed were William Carroll & Co., manufacturers of fur and wool hats, Carroll & Co., manufacturers of straw hats, and Higgins & Fowler, soap manufacturers, New York city; Amos D. Smith & Co., cotton goods manufacturers, Providence, and their companies, the Franklin Manufacturing Company, the Groton Manufacturing Company and the Providence Steam Mill; C. A. Coutant & Co., notions, Chicago; H. S. Gilbert & Co., bankers and grain, Ottawa, Ill.; Lamborn & Gray, bankers, Alliance, Ohio. In the principal trades they were as follows: General stores 48; grocers 41; dry goods 17; clothing 12; liquors 12; fancy goods 11; hardware and agricultural implements 9; millinery and straw goods 8; shoes 8; drugs 7; grain and millers 7; jewelry 7; hotels and restaurants 6; furniture 6; bankers and brokers 5; cotton and manufactures 5; hats 5; crockery 4; manufacturers 4; produce and provisions 3; carpenters and builders 3; men's furnishing goods 3.

NEW MARLBORO.—S. W. Wright & Co., general store, are reported embarrassed by indorsing.

TAUNTON.—A. F. Rouse, grocer, has failed.

MICHIGAN.

BAY CITY.—Kate Danenbaum, dry goods, has assigned to Joseph Brechler.

CLARION.—A. J. Batchelder, general store, has assigned.

CLARION.—Van Saw & McRae, grocers, have assigned.

CORUNNA.—J. W. Knight & Son, harness, have had execution issued against them for $1,400. Liabilities $2,000; stock $1,000.

GRAND RAPIDS.—Kinney, McGraw & Co., tinners, have assigned. Liabilities $5,000; assets $2,000.

IONIA.—M. A. Rodman, jeweler, has assigned to J. F. Webber.

ROCKFORD.—John J. Ely, dry goods, is offering to compromise.

THREE RIVERS.—The Three Rivers Manufacturing Company, mill machinery, is advertised to be sold out on a judgment for $10,000. It was organized in 1872, with an authorized capital of $50,000, of which $36,000 was paid in.

MINNESOTA.

CROOKSTON.—William Guse, saloon, has assigned. Liabilities $1,900; assets $1,585.

CROOKSTON.—Lambert & Mathews, furniture, have assigned.

CROOKSTON.—M. M. Van Giesen, drugs, is asking an extension.

ST. PAUL.—M. G. Oaks, grocer, is dead and the creditors took possession of the stock.

ST. PAUL.—H. E. Mann, dry goods, has assigned to James E. Owens. Liabilities $50,000; assets $40,000.

MISSISSIPPI.

COLDWATER.—H. (Mrs. P.) Meyers, general store, has assigned to H. Teutor. Liabilities $6,000; assets $2,600.

DUCK HILL.—J. H. & F. L. Wall, general store, have been attached for $5,000. They owe about $12,000.

VICKSBURG.—John Pichetto & Brothers, fruits, have assigned.

MISSOURI.

BOONVILLE.—Herman Cohen, clothing, is reported to have been closed by the sheriff. Liabilities about $13,000.

CENTRALIA.—Sexton Brothers & Co., dry goods and groceries, have failed and sold out.

CUBA.—Dyas & Watkins, general store, have called a meeting of creditors.

KANSAS CITY.—The Western Can Company has given a bill of sale to preferred creditors. Liabilities $4,545; nominal assets about $7,000.

MEMPHIS.—Givens & Church, drugs, have failed.

MEMPHIS.—Payne & Kutzner Brothers, grocers, have failed.

MEMPHIS.—Wise, Penny & Co., grocers, have failed.

POPLAR BLUFF.—Walker & Moore, clothing and shoes, have been attached.

ST. LOUIS.—Jacob Brillemann, clothing, has assigned to P. R. Flitcraft. Assets $1,244.

ST. LOUIS.—Corby Brothers, stoves, have called a meeting of creditors.

MONTANA.

DILLON.—The liabilities of Kirkpatrick Brothers, general store, are $70,000; actual assets $35,000 to $40,000; preferences $39,000.

MARTINSDALE.—A receiver has been appointed for R. H. Clendennin, general store. He was attached by H. C. Tillinghast, of Chicago, for $20,000, who claims that he had an interest in this business, which Mr. Clendennin denies, stating that he bought out Mr. Tillinghast's interest, giving notes which are not yet due.

NEBRASKA.

COLUMBUS.—R. Stewart, livery, has been attached.

ORD.—The liabilities of Stacy, Johnson & Co., general store, are about $15,000.

ORD.—B. C. White, general store, shows assets $35,000 and liabilities $22,000. It is thought that creditors will receive a large part of their claims.

TALMAGE.—Frederick Specht, blacksmith, has failed.

TECUMSEH.—A. C. Baxter, jr., jeweler, has failed.

NEVADA.

EUREKA.—J. Cohen, clothing, is advertised to be sold out by the sheriff.

LUNING.—Max Solomon, general store, has sold out, and is reported to have left town.

NEW JERSEY.

NEWARK.—Leonard & Vaughan, hat manufacturers, have failed, and Mr. Leonard has gone to Canada. Assets $100. They are attached for $245.

ORANGE.—Porter, Crofut & Hodgkinson, hat manufacturers, have suspended. Liabilities about $25,000. The business has been established nearly twenty-five years.

NEW MEXICO.

SILVER CITY.—C. P. Crawford, banker, has assigned to I. N. Cohen. Liabilities $300,000; assets $400,000.

NEW YORK.

ALBANY.—Joseph Friedman, furniture, has assigned to Henry E. Sterns.

BATAVIA.—Thomas Delbridge, shoes, has assigned to William Smith, preferring home creditors for $10,000, which will about take all the assets.

BATAVIA.—M. E. Elderkin, millinery, has assigned.

BINGHAMTON.—F. J. Conklin & Co., cigars, have assigned to Henry G. Jackson, with preferences for $6,300. Liabilities estimated at $12,000.

BRASHER FALLS.—Albert B. Rolfe, general store, has assigned to S. W. Ryan. Liabilities estimated at $5,000.

BROOKLYN.—Sarah E. Decker, millinery, assigned on the 22d inst. to Walter L. Darack, giving preferences for $1,452.

BROOKLYN.—Philip Frey, toys, has assigned to Christian Berg, with preferences for $867.

BROOKLYN.—Seymour S. Hoyt, salt fish, assigned on the 22d inst. to John I. Brooks, giving preferences for $3,000. He began July 18, 1882.

DUNKIRK.—John A. Staph, jeweler, has assigned. He allowed notes for $1,500 to go to protest.

FORESTVILLE.—W. D. York & Son, general store, have assigned.

GENEVA.—John Murphy, grocer, has failed.

JAMESTOWN.—C. L. Jeffords, ax manufacturer, has assigned to F. E. Sessions. He is also of Jeffords, Bailey & Co.

JAMESTOWN.—Jeffords, Bailey & Co., manufacturers of lounges, have assigned to J. B. Fisher. They were burnt out December 7; insured for $10,000.

JOHNSTOWN.—Hildebrant & Collins, grocers, have assigned to F. W. Potter, with preferences for about $1,500.

LITTLE FALLS.—C. H. Lindsey, agricultural implements, has assigned.

MATTEAWAN.—Melvin E. Clearwater, miller, has assigned to John J. Monell.

NEW YORK CITY.—The schedules of John H. Allwood, men's furnishing goods, show liabilities $3,372; nominal assets, $2,441; actual assets, $978.

NEW YORK CITY.—R. B. Ball & Co., tea packers, assigned on the 24th inst. to James Day, giving two preferences for $155. They succeeded Ball & Wittenberg September 16.

NEW YORK CITY.—C. S. Benham, mining stock broker, left for San Francisco about ten days ago. On the 26th inst. default was made on his contracts, and some mining stocks were sold out under the rule for his account. It is said he owes the members of the New York Mining Exchange over $40,000 on these contracts.

NEW YORK CITY.—H. Frisbie Burchard, cattle commission, assigned on the 26th inst. to Edgar Swain, giving preferences to the executrix of the estate of S. E. Swain $3,000; Julia R. Norwood $2,000; Catharine A. Burchard $650; total $5,650.

NEW YORK CITY.—Donald Cameron & Co., wholesale provisions, have suspended because of their inability to sell their bills of exchange. Liabilities about $15,000. The business was started in 1873. They have been attached by the Export Lumber Company.

NEW YORK CITY.—William Carroll and his wife, Grace Carroll, composing the firm of William Carroll & Co., manufacturers of fur and wool hats, assigned on the 27th inst. to George N. Smalley, giving a preference to Edward Carroll for $21,280. William Carroll, trading as Carroll & Co., manufacturers of straw hats, made another assignment to Mr. Smalley, The two firms were carried on separately. In the latter Fred. Butterfield was a special partner for $100,000 to February 15, 1884; he died in June last, but his interest remained in the firm. Mr. Carroll had the contract for convict labor at Sing Sing and Clinton prisons from March, 1878, to March, 1883, since which time the legislature abolished such labor. He built a factory at Matteawan last summer at a cost of $25,000, mortgaged for $21,000. The failure is attributed to inability to obtain money on notes to meet maturing obligations of $60,000, dull trade, depreciation and the decision of the executors of the estate of Fred. Butterfield not to renew the special capital. The liabilities of the two firms are reported from $200,000 to $250,000, with nominal assets in excess. Mr. Carroll gave a mortgage on the 17th inst. to Mrs. Butterfield for $25,000.

NEW YORK CITY.—Alexander Fields, suits and cloaks, assigned to William B. Jordan, giving preferences for $8,608, of which $4,976 was to H. B. Claflin & Co. He began last April, having previously been in the dry goods business. Pressure by creditors and dull trade are ascribed as the causes of the assignment.

NEW YORK CITY.—Samuel W. Freund, fancy goods, assigned on the 26th inst. to Isaac Trisdorfer.

NEW YORK CITY.—Genet & Silver, lumber and railroad supplies, assigned on the 28th, with preferences for $9,459. They dissolved October 15, turning over their affairs to John T. Underhill to liquidate.

NEW YORK CITY.—Frederick Hanfield, restaurant, assigned on the 26th inst. to Louis G. Cassidy, giving five preferences for $2,034. Liabilities about $2,500.

NEW YORK CITY.—Higgins & Fowler, soap manufacturers, assigned on the 28th inst. to Alfred W. Lewis, giving preferences to Alfred W. Lewis $5,000; Annie E. Higgins $2,000; George W. Vanderhoven $1,000; S. Lathrop Fowler $1,000; William Brett $1,500; Peter C. Cornell $1,500; J. V. D. Benton $300; John Fenton's Sons $250; total $12,550. They succeeded Higgins Brothers & Fowler December 13, 1881, Mr. Higgins having been in the business twenty years, and in November last claimed a net capital of $50,000 in the business, with liabilities not over $12,000, and that Mr. Higgins had outside means $35,000. The liabilities are reported at about $30,000, and assets less than that sum. The failure is attributed partly to dull business.

NEW YORK CITY.—The schedules of John La Farge, artist and decorator, show liabilities $46,641; nominal assets $42,526; actual assets $2,108.

NEW YORK CITY.—The schedules of May & Mayer, wholesale cloths, show direct liabilities $151,252 and contingent $24,947; nominal assets, $212,435; actual assets, $124,131.

NEW YORK CITY.—The schedules of S. M. Meyenberg & Co., silks, show liabilities $225,859; nominal assets $250,659; actual assets $184,288.

NEW YORK CITY.—The schedules of Louis Noot, laces, show liabilities $28,857; nominal assets $41,177; actual assets $20,536.

NEW YORK CITY.—Rudolph Weise, muldings, assigned on the 28th inst. to Henry G. Keim, with preferences for $13,979.

NEW YORK CITY.—Wright, Gillies & Brother, wholesale coffees and teas, were closed by the sheriff on the 28th inst. on judgments in favor of Emma J. Bent $16,021 and Annie L. Gillies $15,534, and attached by Nash & Dart for $1,800. The judgments are the result of a family quarrel between the two partners. It is alleged that J. W. Gillies sold out the four store buildings for $24,000, and then applied to the courts for a dissolution of the copartnership.

PHELPS.—David White, clothing, has assigned to Hamilton M. Burney.

RONDOUT.—Margaret E. McShane, grocer, has assigned to John Hughes, preferring $600. Liabilities $3,000; actual assets about $1,000.

SPENCERPORT.—L. F. Spencer, coal, has assigned.

SYRACUSE.—Frederick J. Fisher, grocer, has assigned.

TROY.—The schedules of Thomas Devine & Son, crockery, show liabilities $4,395; assets, $2,214.

TROY.—John E. Smith, plumber, has assigned to Edwin A. King.

NEW BERNE.—J. L. McDaniel, grocer, has assigned.

NEW BERNE.—William Sultan & Co., dry goods, have assigned.

SILVER HILL.—J. M. Prim, general store, has assigned. Liabilities about $1,800; assets nominal.

WHITEVILLE.—Culbreth & Co., general store, have assigned. Liabilities about $1,000.

OHIO.

ALLIANCE.—The Becker Washing Machine Company has assigned to U. S. Weikert.

ALLIANCE.—Lamborn & Gray, bankers, have assigned. The failure is attributed to losses in connection with the Cleveland, Youngstown & Pittsburgh Railroad, drafts for $65,000 for last month's pay-roll, it is said, not having been honored by the managers of the road in New York.

CECIL.—A. V. Simpson, general store, has assigned.

CINCINNATI.—Robert Leslie, men's furnishing goods, has assigned to Howard Douglass.

CIRCLEVILLE.—J. W. Davenport, shoes, has been closed by the sheriff.

COLTON.—J. M. Waterman, general store, has assigned.

FREMONT.—C. F. Pohlman, Jr., has been appointed receiver of David Wagner, dry goods, and it is said Mr. Wagner is offering 50 cents.

INDEPENDENCE.—W. A. Secrist, drugs, has failed.

LEIPSIC.—Webber Brothers & Co., general store, are reported to have failed. Liabilities $5,000; assets $3,000.

MILAN.—George A. Klein, shoes, has assigned.

MOUNT VERNON.—Miss Jennie Fisher, millinery, has assigned to J. D. Ewing.

NEWARK.—J. D. Jones, miller, has been closed by the sheriff.

POWHATAN POINT.—Hofer Brothers, millers, have assigned.

TIOGA.—E. M. & J. S. Field, shoes and sewing machines, have been closed by the sheriff.

WEATHERLY.—John Hines (agent), hotel, has been closed by the sheriff.

RHODE ISLAND.

PAWTUCKET.—Martin Ballou, dry goods, has assigned to F. G. Allen. He was stocked up too heavily, and was crowded by Boston creditors.

PAWTUCKET.—At a meeting of the creditors of Joseph Gagnon, liquors, the statement showed liabilities $18,000 outside of mortgages; assets stock $5,000; good bills receivable $1,000.

PROVIDENCE.—Amos D. Smith & Co., manufacturers of cotton goods, assigned on the 26th inst. to Royal C. Taft, Eugene W. Mason and Francis W. Carpenter. The firm ran the Providence Steam Cotton Manufacturing Company, the Franklin Manufacturing Company, and several other mills, running 87,000 spindles and employing several thousand operatives. Their rating has been low since 1879, as it was known that they were working under a large indebtedness with insufficient capital, and their failure was not a surprise. No accurate statement of their condition has yet been issued, but a rough estimate places the liabilities at $1,500,000, and it is questioned if the actual assets will equal one half that amount. The business was started by Amos D. Smith in 1828, which gradually increased, and he admitted his sons and others to the firm. He died in January, 1877, and the remaining partners, his sons, Amos D. Smith and Francis M. Smith, and Benjamin B. Adams, have since carried on the business. Their manufactures were principally sold through three commission merchants in New York city. The five mills of the firm have been shut down. Ten banks in Providence hold $767,000 of the firm's paper, part of which is secured. The Franklin Manufacturing Company, the Groton Manufacturing Company and the Providence Steam Mill Company have all assigned.

WOONSOCKET.—Thomas W. Carron, grocer, has assigned.

SOUTH CAROLINA.

CHERAW.—M. Rhodes, general store, offers 33 1-3 cents. He sold out to his son for $2,500. Liabilities about $6,000.

COLUMBIA.—William Mitchell & Co., grocers, are in the hands of the sheriff.

MARION.—E. H. Gasque, general store, has compromised at 50 cents, one-half cash and one-half in notes, without security, at one year. Liabilities $45,000; nominal assets $77,000.

TENNESSEE

COLUMBIA.—H. C. Gross, dry goods, has assigned. Liabilities $13,000; assets $7,000.

ERIN.—S. A. Brigham, grocer, has assigned. Liabilities $3,500. Assets 2,700.

HUMPHREYS.—Carnell Brothers & Co., general store, who were recently burnt out, offer 50 cents. Liabilities $10,106; nominal assets $8,000; actual assets $4,200.

MEMPHIS.—Daniel Schloss, dry goods, has assigned to S. L. Gibson. Liabilities $5,000; assets $4,300.

MILAN.—A. B. Conley, general store, has been attached.

MILAN.—A. Jordan, dry goods, has been attached.

NASHVILLE.—The assets of S. Jacobus & Brother, dry goods, are about $15,000.

NASHVILLE.—Wolf Traube, general store, has assigned. Liabilities $11,865; assets $3,492.

PARIS.—J. A. Kirkwood, general store, has assigned. Liabilities $12,000; assets $3,500.

TEXAS.

AUSTIN.—Charles Hoffheintz, grocer, has assigned.

CAT SPRINGS.—Hassler & Kinkler, general store, have been attached.

CLARKSVILLE.—C. O. Hodge, saloon, has been attached.

HENDERSON.—A. C. Buckner, dry goods, has been attached.

This company is now prepared to cable and equip existing street railroads, and has by charter all the powers and privileges of a Railroad Rolling Stock and Construction Company.

It has the *exclusive* right to grant licenses under the Hallidie and other patents which are so successfully operated in Chicago and San Francisco

These patents have been twice broadly sustained in the United States Circuit Court as commanding the "CABLE SYSTEM," and in full confidence that the other Federal courts will unhesitatingly follow the opinion of that court, this company will prosecute to the full extent of the law all infringements.

INVESTORS desiring to interest themselves in the stock of this company can obtain full particulars by applying at the office.

The promoters in the syndicate for carrying out the objects of the company, in addition to the Trustees, include the following parties:

C. C. BALDWIN. CHARLES M. FRY.
N. Y. STEAM CO. Hon. WM. DORSHEIMER.
WILLIAM R. TRAVERS. JOHN J. O'BRIEN.

BRADSTREET'S:

A Journal of Trade, Finance, and Public Economy.

PUBLISHED BY THE BRADSTREET COMPANY,
279, 281, 283 BROADWAY, NEW YORK.

Terms, $5.00 *per year in advance, including postage.*
SINGLE COPIES, TEN CENTS.
SPECIMEN COPIES WILL BE SENT FREE UPON APPLICATION.

As a financial and commercial newspaper the foremost purpose of BRADSTREET'S is to be of practical service to business men.
Its special trade and industrial reports; its weekly epitome of bankruptcies throughout the United States and Canada, and the summaries of assets and liabilities, are alone worth the subscription price.
The synopses of recent legal decisions constitute an exceedingly valuable feature.
As commercial transactions, in the wider sense, are coming to be more and more conducted on a statistical basis, the information contained in BRADSTREET'S is of the first importance both to producers and middle men.
THE TRADE AND AGRICULTURAL SITUATION THROUGHOUT THE UNITED STATES AND CANADA IS REPORTED BY TELEGRAPH TO BRADSTREET'S UP TO THE HOUR OF PUBLICATION.

FINANCIAL.
